Functions of the Department of Labour

Labour Gazette.—The monthly publication of the "Labour Gazette" containing a review of the industrial situation throughout Canada, a record of proceedings under the Industrial Disputes Investigation Act, statistics of wages and hours, wholesale and retail prices in Canada, and other countries, strikes and lock-outs, industrial accidents, summaries of laws and legal decisions affecting labour and other information on current matters of industrial and labour interest.

Labour Statistics and Information.—The collection, compilation and publication of statistics of wages, hours, prices, cost of living, strikes and lock-outs, industrial accidents and industrial agreements; also of reports on labour organization and organization in industry, commerce and the professions; the conduct of investigational and research work bearing on industrial relations and labour conditions; the publication of bulletins of information on these subjects.

Industrial Disputes Investigation Act, 1907.—The administration of the Industrial Disputes Investigation Act, Chap. 113, R.S.C., 1927, which provides for the establishment of Boards of Conciliation and Investigation in cases of disputes affecting mines and public utilities.

Conciliation.—The administration of the Conciliation Service of the Department is under the Conciliation and Labour Act, R.S.C. 1927. It provides for the maintenance of a staff of officers at various points, including a Chief Conciliation Officer with headquarters at Ottawa, whose services are utilized in the adjustment of labour disputes.

Fair Wages.—The Fair Wages Policy of the Government (which is expressed under the Fair Wages and Hours of Labour Act, 1935, and by Order in Council) calls for the observance on Government contracts for public works of construction, remodelling, repair or demolition, of the wage rates current in the district, provided the same shall be fair and reasonable, and for an eight-hour working day and forty-four hour week; and on Government contracts for the manufacture of interior fittings and of certain classes of supplies, of the wages rates current in the district and current working hours.

Employment Service of Canada.—The administration of the Employment Offices Co-ordination Act, Chap. 57, R.S.C., 1927, under which, in co-operation with various Provincial Governments, free public employment offices are maintained in 66 centres; statistical information relative to employment conditions is also collected and published.

Combines Investigation Act.—The administration of the Combines Investigation Act, Chap. 26, R.S.C., 1927, an Act to provide for the investigation of combines, monopolies, trusts and mergers.

Technical Education.—The administration of the Technical Education Act. Chap. 193, R.S.C., 1927, which provides for grants to the provinces for the purpose of promoting technical education.

Dominion Government Annuities.—The administration of the Government Annuities Act. Chap. 7, R.S.C., 1927, whereby provision may be made for old age by the purchase of annuities by individuals, or associations on behalf of their members, or by employers on behalf of their employees.

Dominion Unemployment Assistance.—The administration of the Unemployment and Agricultural Assistance Act, and previous enactments.

Labour Transference.—The administration of the Farm Employment Plan, Rehabilitation Plan and Supplementary Works Plans.

Youth Training.—The administration of the Youth Training Act, 1939.

Labour Legislation in Canada.—The compilation and publication of reports containing the text of the labour laws of the Dominion and of the Provinces.

Library.—The maintenance of a library of publications on labour and economic subjects.

International Labour Organization (League of Nations).—The collection and transmission of information required by the International Labour Conference and office; correspondence with Federal and Provincial Government departments and with organizations of employers and employees relative thereto; the representation of Canada at the International Labour Conference and on the Governing Body of the International Labour Office.

93442—1

Publications of the Department of Labour

Bound volumes for 1938 and for earlier years are available at $2 each.

Annual Report of the Department of Labour—

An outline of the activities of the Department during the fiscal year ended March 31, 1938. PRICE, 25 cents.

Report of Dominion Commissioner of Unemployment Relief, 1938.

Employment Service of Canada—

Annual Report of the Director. FREE ON APPLICATION.

Dominion Government Annuities—

Annual Report of the Superintendent. Booklets. Table of Rates, etc. FREE ON APPLICATION.

Combines Investigation Act—

Report of Commissioner on Alleged Combine in the Distribution of Fruit and Vegetables in Western Canada. Feb. 18, 1925. PRICE, 20 cents.

Report of Registrar on Alleged Combine Limiting Competition in the Marketing of New Brunswick Potatoes, June 9, 1925. PRICE, 20 cents.

Report of Registrar on Alleged Combine in the Manufacture and Sale of Bread in the City of Montreal, March 25, 1926. PRICE, 10 cents.

Report of Commissioner on Alleged Combine in the Distribution of Fruits and Vegetables Produced in Ontario, July 31, 1926. PRICE, 15 cents.

Interim Report of Registrar on the Proprietary Articles, Trade Association, an alleged Combine of Wholesale and Retail Druggists and Manufacturers, established to fix and maintain Resale Prices of Proprietary Medicines and Toilet Articles, Sept. 6, 1926. PRICE, 10 cents.

Report of Commissioner on the Proprietary Articles Trade Association, Oct. 24, 1927. PRICE, 10 cents.

Report of Commissioner on the Amalgamated Builders' Council and Related Organizations, an alleged Combine of Plumbing and Heating Contractors and others in Ontario, Oct. 31 and Dec. 18, 1929. PRICE, 25 cents.

Report of Commissioner on the Electrical Estimators' Association, an Alleged Combine of Electrical Contractors, in the City of Toronto, October 4, 1930. PRICE, 25 cents.

Report of Registrar on Alleged Combine in the Bread-Baking Industry in Canada, February 5, 1931. PRICE, 25 cents.

Report of Commissioner on Alleged Combine in the Motion Picture Industry in Canada, April 30, 1931. PRICE, 50 cents.

Report of Registrar on Alleged Combine of Tobacco Manufacturers and other buyers of raw leaf tobacco in Ontario, March 4, 1933. PRICE, 25 cents.

Report of Registrar on Alleged Combine in the Importation and Distribution of British Anthracite Coal in Canada, April 21, 1933. PRICE, 25 cents.

Report of Commissioner under Inquiries Act on Anthracite coal, February 3, 1937 PRICE, 25 cents.

Report of Commissioner on Alleged Combine in the Distribution of Tobacco Products in Alberta and elsewhere in Canada, August 31, 1938. PRICE, 25 cents.

Report of Commissioner on Alleged Combine in the Manufacture and Sale of Paperboard Shipping Containers and Related Products, March 14, 1939. PRICE, 25 cents.

Report of Commissioner on Alleged Combine of Wholesalers and Shippers of Fruits and Vegetables in Western Canada, October 31, 1939. PRICE, 25 cents.

Labour Organization in Canada—

Published annually. Contains full information on trade unions, their origin, organization, officers, etc., with outlines of chief events in each year in connection with labour activities. PRICE of each annual edition, 50 cents (1932 edition, 25 cents).

Twelfth Report on Organization in Industry, Commerce and the Professions in Canada, 1937. PRICE, 25 cents.

Technical Education—

Annual Report, FREE ON APPLICATION.
Report of Royal Commission on Technical Education, 1913. (In four parts, Part 3 out of print.) PRICE, 50 cents.

Labour Legislation as existing in Canada on December 31, 1937.

Contains text of Dominion and Provincial labour laws. PRICE, one dollar.
Supplement—Legislation in 1938. PRICE, 25 cents.

The Employment of Children and Young Persons in Canada. (December, 1930). PRICE, 25 cents

Trade Union Law in Canada. (January, 1935.) PRICE, 50 cents.

Report on Wages and Hours of Labour in Canada, 1938. FREE ON APPLICATION.

Report on Prices in Canada and Other Countries, 1938. FREE ON APPLICATION.

Strikes and Lock-outs in Canada and Other Countries, 1938. FREE ON APPLICATION.

Bulletins of Industrial Relations Series:

PRICE, 10 cents each.

No. 1—Joint Councils in Industry.

No. 2—Report of a Conference on Industrial Relations held at Ottawa, February 21-22, 1921.

No. 3—Joint Conference of the Building and Construction Industries in Canada, held at Ottawa. May 3-6, 1921.

No. 4—Employees' Magazines in Canada. OUT OF PRINT.

No. 5—Canada and the International Labour Conference.

No. 6—The International Labour Organization—Laws of Canada bearing on Draft Conventions and Recommendations. OUT OF PRINT.

No. 7—Canadian Railway Board of Adjustment No. 1—Report of Proceedings of Board from September 1, 1920, to September 30, 1923.

No. 8—National Conference regarding Winter Employment in Canada, Sept. 3-4, 1924—Report of Proceedings and Discussion.

No. 9—Canadian Railway Board of Adjustment No. 1—Report of Proceedings of Board from Oct. 1, 1923, to September 30, 1927.

No. 10—Report of Proceedings of Board from Oct. 1, 1927, to September 30, 1930.

No. 11—Government intervention in Labour Disputes in Canada.

No. 12—Canadian Railway Board of Adjustment No. 1—Report of Proceedings of Board from Oct. 1, 1930, to September 30, 1933.

No. 13—Canadian Railway Board of Adjustment No. 1—Report of Proceedings of Board from October 1, 1933, to September 30, 1936.

Report of Judicial Proceedings respecting Constitutional Validity of The Industrial Disputes Investigation Act, 1907, and Amendments of 1910, 1918, 1920.—

PRICE, 50 cents.

Review of Dominion-Provincial Youth Training Programme, FREE ON APPLICATION.

VOLUME XL] JANUARY, 1940 [NUMBER 1

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

EMPLOYMENT at the beginning of December, 1939, showed a seasonal recession, which, however, was much smaller than the average loss indicated between November 1 and December 1 in the experience of the years since 1920. The Dominion Bureau of Statistics tabulated reports from 11,948 employers, whose pay-rolls were reduced from 1,207,149 at the beginning of November to 1,198,266 at December 1, 1939. The index (average 1926=100) declined from 123·6 at the former date, to 122·7 at December 1, as compared with 114·0 at the same date in 1938. At December 1 in preceding years, the index was as follows:—1937, 121·6; 1936, 110·1; 1935, 104·6; 1934, 98·9; 1933, 91·8; 1932, 83·2; 1931, 99·1; 1930, 108·5; 1929, 119·1; 1928, 116·7 and 1927, 108·1. The latest index was the highest December figure reported in any of the nineteen years for which data are available.

Since the decrease in employment was less-than-normal for December 1, the seasonally adjusted index showed an increase, rising from 118·3 at November 1, 1939, to 119·8 at the beginning of December, when it reached its highest level since September 1, 1929.

Unemployment in Trade Unions.—Reports were furnished to the Department of Labour at the beginning of December, 1939, by 1,966 local trade unions, involving a membership of 246,720 persons, 23,940 of whom or a percentage of 9·7 were without employment in comparison with a percentage of 9·0 at the beginning of November and with 13·7 per cent at the beginning of December, 1938.

Employment Office Reports.—Reports received during November, 1939, from the offices of the Employment Service of Canada showed declines from October, 1939, and also from November a year ago. All industrial divisions in the first instance participated in the losses recorded, the largest decline being in construction and maintenance, while under the second comparison, although gains were shown in manufacturing, trade and mining, a very large reduction in farm placements, as well as one of marked proportions in construction and maintenance, were mainly responsible for the net loss recorded. Vacancies in November, 1939, numbered 29,911, applications 70,581 and there were 28,953 placements in regular and casual employment.

Prices.—In retail prices the cost per week of a list of staple foods, fuel and lighting, and rent entering into a family budget was $17.72 at the begininng of December, 1939, as compared with $17.77 for November, 1939; $16.93 for September, 1939; $17.25 for December, 1938; $17.58 for December, 1937; $15.41 for June, 1933 (the low point in recent years); $22.11 for December, 1929; $21.49 for December, 1921; $26.92 for July, 1920 (the post war peak); and $14.26 for December, 1914. The slight decrease in December, 1939, as compared with the previous month was due to the lower cost of foods. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 continued upward week by week throughout December and was 82·2 for the week ended December 29 as compared with 80·2 for the week ended December 1, and 79 for the week ended November 3. The increase in December was due in large part to higher prices for grains, live stock and certain raw textiles. Comparative figures on a monthly basis are 80·3 for November, 1939; 72·4 for August, 1939; 73·3 for December, 1938; 82·7 for December, 1937; 63·5 for February, 1933 (the low point in recent years); 96·0 for December, 1929; 96·4 for December, 1921; 164·3 for May, 1920 (the post war peak); and 66·4 for December, 1914.

Business Statistics.—The table on page 2 gives the latest statistics available reflecting industrial conditions in Canada. The index of the physical volume of business in November was 133·0 as compared with 133·1 for October which was the highest point recorded for the index in any month with the exception of January, 1929. The figure for November, 1939, was 8 per cent higher than in November, 1938. The index of the volume of mineral

* Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† For the week ended December 29, 1939.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending December 30, 1939, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending December 2, November 4 and October 7, 1939; December 3, November 5 and October 8, 1938. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation. (9) Excluding gold.

production was considerably higher in November than in October while manufacturing was lower. In the former group there were important advances in the exports of copper, zinc, and asbestos as well as in mint receipts of gold and in imports of bauxite. Decline was recorded in several of the factors used to indicate the volume of manufacturing the principal being in exports of planks and boards, the production of steel, pig iron and automobiles as well as in imports of crude petroleum. In the other principal groups construction was somewhat lower in November than in October while the output of electric power, and the index of distribution showed advance. In the last named group carloadings, imports and exports were higher while trade employment was slightly lower. All of the principal groups were higher in November, 1939, than in November, 1938, with the exception of construction which was 16 per cent lower. Information available for December shows continued advance in wholesale prices the index being higher than in November and higher also than in December, 1938. Employment, the number of cars of revenue freight, and the gross earnings of the Canadian National Railways were lower than in November but substantially higher than in December, 1938.

Strikes and Lockouts.—The number of strikes and lockouts during December was 11, involving 1,570 workers with time loss of 20,679 man working days, as compared with 15 disputes during November, involving 5,088 workers with 37,381 days' time loss. Disputes of gold miners in British Columbia, coal miners in Saskatchewan, fish handlers in Nova Scotia and knitting and felt factory workers in western Ontario caused most of the time loss recorded for the month. In November most of the time loss was due to disputes involving fish handlers at Lockeport, N.S., coal miners at Springhill, N.S., and at Estevan, Sask., textile factory workers at St. Jerome, P.Q., and gold miners at Pioneer Mines, B.C. In December, 1938, none of the disputes resulted in considerable time loss. There were 8 disputes, involving 267 workers and resulting in 2,230 days' time loss recorded for that month. Of the eleven disputes recorded for December, 1939, ten were terminated during the month, three resulting in favour of the employers and one in favour of the workers involved, compromise settlements being reached in four cases and the results of two disputes being recorded as indefinite. One dispute, involving approximately 140 workers, was recorded as unterminated at the end of December. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or declared terminated by the unions involved.

Registration of skilled and semi-skilled workers in Canada

A conference of Dominion and provincial officials was convened in October on the invitation of the Dominion Minister of Labour, Hon. Norman A. McLarty, for the purpose of determining the policy to be pursued by the Employment Service of Canada in ensuring the maintenance of an adequate supply of skilled and semi-skilled workers for wartime industrial requirements (LABOUR GAZETTE, November 1939, page 1088). It was decided at this meeting that a nation-wide survey should be instituted to determine the availability of such labour.

For this purpose the Employment Service of Canada is conducting in all provinces, with the exception of Ontario, a voluntary registration of skilled and semi-skilled workers whose training and experience qualify them for employment in industries engaged in the production of war materials.

It is now estimated that when all reports are received to December 31, 1939, the number of such workers registered will be close to 10,000, about 250 of this total being women.

The province of Ontario has not as yet commenced this special registration but is ready to do so when the demand for skilled workers would appear to necessitate the registration being made.

At the request of the Department of National Defence, the Employment Service of Canada compiled a registration of former members of the Royal Naval Air Service, the Royal Flying Corps, the Royal Air Force and the Royal Canadian Air Force who are willing to re-engage with the Royal Canadian Air Force as tradesmen. The number of ex-members of the Air Forces who have registered for this employment exceeds 1,000. These applications have all been forwarded to the Department of National Defence.

Statistics of relief recipients for November

The grand total of all classes of persons on urban and agricultural relief across Canada in November last was 582,000, an increase of 6·9 per cent from the month of October. These figures were released recently by the Honourable Norman A. McLarty, Minister of Labour, and are the preliminary results from the registration of all direct relief cases, carried out for the Department of Labour by the provinces and municipalities in November. The grand total for November, 1939, compared with the same month of 1938, showed a decrease of 26 per cent, while compared with November, 1937, the Dominion figure was

down by about one-third: both urban and agricultural relief showed decreases from a year ago. November figures invariably show an increase over October, but this increase in 1939 was less than in previous years. Thus, in 1938 November increased by 22·7 per cent over October, and in 1937 the increase was 9·3 per cent. In 1937 and 1938 both urban and agricultural relief showed increases in November.

Unemployed but fully employable persons on relief in November this year numbered 132,000, an increase of 5·6 per cent from the revised October total, compared to an increase of 15·6 per cent from October, 1938, into the following November. The figure for November this year showed a decrease of 7·8 per cent from November a year ago, and a decrease of 3·1 per cent from November, 1937.

A total of 504,000 persons were receiving non-agricultural relief in November, an increase of 4·1 per cent from the corrected figures for the previous month: November, 1938, had shown a 13·0 per cent increase over October. This category includes all totally unemployable, partially employable and fully employable persons, together with all dependents of family heads. This aggregate showed a decrease of 5·8 per cent from the figure for November, 1938, and a decrease of 1·8 per cent from the figure for November two years ago.

The number of farmers and members of their families in receipt of agricultural relief continued to show a major decline from the year before, reflecting improved crop conditions in Western Canada. A total of 17,000 farmers who, together with their dependents, accounted for a farm population of 78,000 were reported as receiving agricultural relief for subsistence in November. The Dominion total on agricultural relief in November, while up by 29 per cent from the revised October figure, was 69 per cent less than in November, 1938, and over 78 per cent less than in November, 1937. In the Province of Saskatchewan, while November showed an increase of 42 per cent from the reduced total for October this year, it registered a decrease of 77 per cent from November one year ago, and a decrease of 84 per cent from November, 1937. The Saskatchewan total on agricultural relief still represented about two-thirds of the Dominion total.

Dr. W. A. Riddell appointed High Commissioner to New Zealand

On December 29, the Prime Minister, Hon. W. L. Mackenzie King announced the appointment of Hon. John Hall Kelly as Canadian High Commissioner to Eire and Dr. W. A. Riddell as High Commissioner to New Zealand.

Until his recent appointment, Dr. Riddell was attached to the Canadian Legation at Washington as Counsellor, a post to which he was appointed in 1937. Prior to that time he served as Canadian Advisory Officer to the League of Nations for twelve years.

Dr. Riddell was Deputy Minister of Labour of Ontario from 1919 to 1920 when he accepted an appointment on the staff of the International Labour Office in Geneva and five years later was appointed Canadian Advisory Officer to the League of Nations and the International Labour Organization. During his tenure of the latter office he attended successive sessions of the Assembly of the League of Nations, and also acted for Canada on the Council of the League and at numerous international conferences. At the same time Dr. Riddell served continuously on the Governing Body of the International Labour Office as Canadian Government representative and was frequently one of the Government delegates to the sessions of the International Labour Conference. In 1935-36 he was honoured by election to the chairmanship of the Governing Body of the I.L.O.

Recently Dr. Riddell, as the delegate representing the Government of Canada, attended the Conference of American States of the I.L.O. which was held in Havana, Cuba (LABOUR GAZETTE, November 1939, page 1091 and December 1939, page 1239).

Extension of industrial relations policy at Canada Packers Ltd.

The shareholders of Canada Packers, Limited, met on January 3, 1940, to confirm the appointment to their directorate of George J. P. Ayers, an hourly paid employee of the Toronto plant. Mr. Ayers, who has worked for the company for over twenty years, was elected by the ballots of his fellow employees in Toronto with the concurrence of employees in the company's other Canadian plants. It is understood that the appointment will be an annual one, and will be held by representatives chosen by the different plants in turn.

The appointment is an extension of Canada Packers' policy in industrial relations. Several years ago, Plant Relations Committees were formed in all its major plants. They are composed of elected workers and company appointees in the ratio of approximately seven workers to three company appointees. At the Committees' meetings held monthly, or oftener when necessary, many types of problems are discussed including not only those which affect the wages, welfare or comfort of the employees, but also many which have a direct bearing upon the company's success. In spite of differing

views, all important decisions by the Committee have eventualy been adopted unanimously.

Since the formation of the Committees, and principally as a result of their action, the following major improvements in working conditions as well as minor adjustments have been introduced:

(1) Increase in basic hourly wage rates of about 40 per cent, and of average hourly rates of about 25 per cent.
(2) Vacations with pay for hourly workers.
(3) The beginnings of an old age pension scheme.
(4) Bonuses, or "Employees Dividends", which distribute to employees—one-half of the company's annual net profit in excess of 6 per cent on shareholders' equity.
(5) A group insurance scheme, to the support of which both employees and the company contribute. (This scheme like that of the appointment of the employees' director, goes into effect this month).

The duties of the employees' director are still somewhat indefinite, but, it is understood that he will have access to all records of the company, confidential or otherwise. He becomes automatically a member of the various employees' committees and thus will serve as a connecting link between the committees in various plants as well as between those within his own plant. At directors' meetings he will represent the point of view of the hourly paid worker, and while the appointment was primarily made with a view to ensuring that labour's interests are kept sufficiently before the board in formulation of policy, it is anticipated that Mr. Ayers and his successors will contribute useful suggestions for increasing the efficiency of the business upon the success of which depends continuity of employment as well as dividends.

Night work of women telephone operators in Great Britain

The Executive Council of the Union of Post Office Workers in Great Britain was recently informed, by a letter from the Personnel Department of the Post Office, that measures had been taken with regard to the hours of work of telephone staff which involved night work by women operators. A summary of the letter is given below.

In view of the acute shortage of male night telephone staff, the regional directors have been empowered to employ women telephone operators up to 10 or 10.30 p.m., or even later if absolutely necessary, when it is not practicable to provide for the work by other expedients. Volunteers will be employed as far as possible. The duty after 8 p.m. will in most cases be within the 48-hour week, and overtime by women will be restricted to a minimum. The measures are wholly of an emergency nature, and will not be allowed to prejudice in any way the question of the employment of women after 8 p.m. in normal times.

This decision was considered by the Executive Council, which decided to discuss the question with the Post Office with a view to safeguarding the interests of the staff.

Right of requisition in France in wartime

In connection with the Government's right to requisition the services of persons and undertakings—a right that came into existence with the military and civil mobilization—Mr. Charles Pomaret, French Minister of Labour, recently drew up rules governing the rights and obligations of persons affected by a Government requisition order.

The substance of the new rules has been published by the International Labour Office weekly service, *Industrial and Labour Information*, from which the following has been extracted:

The Workers' Obligations.—Persons whose services are requisitioned may not choose their employer nor may they leave their employment without permission. Administrative services are, however, empowered to transfer all such persons to other employment. Persons employed under a requisition order must display care and diligence in their work and furnish the hours demanded of them. Severe measures will be taken against those who fail to observe their obligations. Serious cases, such as sabotage or acts likely to compromise the interests of national defence, may even be referred to the military courts. As a rule however, the worker comes under the authority of the head of the undertaking or under the works regulations.

As dismissal may be contrary to the requirements of war production the employer is entitled to replace it by a deduction from wages which, however, has nothing in common with the fines formerly imposed by employers. Such deductions must be made within fixed limits and according to strict regulations and the proceeds must be paid to the National Solidarity Fund.

Workers' Rights.—Persons who cary out their duties satisfactorily are entitled to the rights laid down in the new regulations. Employers are obliged to observe towards them all the obligations stipulated in existing social legislation and must pay them the usual wages for the post which they hold. Such workers retain the right of appeal to the probiviral courts.

Employers' Obligations.—Although the head of the undertaikng has the usual authority over the persons whose services are requisitioned in the undertaking he cannot exercise it without supervision. He must find employment for persons put at his disposal by a requisition order, who in some cases may be attached officially to the undertaking by order of the public authority.

The war and collective agreements in France

An official statement issued by the French Ministry of Labour on October 13, 1939, points out that the state of war is not in itself a sufficient reason for the termination of contracts of employment. The war has not affected collective agreements concluded between employers' and workers' organizations, and, in the absence of supplementary agreements in the form of additional clauses, all provisions of collective agreements must be fully observed.

In a statement made on October 29, 1939, to the Labour Committee of the Chamber of Deputies, the Minister of Labour gave the assurance that the collective agreement system, which was the keystone of the whole French social structure, would be maintained subject to changes which might be required by unforeseen events.

Subsequently it was declared under a Decree of October 27, that conditions of employment established by collective agreements in force on September 1, 1939, and by arbitration awards which had been made binding by the same date will remain in force throughout the duration of hostilities for employees and workers in the trades and districts included in the scope of such agreements and awards.

Then on November 10 a Legislative Decree fixed the Government's policy in respect of collective agreements and wages, works delegates, employers' obligations towards persons appointed to special work or whose services are requisitioned by the civil authorities, and holidays with pay.

While maintaining the principles of collective agreements and arbitration awards in accordance with the Legislative Decree of October 27, 1939, the new regulations introduce substantial changes in the system of collective agreements as established by the Act of June 24, 1936.

The new Legislative Decree makes provision for the establishment of two different systems applying respectively to industries and undertakings not working for national defence and to those which are so engaged.

In undertakings not engaged on national defence work, the terms of existing collective agreements and arbitration awards may be revised either by mutual arrangement between the organizations concerned or at the request of one of them.

In the absence of such arrangement, the question of revision may be raised if the stipulations of the agreement have been upset by unforeseen events.

In this case the demand for revision is sent to a committee of review composed of a chairman and four members (each having a substitute) appointed by Decree and chosen from active or retired members of important State institutions.

In undertakings engaged on national defence work, conditions of employment—whether or not deriving from collective agreements or arbitration awards—are stabilized as from September 1, 1939. As a result, the average wages paid in each undertaking to workers of the same trade category may not, hours of work and output being equal, exceed the average wages paid in the same undertakings on September 1, 1939.

Those conditions may be modified only by a joint decision of the Minister of Labour and the Minister directly concerned, after consultation with the technical committees referred to above.

In applying these conditions, the committee will pay special attention to the methods used for the calculation of piece rates and average wages.

When labour employed in an undertaking engaged or not engaged in national defence work is transferred from one locality to another, wages will be paid in accordance with the rates in force in the new locality. At the same time, removal allowances may be paid by way of exception to the transferred workers. Similar allowances may also be paid to certain classes of alien labour.

War wage levels and prices in Germany

The International Labour Office publication, *Industrial and Labour Information* has recently published summaries of two sets of administrative orders issued in Germany (Reichsgesetzblatt, 1, No. 206, October 20, 1939)—one to regulate the use of the sums saved by the employer as a result of the fact that certain wage supplements may no longer be paid to the workers, and the other to ensure that wage levels are maintained.

Paragraphs from these summarized regulations are given below:

Wage Supplements.—Administrative regulations issued on October 11, 1939 in application of Part IV (Prices) of the War Economy Order stipulate that the employer must pay to the Treasury the sums corresponding to extra pay which, under the provisions of the Order of September 4, 1939, is no longer paid for overtime, Sunday work, work on holidays and night work. When it is too complicated to establish the exact amounts saved by such reductions of wages, the employer may agree with the taxation authorities to make a single lump-sum payment in lieu.

The price-fixing Commissioner or a department chosen by him may exempt the employer from this obligation if, in a given case, payment would lead to a rise in prices. Similarly, the employers' obligation ceases when the savings made on wages are used to lower prices in

accordance with instructions from the price-fixing Commissioner.

Prohibition to raise wages.—It is forbidden for employers to raise existing wage or salary rates, including those for remuneration paid to home workers, or any other form of regular earnings or to increase the workers 'income by means of allowances.

Any such wage increases are lawful only if they are authorized by legislative provisions, collective rules, service regulations issued, or approved for a public service by a Minister of the Reich, establishment regulations approved for a given establishment by the competent labour trustee or by a decision of the labour trustee.

As to piece work, duly established and applied rates may not be changed in the workers' favour. New rates must be definitely established as soon as the basis of calculation has been carefully determined, so that the remuneration paid to the worker after the necessary period of adaptation will not be higher than the rates usually paid in the undertaking for the same class of work. The rate must be revised immediately the basis of calculation changes.

This rule applies also to the fixing of bonuses.

In these cases also the labour trustee may authorize exceptions.

Prohibition to reduce wages.—The reduction of wages is prohibited in the same conditions and subject to the same reservations as those governing the raising of wages. Unless he obtains prior authorization to do so, the employer may not reduce wage or salary rates, reduce regular earnings or change to the workers' detriment existing piece rates based on past experience.

This rule must not, however, be allowed to affect the principle that wages not justified by the value of the worker's output may be reduced with the authorization or on the order of the competent labour trustee.

Penalties.—All infringements of the above provisions entail the application of the penalties laid down for breaches of the provisions of the Order itself (unlimited fines or, in serious cases, imprisonment and penal serviture).

Consumer Expenditures Survey in U.S.A.

The United States National Resources Committee has issued a report dealing with "Consumer Expenditures in the United States Estimates for 1935-36" (Price 50 cents from the Superintendent of Documents, Washington, D.C.).

The report sketches the broad outline of consumer expenditures in the United States. The results contained in the report form part of a larger study of consumption demands in relation to productive resources undertaken by the National Resources Committee. The first report from this study showed the magnitude of consumer income and how the total income is divided among the various groups of the population in 1935-36. The present report shows how these incomes were used by consumers in the United States—how much was spent for food, clothing, housing, and other major classes of consumer goods and services, how much was paid out as gifts and as certain personal taxes, and how much was saved.

Of particular significance is the finding that the largest outlay was for food accounting for 29 per cent of the total national income in the United States. Housing came second in order of outlay, taking about 16 per cent of the income; household operation followed with 9 per cent; clothing almost the same as household operation i.e. 9 per cent.

Automobile expenditure, it is interesting to note, reached fifth place, almost 6·5 per cent of the total consumer income being given to "the family car" and only 1·5 per cent to all other modes of transportation.

The total amount spent on medical care was slightly less than 4 per cent of the total family and individual income. This outlay did not include expenditures made by public and private agencies supplying free medical services to part of the population. Expenditures for recreation were next in order followed by personal care, tobacco and reading.

Except for a few miscellaneous items accounting for about $300 million of the national income in the United States, education showed the smallest outlay on the list, just over $500 million or less than one per cent of consumer income. As in the case of medical care however this estimate only represents that portion of the consumer income spent directly by families, it being pointed out that almost five-sixths of the cost of education during 1935-36 was met through public and private schools. The one-sixth paid for from personal incomes covered school books and supplies for all of the population and tuition at private schools and special lessons for the more well-to-do groups.

Nearly 4 per cent of the national income was expended for gifts to relatives and friends and for contributions to church and philanthropic agencies, and about 1·5 per cent was paid out as income taxes, poll taxes, and certain minor property taxes. The report shows that 10 per cent of the total income was put into savings.

93442—2

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

DURING the month of December Boards of Conciliation and Investigation were established by the Minister of Labour under the provisions of the Industrial Disputes Investigation Act to deal with the following disputes:—

(1) Between the Algoma Steel Corporation, Ltd., and 2,435 employees being members of the Algoma Steel Workers' Union (LABOUR GAZETTE, December, 1939, page 1207). The dispute in this case relates to the employees' request for a general increase in wage rates. The personnel of the board is as follows: His Honour Judge A. H. Dowler, of Port Arthur, Ont., chairman, appointed by the Minister of Labour on the joint recommendation of the other board members, Mr. Lynn B. Spencer, K.C., of Welland, Ont., nominated by the company, and Mr. W. F. O'Connor, K.C., of Ottawa, Ont., nominated by the men.

(2) Between the Toronto Terminals Railway Company and 67 "Red Cap" messengers employed at the Toronto railway terminal (LABOUR GAZETTE, October, 1939, page 978). The request of the "Red Cap" messengers to negotiate an agreement with the Toronto Terminals Railway Company respecting wages and working conditions is stated to be the cause of the dispute. Board members have been appointed as follows: on the employees' recommendation, Mr. Arthur W. Roebuck, K.C., of Toronto, Ont.; on the company's recommendation, Mr. Victor A. Sinclair, K.C., also of Toronto. Messrs. Roebuck and Sinclair will confer looking to a joint recommendation for the third member, who will be chairman of the board.

It was reported in the December issue of the LABOUR GAZETTE, page 1207, that an application for a board had been received from employees of the City Engineer's and Waterworks Departments of the City of Edmonton, members of the Civic Employees' Federal Union No. 30. During December the Western Representative of the Department held conferences in Edmonton with representatives of the civic administration and of the union concerned, and agreement was reached as to the procedure to be followed in disposing of the existing differences respecting labour conditions. It was also arranged that the employees' request for wage increases would be submitted to the City Council for consideration when dealing with the 1940 estimates during the months of February and March. The Department of Labour was requested by the applicants to withhold action in the meantime looking to the establishment of a board.

As a result of departmental mediation arrangements have been made for the re-opening of negotiations between the Canadian National Railways and its cartage service employees at St. Hyacinthe, Montreal, Brantford, London and Guelph, members of the Canadian Brotherhood of Railway Employees, and pending the outcome of these negotiations the application received last month for the establishment of a board (LABOUR GAZETTE, December, 1939, page 1207) will be held in abeyance.

There appeared in the issue of the LABOUR GAZETTE for December, 1939, page 1217, the text of the report of the Board of Conciliation and Investigation which dealt recently with a wages dispute between the Hull Electric Company and its employees being members of Division 591, Amalgamated Association of Street and Electric Railway and Motor Coach Employees of America. The members of the board were the Honourable Mr. Justice Lucien Cannon, chairman, Mr. H. P. Hill, K.C., the company's nominee, and Mr. Alexandre Tache, K.C., the men's nominee. The Department has been advised that the unanimous recommendation of the board that wage rates be increased three cents per hour from October 15, 1939, has been accepted by both parties to the dispute and has been put into effect.

The text of the findings of the Board of Conciliation and Investigation which dealt with a dispute between various coal operators at Bienfait in the Estevan district of Saskatchewan and their coal miners appeared in the LABOUR GAZETTE for August, 1939, at page 782. The board's report was signed by the chairman, Professor A. R. Creig, and the member nominated by the men, Mr. Angus J. Morrison. Mr. B. D. Hogarth, the board member nominated by the companies, submitted a minority report. The coal operators refused to carry out the recommendations of the board and mining operations ceased in the collieries of four operating companies on October 16 as a result of a strike declared by the United Mine Workers of America. For details of the strike and information in regard to the settlement reached on December 8 see the articles on Strikes and Lockouts appearing in the issues of the LABOUR GAZETTE for November and December, 1939, and in the present issue.

CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM OCTOBER 1, 1939, TO DECEMBER 31, 1939

CONCILIATION proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

The following statement covers the more important conciliation matters dealt with during the period October 1, 1939, to December 31, 1939. (An article covering the period July 1, 1939, to September 30, 1939, appeared in the LABOUR GAZETTE, October, 1939, page 987).

DECK OFFICERS, CANADIAN PACIFIC STEAMSHIPS, LTD. (TRANS-PACIFIC SERVICE), VANCOUVER, B.C.—The July, 1939, issue of the LABOUR GAZETTE, at page 656, carried a reference to a dispute between the Canadian Pacific Steamships, Limited (Trans-Pacific Service), and its deck officers, members of the Canadian Merchant Service Guild, respecting a union agreement covering increased rates of pay and adjustments in leave conditions. Through the efforts of the conciliation officer who dealt with the case, a conference took place late in August between the Guild's negotiating committee and the General Superintendent of the Steamship Company, with the result that a number of matters in dispute were disposed of satisfactorily. The General Superintendent, however, stated that the Company was not prepared to sign an agreement with the Guild although it was quite willing to meet at any time a committee representing its own employees. Later, claiming that conditions of employment would be altered as a result of the war the navigating officers made additional demands, and at the close of December it was stated that if an agreement could not be concluded shortly consideration would be given to requesting Board procedure under the Industrial Disputes Investigation Act.

COAL MINERS, KAYDEE (LUSCAR DISTRICT), ALTA.—On September 21, 1939, a strike occurred at the Kaydee Collieries, Limited, Kaydee, Alta., of coal miners, members of Local Union No. 7478, District 18, United Mine Workers of America. The previous day the Company had discharged, allegedly for creating labour disturbances, 17 employees. On October 12th a conciliator of the Department of Labour held a joint conference with officials of the Company and a representative of the miners as a result of which an agreement was reached providing for the reinstatement of all the men involved. Work was resumed the same day. Thirty miners were affected in this instance.

CLERKS, TORONTO, ONT.—Early in October a complaint was brought to the attention of the Provincial Department of Labour to the effect that Loblaw's Groceterias, Toronto, had dismissed, without notice, three employees who had recently joined the Canadian Retail Employees' Association, affiliated with the All-Canadian Congress of Labour. It was stated that the Company had refused to give the men any reason for this action, and it was therefore contended that discrimination was being shown because of the union membership. In co-operation with the Dominion Department of Labour the matter was investigated. It was ascertained that the Company had sufficient grounds for their action, but early in November, due to extenuating circumstances, they agreed to reinstate one of the men in question, and it was understood that the other two had secured employment elsewhere.

TEXTILE FACTORY WORKERS, ST. JEROME, P.Q.—On October 24, 1939, mill workers, members of the St. Jerome branch of the National Catholic Union of Textile Workers, employed by the Regent Knitting Mills, Limited, St. Jerome, ceased work when their demands for increased wages, reduced working hours and union recognition were refused. Conciliation officers of the Dominion Department of

Labour, working in co-operation with the Mayor of the town and a conciliator of the Provincial Government, endeavoured to find some basis of settlement, and conferences to this end were held with the disputing parties. The Company offered to recognize a shop committee for the purpose of negotiating wages, etc., and stated as well that all strikers would be taken back without discrimination. This offer was not acceptable to the strikers, but the way was paved for further conferences between the parties directly affected. On November 8th the strike was terminated, the Company consenting to recognize the local union but not the parent body. It was also agreed that within a period of three months negotiations for a general wage agreement would be reopened. Approximately 615 employees were affected by the dispute, and it was stated that about 450 of these were members of the union.

SHEET METAL FACTORY WORKERS, TORONTO, ONT.—On November 21, 1939, eight employees of the Trane Company of Canada, Limited, Toronto, members of Local Union No. 1039, Steel Workers' Organizing Committee (C.I.O.), ceased work in protest against the lay-off of 14 men, 12 of whom were union members, which had occurred a few days previously. Representatives of the men alleged that discrimination was being shown because of union membership, and a conference between union representatives and officials of the employing Company on the 20th failed to bring about an understanding, as did a vote taken by the Company to ascertain the view of the majority of their employees in regard to union affiliation, and the strike was called for the following day. At this time the employees requested the assistance of the Department of Labour in the matter. The strikers presented demands for the rehiring, according to seniority, of the men laid off, union recognition and increased wages. The conciliators of the Department who dealt with the case were informed by the Company that the lay-off had been due entirely to a seasonal slackening in business, that a further lay-off in the near future was inevitable, and also that they had had difficulty in obtaining a supply of aluminum. In the meantime a committee of the employees had been elected to deal with grievances. The position of the Company was made known to the union officials, and the strike continued. Later the union reported that the strike had lapsed by the middle of December.

FISH HANDLERS, LOCKEPORT, N.S.—On October 21, 1939, the plants of the Lockeport Cold Storage Company and Swim Brothers, Limited, Lockeport, N.S., closed down following a conference at which the employers refused to recognize the newly formed Fishermen's Union and Fish Handlers' Union, connected with the Canadian Seamen's Union which is affiliated with the Trades and Labour Congress of Canada. It was estimated that approximately 400 fishermen and fish handlers were thus thrown out of employment. Officials of the Provincial Government dealt with the dispute but no settlement was reached. The union made enquiries as to proceedings under the Industrial Disputes Investigation Act, and on November 28th a conciliator of the Dominion Department of Labour arrived at Lockeport to assist in the efforts being made to solve the dispute. His suggestions, however, that the plants be reopened and negotiations resumed or that joint consent be given for Board procedure under the Industrial Disputes Investigation Act were not acceptable, and prolonged conferences with the disputing parties failed to break the deadlock. The plants were picketed, and shipments of fish were prevented. Some violence occurred. Early in December the federal officer discussed the situation with the Premier of Nova Scotia. Subsequently the Premier called a conference of the representatives of the employers and employees and a settlement was reached as outlined in the article on strikes and lockouts appearing elsewhere in this issue.

CARTAGE SERVICE EMPLOYEES, ST. HYACINTHE AND MONTREAL, P.Q., AND BRANTFORD, LONDON AND GUELPH, ONT.—On December 2, 1939, an application was received in the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute between the Canadian National Railways, Express Department, and certain employees in the cartage services at St. Hyacinthe and Montreal, P.Q., and Brantford, London and Guelph, Ont. The employees, being clerks, foremen, despatchers, automobile mechanics, painters, etc., were members of the Canadian Brotherhood of Railway Employees. The application stated that the Company had refused the request of the employees for an agreement covering a general increase in wages and improved working conditions. Following receipt of the application a conciliator of the Department conferred with the General Manager of the Express Department and subsequently made arrangements for further negotiations between the General Manager and the Chairman of the men's negotiating committee. At the end of December the case was still before the Department. The application stated that 310 employees were directly affected by the dispute.

CIVIC EMPLOYEES, EDMONTON, ALTA.—On December 8, 1939, an application was received in the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute between the Corporation of the City of Edmonton and employees in the City Engineer's and Waterworks Departments, being members of Edmonton Civic Employees' Federal Union No. 30. The application was made when efforts of the employees to secure wage increases and the adjustment of certain other grievances failed. With a view to avoiding Board procedure, if possible, a conciliation officer of the Department conferred with representatives of both parties, and as a result the City Commissioners agreed to consider the question of increased wages when the 1940 estimates were being prepared during February and March, and also to investigate and adjust, where possible or practical, the complaints repecting working conditions. The application stated that 265 employees were directly affected by the dispute.

TEXTILE FACTORY WORKERS, BRANTFORD, ONT.—A strike of approximately 430 textile workers employed in the plant of the Watson Manufacturing Company, Limited, Brantford, Ont., received the attention of conciliation officers of the Department during December. On December 1st about 300 girls ceased work to enforce their demand for a 15 per cent wage increase, the payment of time and one-half for all overtime work and also for certain improvements in working conditions. The following day 130 men joined in the strike. Conferences which the conciliators held with the disputing parties failed to bring about a settlement, and in view of the deadlock it was proposed that joint consent be given to the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. Such procedure, however, was not acceptable to the employers. Subsequently officials of the Provincial Government dealt with the matter and secured a settlement whereby work was resumed on January 3rd with a 5 per cent wage increase and time and one-quarter for overtime work.

Ontario Workmen's Compensation Statistics, 1939

According to a statement issued by the Ontario Industrial Accident Prevention Associations there were 60,520 accidents reported to the Workmen's Compensation Board during 1939, compared with 59,834 during 1938. Fatal accidents numbered 314, as against 352 during 1938. Total benefits awarded during the year amounted to $6,152,407.43, compared with $6,464,261.19 during 1938, the figures for 1939 being made up of $5,057,714.23 compensation and $1,094,693.30 medical aid.

There were 5,138 accidents reported during December, and the benefits awarded amounted to $581,378.92. The accidents reported during December a year ago numbered 4,460.

Hospitalization Plan of International Harvester Company

The International Harvester Company, and affiliated companies, has added a hospitalization scheme to its already extensive employee welfare plans which include a vacation plan for factory employees, a pension plan, sickness, and accident plan and death benefit plan.

The hospitalization plan, which became effective January 1, 1940, is available to all members of the Employees' Benefit Association in the employ of the company in the United States and Canada who make application to come under the plan. Prior to February 1, 1940, no physical examination will be required of prospective participants in the scheme, however after that date an applicant will be required to pass a physical examination.

An employee's contribution to the plan is 12 cents per week or 52 cents per month. The Company's contribution to the hospitalization fund is set at 20 per cent of all contributions of the members to the fund.

Benefits under the plan are to be paid only when the member is confined "to a regularly licensed public or private hospital upon the order of a licensed physician or surgeon."

Hospital benefits will be paid to the member at the rate of $4.50 for each day confined in a hospital, limited to 31 days in any one disability, and a reimbursement of expenses for operating room, anaesthetic, X-rays, laboratory expense and dressings up to $30 in any one hospital confinement.

The plan, as outlined in a booklet issued by the Company, provides for certain limitations, and termination of membership.

The administration of the plan is under the control and direction of the Board of Trustees of the Employees' Benefit Association and is to be administered by the superintendent in the same manner as the sickness, accident and death benefit plans.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1939

THE following table shows the number of disputes, workers involved and time loss for December, 1939, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Numbers of employees involved	Time loss in man working days
*Dec. 1939	11	1,570	20,679
*Nov. 1939	15	5,088	37,381
Dec. 1938	8	267	2,230

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded for December was smaller than that for November, the number of workers involved and the time loss incurred showing a corresponding decrease. The figures, however, are higher in all cases than those recorded for the same month a year ago. The disputes causing the greatest time loss during December were those involving gold miners at Pioneer Mines, B.C., coal miners at Estevan, Sask., fish handlers at Lockeport, N.S., knitting factory workers at Brantford, Ont., and felt factory workers at Guelph, Ont. In November also substantial time loss was caused by the first three strikes mentioned above, while disputes involving textile workers at St. Jerome, P.Q., and sheet metal workers in Toronto, Ont., also caused considerable time to be lost. During December, 1938, the only disputes of importance were those involving leather goods workers in Montreal, P.Q., and lime plant workers at Blubber Bay B.C.

Five disputes, involving 789 workers, were carried over from November, one strike recorded as unterminated in the December LABOUR GAZETTE having later been reported to have been settled and work resumed on December 1, namely: men's clothing factory workers, Montreal, P.Q. Six disputes commenced during December. Of these eleven disputes, ten were terminated during the month, three resulting in favour of the employers and one in favour of the workers involved, compromise settlements being reached in four cases and the result of two disputes being recorded as indefinite. At the end of the month, therefore, there was only one strike or lockout recorded as in progress, namely: gold miners, Pioneer Mines, B.C.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to eight such disputes, namely: coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; dairy employees, Toronto, Ont., September 17, 1937, one employer; lithographers, London, Ont., August 31, 1938, one employer; bakers and helpers, Vancouver, B.C., November 11, 1938, one employer; stationary engineers, Toronto, Ont., March 2, 1939, one employer; fur factory workers, Toronto, Ont., October 17, 1939, one employer, and work clothing factory employees, Winnipeg, Man., December 1, 1939, one employer, this last being added to the list this month.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required are not included in the record, no relation of employer and employees being involved.

A dispute affecting one dress factory in Montreal, P.Q., about December 28, has been reported. The International Ladies' Garment Workers' Union picketed the establishment when the proprietor refused to employ its members or recognize the union. As there were no union workers employed none went on strike and there was no stoppage of work.

A dispute involving printing compositors, etc., employed in one daily newspaper office at Montreal has been reported. The agreement with the International Typographical Union effective until December 31 was not renewed and the members of that union were replaced by members of the National Catholic Union of Printers.

A number of retail stores under one management in Montreal have been picketed since November 20 following the dismissal of four employees, alleged by the Retail Clerks' Protective Union to be as a result of membership in the union, but claimed by the employer to be for personal reasons and to reduce overhead. About the middle of December the employer applied for an injunction against the

picketing and the proceedings were adjourned after some evidence was taken.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress prior to December

Gold Miners, Pioneer Mines, B.C.—During December the mine was still closed, following the partial reopening for a few days in November when the strikers refused to resume operations and continued picketing. Later in the month efforts to bring about further negotiations were made but a settlement was not reached.

Coal Miners, Estevan, Sask.—As stated in the December issue of the Labour Gazette a settlement of this dispute was reached on December 8 and work was resumed, beginning on December 11, as a result of a conference of the parties involved with provincial government representatives. It was arranged that a new union would be formed, the United Mine Workers of America, affiliated with the Congress of Industrial Organizations, and the Saskatchewan Mine Workers' Union, affiliated with the Canadian Federation of Labour, withdrawing from the district for the duration of the war and one year thereafter, except that the employees in a stripping mine operated with steam shovels under an agreement with the Saskatchewan Mine Workers' Union may continue with that organization. The Canadian Federation of Labour representatives, however, undertook to advise them not to do so. An agreement is to be negotiated providing for a minimum of 40 cents per hour for labourers, the recognition of seniority, and the "closed shop". During December a committee of three was appointed to arrange for the new union, consisting of a representative from each of the unions mentioned above and one member appointed by the provincial government.

Coal Miners, Port Hood, N.S.—This strike involving employees in a mine being re-opened, November 23, was settled by a tentative agreement for two weeks as a result of mediation by a member of the provincial legislature, the Speaker, a compromise on wages being reached. It was reported that later an agreement with the United Mine Workers of America would be negotiated. Work was resumed on December 8.

A second stoppage occurred on December 12 against the temporary employment of two officials as labourers, not being members of the union. Work was resumed on the following day when it was agreed that these men would not work until their official positions were ready.

Men's Clothing Factory Workers, Montreal, P.Q.—A large number of the contractors' shops, closed on November 22 to secure an increase in rates from manufacturers, corresponding to a ten per cent increase in wages under a new agreement effective on December 4, had resumed operations on November 23 and others secured the increase in rates later. At the end of November it was reported that twenty per cent of the employees were still involved. In December, however, it was reported that a settlement had been reached and work resumed December 1.

Sheet Metal Workers, Toronto, Ont.—This dispute is reported to have lapsed by the middle of December, all of the employees involved except one having secured work elsewhere.

Fish Handlers, Etc., Lockeport, N.S.—A representative of the Federal Department of Labour visited Lockeport at the end of November and discussed the dispute with the parties involved, outlining the procedure under the Industrial Disputes Investigation Act if both parties would apply for the establishment of a Board, this being necessary as the industry was not connected with mining or public utilities, or to war work to which the Act had been extended under the War Measures Act. Such procedure was definitely rejected by the employers. Proposals for the reopening of the plants with a view to negotiations were also not accepted. The conciliation officer discussed the situation with the Premier of Nova Scotia in Halifax. The employers and municipal authorities requested the provincial authorities to provide additional police protection for fish shipments, which, with the exception of a shipment of fishmeal for overseas, had been held up by the picket since the closing of the plants. Efforts to move the cars of fish against the opposition of a picket of about 600 were finally not pressed but is was reported that legal proceedings were being taken against the leaders. Later the Premier of Nova Scotia held a conference of representatives of the employers and employees at Halifax and a settlement was reached on December 16. The employers agreed to reopen the plants on December 18, the employees to resume work under the conditions prior to the dispute, the right of the employees to organize and bargain collectively under the Nova Scotia Trade Union Act being conceded.

Disputes commencing during December

Coal Miners, Joggins, N.S.—A number of the miners in one colliery ceased work on December 6 in sympathy with one miner in a dispute with another miner as to the use of a shovel, causing the mine to be closed

for that shift. On the following day this dispute was reported to have been settled and the miners returned to work but the management closed the mine pending a decision as to discipline regarding the two men. On December 14 it was arranged that work would be resumed for a week, operations to be continued if a settlement was reached in the meantime. On December 22 the mine was closed down but was re-opened on December 28 under new control of operations.

WORK CLOTHING FACTORY WORKERS, WINNIPEG, MAN.—A number of employees were called out by the United Garment Workers of America on December 1 in one establishment on the refusal of the proprietor to sign the agreement in effect in a large number of other establishments in the city. The employer stated that operations in the shop were not interrupted. The union reported that those on strike secured work elsewhere. This stoppage has been added to the list of such disputes, carried elsewhere in this article, where the union has not declared the dispute terminated although employment conditions are no longer affected.

KNITTING FACTORY WORKERS, BRANTFORD, ONT.—A number of girls in one establishment ceased work on December 1 to secure an increase in wages of fifteen per cent and were joined by most of the male employees on the following day. The employees later organized the Brantford Textile Workers Union, No. 15, chartered by the Trades and Labour Congress of Canada. The employees requested conciliation by the Federal Department of Labour and representatives from the Toronto office reached Brantford on December 9. A settlement was not reached but later, as a result of conciliation by the Minister of Labour for Ontario and the Chief Conciliation Officer, it was agreed that wages would be increased five per cent and that time and one-quarter rates would be paid for overtime. Work was resumed on January 3 and all employees were to be taken back by January 13.

FELT FACTORY WORKERS, GUELPH, ONT.—Employees in one establishment making felt forms for hats, members of the United Hatters, Cap and Millinery Workers' International Union, ceased work on December 8 to secure a closed shop union agreement with increases in wages, reduced hours, etc. As a result of conciliation

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1939*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to December, 1939				
MINING, ETC.—				
Gold miners, Pioneer Mines, B.C.	1	142	3,550	Commenced Oct. 8, 1939; for recognition of union, check-off for union dues and increased wages; unterminated.
Coal miners, Estevan District, Sask.	1	200	1,800	Commenced Oct. 16, 1939; for employment of members of one union only and for signed agreement providing for increased wages and reduced hours; terminated Dec. 9; conciliation (provincial); compromise.
Coal miners, Port Hood, N.S.	1	25	150	Commenced Nov. 23, 1939; for increased wages: terminated Dec. 7; conciliation (provincial); compromise.
MANUFACTURING—				
Textiles, etc.—				
Men's clothing factory workers, Montreal, P.Q.	.....	.....	.....	Commenced Nov. 22, 1939; *re* increase in rates to contractors in accordance with increase in wages: terminated Nov. 30; negotiations; in favour of workers.
Metal Products—				
Sheet metal workers, Toronto, Ont.	1	22	200	Commenced Nov. 21, 1939; *re* alleged lockout of workers because of union membership, and for union recognition, increased wages, etc.; lapsed by Dec. 15; replacement; in favour of employer.
TRADE—				
Fish handlers, etc., Lockeport, N.S.	2	400	5,000	Commenced Oct. 23, 1939; alleged lockout *re* union recognition; terminated Dec. 16; conciliation (provincial); compromise.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1939*—*Concluded*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(b) Strikes and Lockouts commencing during December, 1939				
MINING, ETC.—				
Coal miners, Joggins, N.S..	1	90	600	Commenced Dec. 6; strike and alleged lockout *re* use of tools; terminated Dec. 13; return of workers; indefinite.
Coal miners, Port Hood, N.S.....	1	25	25	Commenced Dec. 12; against temporary employment of two officials as labourers; terminated Dec. 12; negotiations; in favour of workers.
MANUFACTURING—				
Textiles, Clothing, etc.—				
Work clothing factory workers, Winnipeg, Man..	1	3	50	Commenced Dec. 1; for union recognition and agreement providing for union wages, hours, etc.; employment conditions no longer affected by December 15; in favour of employer.
Knitting factory workers, Brantford, Ont.....	1	362	7,500	Commenced Dec. 1; for increased wages; terminated Dec. 27; conciliation (provincial); compromise.
Felt factory workers, Guelph, Ont.....	1	150	1,200	Commenced Dec. 8; for recognition of union and closed shop union agreement providing for increased wages and reduced hours; terminated Dec. 16; conciliation (provincial; indefinite.
CONSTRUCTION—				
Shipbuilding—				
Riveters, ship builders, etc., Saint John, N.B..	1	151	604	Commenced Dec. 19; against change in working conditions (installation of new machine); terminated Dec. 22; return of workers; in favour of employer.

* In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

by officials of the Ontario Department of Labour it was agreed that work would be resumed and negotiations for an agreement entered into, the Ontario Department of Labour to assist if negotiations were not completed by February 1, 1940; any wage adjustments to be retroactive to December 18, all employees to return to the jobs previously filled, no discrimination against any employee for union membership or activity or for not being a member of any union, no strikes, stoppages or lockouts during the negotiations. Work was resumed on December 18.

RIVETERS, SHIP BUILDERS, ETC., SAINT JOHN, N.B.—Certain classes of employees in a shipbuilding and repair establishment ceased work on December 19 in protest against the introduction of a machine for the performance of work hitherto done by caulkers. Those on strike were members of an independent union, the Steel Workers' Union, Local No. 1, and were joined by crane operators and labourers. Machinists, blacksmiths, etc., continued to work. Negotiations for an increase in wages were in progress when the dispute as to the machine occurred. The strikers requested conciliation by the Federal Department of Labour but were informed that it appeared that they were on strike contrary to the provisions of the Industrial Disputes Investigation Act, the provisions of which had been extended to work on war supplies, etc., that work should be resumed immediately and that then conciliation or proceedings under the Act could be initiated. An official of the Department went to Saint John to ascertain the facts and secure, if possible, a resumption of work. Following this inquiry the strikers agreed to resume work on December 23, withdrawing their demands as to the new machine. It was then arranged that the dispute as to wages would be dealt with later.

(Statistics as to strikes and lockouts in Great Britain and other countries are not available for this issue.)

NEW YEAR'S MESSAGES OF DOMINION MINISTER OF LABOUR AND CANADIAN LABOUR LEADERS

Hon. Norman A. McLarty Emphasizes Importance of Good Industrial Relations in Wartime—Labour's Recognition of the Issues Involved Reflected in Co-operative Effort

IN a New Year's message, Hon. Norman A. McLarty, Minister of Labour, stressed the necessity of employer-employee co-operation in the national war effort for the preservation of the democratic way of life. The text of his message is as follows:

"The war clouds which a year ago were sometimes black—sometimes rifted—but always menacing have finally broken; and a democratic, peace-loving country finds its people on the advent of the New Year faced with the stark reality and awful responsibility of being at war. This over-shadowing fact necessarily makes all our national peace-time effort fade into the background; and, for four months now, the effective carrying on of the war effort has been the dominating force that has run through all our action and governed all our national life.

"As soon as possible after war was declared labour made quite clear its position and the extent of its willingness to participate in its successful prosecution. Through its representatives it gave an unequivocal promise of one hundred per cent co-operation. In order that its efforts would be successful and would not be thwarted by a few irresponsible and misguided individuals it asked that the Industrial Disputes Investigation Act be extended to cover all war time industries. In addition, the accredited representatives of labour have been most diligent and most helpful in an endeavour to iron out grievances and disputes which, in less serious times, might have resulted in friction and loss of time and energy through industrial strife.

"It is perhaps too much to hope that there will not be sporadic and local labour disturbances created by the agitation of those who do not really represent labour—but merely themselves—and who feel that their existence will be forgotten unless they can produce some local strife. But the possible act of a few disturbing elements should not make us unmindful of the unanimity with which the Canadian people have engaged in the prosecution of the war; and one of the reasons for this heartening unanimity is the splendid attitude of labour generally.

"In view of the co-operative attitude of labour generally it would be doubly unfortunate if any attempt were made under the guise of the necessities of war to eliminate or reduce those advantages—whether in wages, in hours of labour or in the general standard of living—which have accrued to Canadian labour during the present century. I have no doubt that this will not happen. But it must be admitted that just as labour has its irresponsible agitators, so there are still some—I trust a very few—employers who begrudge each advance which has been made in bettering the conditions of work and living of those who with their families depend upon wages for their daily bread. Both attitudes are equally inimical to Canada's war effort."

Maintenance of Industrial Relations

"It is only fair to say that even without our national emergency there was a growing realization and appreciation of the importance of the belief that industrial life should not be a continuous struggle between capital and labour and that a frank and complete recognition of a partnership basis was the best for both and essential in the maintenance of our industrial structure. This has best been demonstrated by the wide extension of industrial agreements including voluntary plans for co-operation, such as profit-sharing agreements, stock ownership, accident and health insurance for the worker and his family, and various other tangible evidences of the growing realization of the necessity for co-operative effort in industrial organization.

"One of the plans which has shown a remarkably rapid growth is the sale of pension plans issued by the Annuities Branch of the Department of Labour to employers in favour of their employees. This plan has been in effect less than two years and to-day over 10,000 employees are protected. The amount involved in the purchases of these pensions runs into millions of dollars. The plan is designed to the end that a comfortable pension will be provided for employees when they can no longer carry on in their employment.

"But while our major thoughts must necessarily be directed to the effective prosecution of the war, there are two peace-time problems which will require careful and continuous consideration.

"The first of these is the problem of unemployment. While it is doubtless true that this problem will be less acute during the war-time period, those who thought that in the advent of war the problem would be immedi-

ately and automatically solved, were mistaken. There has, it is true, been some reduction. But even when industry has been keyed to the high tempo produced by war activity, there will still remain a substantial number who will depend from time to time upon the State for their support."

Aftermath of War

"The second of these is the problem of the aftermath of war. It is not too early to be giving this our earnest consideration and our most careful thought. The situation which will be created when our Forces on the land, the sea and in the air are required to return to peace-time activities, and when the artificial stimulation of industrial activity created by the scourge of war has been removed, will be a most serious one.

"But the extent of our post war dislocation will be largely governed by the forethought and careful planning that is given to the meeting of this inevitable occurrence—by the avoidance of industrial disputes, by steps taken now to avoid undue inflation, by measures calculated to build up a back log against the emergency, by the sense of confidence we can instil into our Canadian people, by a vigorous and honest prosecution of the war and by the extent to which we can succeed in marshalling the vast resources of Canada with a view to banishing hardships, privation and despair from every home."

Messages of Labour Leaders

In addition to the above from the Minister of Labour, New Year's messages were issued by Canadian Labour leaders. The general trend of these reflected the co-operation of Canadian Labour in the national war effort and its prompt recognition of the vital issues involved. A summary is given below of the chief features of each message:

Mr. Tom Moore, President, Trades and Labour Congress of Canada

Mr. Tom Moore, president of the Trades and Labour Congress of Canada, emphasized the important factor "of the unity of the Canadian people in their determination to support Canada's war efforts until victory is secured." In so doing, he pointed out that it is only under a free democracy that trade unions can successfully operate, and that "it is not surprising therefore that organized labour has sought to render the utmost assistance to the Government in the successful prosecution of the war."

After indicating the direction in which Labour can assist the war effort, Mr. Moore stated:

"While recognizing that first attention must be given to those things essential to winning the war, Labour does not lose sight of the necessity of protecting the 'home front'. Unfortunately the advent of 1940 finds Canada still with several hundred thousands of its citizens dependent upon public aid for their existence. Because of this, it is necessary that Labour's program of social reforms must continue to be vigorously pressed. It is of equal importance that the Democratic liberties of freedom of speech, press and assembly be maintained and only such restrictions imposed as are shown to be absolutely necessary to the safety of the country. The tendency toward making wartime requirements an excuse to establish bureaucratic supervision over all expressions of opinion and reasonable criticism is one that must be checked."

Mr. A. R. Mosher, President, All-Canadian Congress of Labour

Deploring the wastage of war and sounding a hopeful note that in spite of its tragedy "the positive forces in human life will ultimately triumph," Mr. A. R. Mosher, president of the All-Canadian Congress of Labour, declared that "the first essential is that the war be brought to a successful conclusion." He further emphasized this objective thus:

"As our own Prime Minister has said, we do not want to have to fight a war every twenty years. War is now an anachronism, and it is ironic that the immense development of the machinery of production, which might make economic security possible for all mankind, should be utilized to make war more horrible and destructive than ever it has been in the past."

Referring to the aftermath of the war, Mr. Mosher stated:

"The task of reconstruction must therefore be threefold: the establishment of machinery for the adjustment of international disputes and the promotion of human welfare in the widest sense; the perfecting of democratic institutions in every nation, and the provision of economic security within and between the nations. Canada is bound to play an increasingly important role in international affairs, because of her strategic position; Canadian citizens must be eager and willing to take advantage of every opportunity to serve mankind to the fullest extent. I feel that I can speak on behalf of the workers whose unions are associated with the All-Canadian Congress

of Labour in saying that they are ready to do what they can to help build that better world of our hopes and dreams, that world of co-operation and brotherhood and justice which rises in imagination like a mountain-peak above the clouds of war and fear and hate."

MR. W. T. BURFORD, SECRETARY-TREASURER, CANADIAN FEDERATION OF LABOUR

Mr. W. T. Burford, secretary-treasurer of the Canadian Federation of Labour, in commencing his message, declared:

"There is no class difference of interest in the issue of the war; there should be no division of classes in equipping and reinforcing the men who wage it. To gear the economy of Canada for that endeavour is the primary duty of all engaged in industry, finance, and government, and in its fulfilment the workers may be depended upon to exert their utmost in strength and skill."

Discussing the paramount issue of the defeat of Hitlerism, Mr. Burford observes:

"Even yet, the extent to which the war was caused by economic illusions is not generally appreciated. There is more talk of fighting Hitlerism than there is understanding of what that regime means to millions of bemused Germans. With a cult that in various forms and patterns can still claim an enormous following among the workers of all countries, in essence Hitlerdom remains the standard bootstrap millennium. In the discussions of peace terms prematurely being carried on, the fashionable isms are hopefully pushed forward, without recognition of their likeness to the Communazi model. It would be more helpful to peace and freedom if the aimless discussion of peace terms were suspended until the war is won, and if the purveyors of totalitarian panaceas would inform themselves as to the root cause of the attempt of the two Marx brothers, Hitler and Stalin, to extend the realm of state servitude into lands where a free economy is the foundation of the other freedoms."

MR. A. CHARPENTIER, PRESIDENT, CONFEDERATION OF CATHOLIC WORKERS OF CANADA

Stating that "social peace is impossible without social justice," Mr. A. Charpentier, president of the Confederation of Catholic Workers of Canada, declared that whereas the Great War of 1914-1918 was fought to save democracy, the present war is to safeguard christian civilization.

He considered that true social justice is unattainable unless economic dictatorship be broken by means of international agreements based on christian principles, and unless also the policy of industrial relations, of collective agreements and of the promotion of social welfare be fully observed.

Though the war has taken many thousands of youths into war service, he noted that many more thousands remained in the army of the unemployed.

Referring to Dominion measures, Mr. Charpentier considered the policy of price control applied at the very outset of the war to be a favourable indication.

PROVINCIAL LEGISLATIVE PROGRAM OF CONFEDERATION OF CATHOLIC WORKERS OF CANADA

ON December 20, 1939, a delegation from the Confederation of Catholic Workers of Canada submitted a memorandum to the Quebec Government, setting forth that organization's recommendations relative to provincial legislation, based on resolutions adopted at the Confederation's annual convention held in September (LABOUR GAZETTE, October 1939, page 1016).

The delegation was headed by Mr. Alfred Charpentier, general president of the Confederation, and Mr. Gerard Picard, general secretary, and president of the Quebec Central Council.

Among the recommendations of proposed provincial legislation set forth in the memorandum were those concerning the establishment of a Superior Labour Council; the setting up of Labour Courts; substitution of minimum wage legislation for the present Fair Wage Act; unemployment insurance; modification of the Professional Syndicates Act; amendment to the Collective Labour Agreements Act; changes in the Workmen's Compensation Act; the enactment of legislation to prevent employers from unjustly discharging their employees because of union activity; substitution of a system of old age insurance for old age pensions, and reduction of pensionable age to 65; recommending the adoption of legislation to prohibit night and Sunday work in bakeries and pastry shops; the establishment of a system of family allowances along the lines of the recommendations of the Social Insurance Commission in its report of 1932; compulsory arbitration of disputes; double

shifts for fire brigades in municipalities of more than 100,000 population; holidays with pay for all workers.

Amendments were also requested to the Electricians Act and the Engineers and Steamfitters Act. In the former it was suggested that regulations be made more stringent and a distinction drawn between electricians employed in the building industry and others, and to extend the latter statute to municipalities with a population of 5,000 or more. It was also suggested that the statute be amended to permit the employment of one apprentice to every three journeymen.

The following is a more detailed summary of some of the more important recommendations.

Minimum Wages and Minimum Wage Orders

Dealing with the subject of minimum wages, the Confederation's memorandum referred to the provincial Government's reported intention to replace the Fair Wage Act with minimum wage legislation, and to establish a Minimum Wage Board to take the place of the Fair Wage Board.

The Confederation requested that Board Orders be made more simple and comprehensive in the future. The belief was also expressed that the future Minimum Wage Board should have the necessary power to regulate piece and job work in such a manner as to make possible a fair return to workers.

It was also suggested that the Lieutenant-Governor in Council refuse to sanction any order in which the hourly rates of wages were below 35 cents in Montreal, 33 cents in Quebec and 30 cents in the other centres except in the case of apprentices.

The memorandum indicated the Confederation's endorsation of the possible appointment of a woman to the proposed Minimum Wage Board.

Unemployment Insurance

Registering approval of contributory social insurance, the Confederation declared it would be pleased if the Provincial Government would approve the establishment of a national system of unemployment insurance.

Professional Syndicates Act

The Confederation requested a number of amendments to the Professional Syndicates Act, the proposals being, in general, similar to those made in the Confederation's submission to the Provincial Government in February, 1939 (LABOUR GAZETTE, March 1939, page 295). The Confederation also declared its opposition to the enactment of special legislation for the sole purpose of granting legal status to trade unions, trade councils or federations.

Collective Labour Agreements Act

As in the case of the Professional Syndicates Act, the Confederation's memorandum in dealing with the Collective Labour Agreements Act followed closely the submission made by the Confederation to the Provincial Government in February, 1939 (LABOUR GAZETTE, March, 1939, page 293). These proposals included amendment of the definition employer to include contractor, manufacturer or merchant; inclusion in the obligatory provisions of an agreement the fixing of minimum prices for services to consumers; insertion of a clause declaring all Provincial Government works, or works carried on by third parties to be subject to the agreement governing the industry concerned; obligatory posting of a copy of the scale of wages applying to a particular work; requiring certificates of competency from workers governed by an agreement in every muncipality regardless of population; increasing the maximum fee for examination for a certificate of competency from $2 to $5; etc.

Workmen's Compensation Act

The Confederation reiterated its former requests in connection with the operation of the Workmen's Compensation Act, viz.: that the basis for computing benefits for partial and total disability be the hourly wage of the workman at the time of the accident multiplied by 2,400 (300 days of eight hours each) in order to determine the annual wage and that no wage less than 30 cents an hour should be considered; that the Act be amended so that the right to compensation would date from the first day of the accident; that hospitals and other similar institutions be brought under the scope of the Act; that silicosis contracted in such industries as stone and granite cutting and that diseases pertaining to the textile industry be considered as industrial diseases. It was also suggested that the assessment rates for workers of 45 years and over be revised as the present rates are often an obstacle in their obtaining employment.

Old Age Pensions

The Confederation expressed the opinion that the Old Age Pension Act should be made an old age insurance law established on a contributory basis, and that pensions be made payable at 60 years instead of 70 years of age. It was considered that pending the attainment of this objective the Provincial Government should make representations to the Federal

Government that old age pensions be made payable at 65.

Compulsory Arbitration

The Confederation's memorandum also suggested that legislation be enacted establishing compulsory arbitration for the protection of certain classes of employees in public services such as members of fire brigades who have not the right to strike. This request was made conditional upon the establishment of a labour court.

Referring to Bill No. 40 adopted at the last session of the Provincial Legislature providing for the arbitration of disputes between certain charitable institutions and their employees, the Confederation referred to what were considered as certain deficiencies in the legislation.

RECENT REGULATIONS UNDER PROVINCIAL LEGISLATION

Minimum Wages in Alberta, British Columbia and Quebec—Hours of Work, British Columbia—Mines Regulations in Ontario and Quebec—Electrical Work in Quebec

NEW minimum wage regulations in Alberta fix a time limit for the payment of wages. In Quebec there are new orders for the retail food trade in Quebec City and Quebec West and for foundries in Hull, a revision of the order dealing with the manufacture of brick, tiles, etc., and renewal of the orders for laundries in Montreal and for full-fashioned hosiery mills. The by-law of the Quebec Fair Wage Board governing assessment on wages has been revised to apply to all employers in the province except those employing four workers or less. As usual there were special hours and wages orders for shops for the Christmas season in British Columbia. There are new regulations under the Mining Acts of Ontario and Quebec, the latter being a revision and consolidation of the regulations issued to date while in Ontario provision is made for issuance, on medical examination, of the miners' certificates required under the 1939 amendment in the Act to miners employed before June 26, 1939. In Quebec an annual permit must now be obtained by owners of public buildings where electrical work is being done by journeymen electricians paid by the owner.

Alberta Male Minimum Wage Act

Order 9 requires every employer to whom the Act applies, except mine operators, to pay wages within five days after the expiration of each period of employment. No period of employment may exceed one calendar month. When the fifth day has expired the wages are payable on demand and the worker immediately becomes entitled to payment of the wages earned if his employer terminates the employment. These provisions are to prevail over those in any contract of employment. The Mines Act, 1939, requires wages of miners to be paid semi-monthly unless an agreement is made for payment at more frequent intervals.

British Columbia Minimum Wage Acts

The weekly rate of $12.75 which was fixed last year for females employed for at least 40 hours a week or more in shops during the Christmas season is again in effect with the 35 cent hourly rate for those working less than 40 hours.

There is also a special Order for temporary male workers in shops with the same provisions as last year. Adult men are to be paid $15 for a week of 37½ hours or more. For less than 37½ hours the hourly rate is 40 cents with a daily minimum of $1.60. The minimum rates for boys under 21 working the full 37½ hours vary from $6 a week for those under 17 to $13 a week at the age of 20. Boys working part-time must be paid for at least four hours' work. For boys under 17 the minimum hourly rate is 15 cents; it is 20 cents for boys of 17 and under 18 but 25 and 30 cents respectively for boys of 18 and 19 and 35 cents for boys of 20.

British Columbia Hours of Work Act

The temporary exemption of shop assistants from the eight-hour limit imposed by the Act which is allowed for this Christmas season is in some respects wider than last year. Instead of allowing employees to work ten hours on the last two shopping days before Christmas the order permits ten on the second last day and 11 on December 23, in Vancouver, Victoria, Burnaby, Esquimalt, Oak Bay and Saanich, where the usual limit is eight hours. During the week before Christmas, as last year, the hours may be 50 instead of 48 and from December 7 to 31 they may work ten hours a day. For the first time, the 50-hour limit applies this year for the pre-Christmas week to persons employed in mail-order or shipping departments or in delivery by bicycle, motorcycle or on foot. For three years after the Act was passed in 1934 these classes

were allowed to exceed for one week the 48-hour limit which is at other times in effect, but under the Orders for the 1937 and 1938 seasons the regular weekly limit was not relaxed.

Ontario Mining Act

A regulation gazetted on December 2 and issued as a result of the amendments in the Ontario Mining Act in 1939 concerning medical examination of persons employed in mines containing silica dust, makes provision for miners already employed under a certificate of freedom from diseases of the respiratory organs and fit for underground work. Every person who, prior to June 26, 1939, held such a medical certificate, on making application to a medical officer before June 26, 1940, is to be issued a miner's certificate, if on examination the medical officer finds he is free from tuberculosis of the respiratory organs, provided that he has been employed in the mining industry for at least two years and some part of the employment occurred after June 26, 1938.

Quebec Electricians and Electrical Installation Act

Among the changes made by order in council, gazetted on December 2, in the regulations which came into effect on July 1 (LABOUR GAZETTE, September, 1939, p. 909) and retroactive to the date of those regulations is one requiring the owner of a public building in which electrical equipment is being installed or altered, if the work is done by one or more journeymen electricians whose wages are paid by the owner to have an annual permit for each building, the fee varying with the number of men employed. The permit was formerly required to be possessed by owners of buildings employing at least one licensed electrician on a wages or contract basis. The amount paid for the annual permit may still be deducted from the fees paid for installation permits.

Quebec Fair Wage Act

Orders 17 and 19 (LABOUR GAZETTE, 1938, pp. 1351 and 1352) governing respectively laundries, dry cleaning establishments, etc., in Montreal and district and the manufacture of full-fashioned hosiery throughout the province have both been renewed for six months from December 17.

Assessment on Payroll.—An order in council gazetted on December 9 amends the by-law of the Fair Wage Board authorizing a levy of one-third of one per cent on the payroll of certain employers. (LABOUR GAZETTE, July, 1939, p. 677). The restriction in application to employers in cities and towns with a population of 20,000 or more is removed. All employers who had for three consecutive months more than four workers or workers whose wages exceeded $750 for that period must pay an assessment on their payroll but wages to any employee in excess of $200 a month are not to be assessed. Formerly, the by-law exempted wages of $250 or more a month. Employees are to file the names and addresses of their employees and their wages with the Board.

A resolution of the Board gazetted on the same date requires that the levy under this by-law for the first quarter of 1940 is to be paid on or before April 10 and for the subsequent quarter on or before the 10th of the next month.

Retail food trade.—Order 35 applies to trade shops selling food products in Quebec City and Quebec West but it does not apply to hotels, restaurants, lodging houses and ice-cream parlours. It is to be in force for one year from December 16 and renewed for another year unless otherwise decided by the Fair Wage Board or the Lieutenant-Governor in Council. The provisions of Order 4 which are not inconsistent apply to food shops except that workers employed for less than 30 hours a week or three hours a day do not have to be paid at a rate 15 per cent above the minimum fixed for their class. Where wages in effect on December 1, 1938, are higher than those fixed by the order, they may not be reduced except with permission from the Board or where the reduced wages are at least $200 per month.

Managers of retail food shops have a minimum hourly rate of 35 cents, messengers, drivers and helpers, 10 cents, watchmen 25 cents and office workers 22½, if male, and 20 cents, if female. Of the other workers, not less than 20 per cent must be paid at least 30 cents an hour, not more than 30 per cent, 25 cents, not more than 25 per cent, 20 cents and not more than 25 per cent, 15 cents an hour. These numbers in each class are to be established according to a table of percentage issued by the Board and gazetted with the order on November 25. Part-time or extra workers hired for less than two days a week or from November 1 to December 31 or for any period determined by the Board, must be paid at least 20 cents an hour or if they work for more than 30 hours in a week, 15 cents an hour.

The rates apply to a 60-hour week except from December 15 to December 31 and for watchmen and for employees earning at least $21 a week when they apply to a 72-hour week. Subject to the exemptions provided in Order 4, time in excess of the specified hours must

be paid for at the rate of time and a half. Work on Sunday and on New Year's Day, Epiphany, Ascension, Labour Day, All Saints' Day, Immaculate Conception, Christmas Day and St. John the Baptist's Day is prohibited except in case of necessity and for watchmen and persons taking care of horses or attending to the heating.

In addition to the deductions from wages permitted by Order 4, the employer may deduct up to one-half the worker's wage each week for money advanced or for goods sold by the employer to the employee.

Foundries in Hull.—Order 36 applies to all persons employed in foundries in the City of Hull but does not include workers engaged in foundry operations incidental to any other business carried on outside foundries. The order came into force on November 25 and is to remain in force for twelve months when it is to be renewed for another year unless otherwise ordered by the Board or the Lieutenant-Governor in Council.

With the exception of the 15 per cent increase over the regular rate provided by Order 4 for employees working less than 30 hours a week or for not more than three hours a day and the exemption from overtime rates of office workers working overtime through their own fault, negligence or incompetence, the provisions of Order 4 which are not inconsistent are to apply. The clause of Order 4 prohibiting the lowering of wages higher than the legal minima which were in effect at a fixed date except with permission of the Board or where the reduced wage is at least $200 per month applies in this case to all rates in effect on September 1. A skilled man working at more than one operation is entitled to the wage rate fixed for each job for every hour or fraction of an hour he is engaged on it.

Millwrights, machine and electric furnace operators, electric and acetylene welders, machinists, coremakers, bench moulders and moulders have a minimum of 50 cents an hour and ball forgers 45 cents. For the first six months electric furnace helpers, shake-out men, chippers, grinders, moulder and coremaker helpers, cranemen, sand blast operators, sand mixers, straightening hammer operators, ball moulders, assistant pattern-makers and drivers must be paid at least 35 cents an hour and thereafter 40 cents. Yardmen, labourers and employees not otherwise classified have a minimum of 32 cents for the first six months and 35 cents thereafter. The minimum rate for office employees is 22½ cents an hour and for messengers 10 cents an hour. Foremen, electricians and pattern-makers must be paid a minimum of $33 a week.

Apprentices include all those between 16 and 21 years of age learning the trade of coremaker, machinist, moulder, pattern-maker or electrician. They are limited to one for every journeyman electrician and to one for every five journeymen in the other trades. Apprentices are entitled to at least 16 cents an hour for the first year, 20 cents for the second year, 25 cents for the third and 31 cents for the fourth year after which they become journeymen.

The rates apply to a 10-hour day and 50-hour week and overtime in excess of these hours must be paid for at the rate of time and one-half in the case of foremen, office workers, messengers, electricians and pattern-makers and at the regular rate increased by 16 cents an hour for all others, except watchmen, whether working by the hour or by the piece. All workers, including watchmen, must be paid double time for work on Sundays, New Year's Day, Epiphany, Good Friday, Dominion Day, Labour Day, Immaculate Conception and Christmas Day. Overtime rates need not be paid to labourers, yardmen and general workers not otherwise classified who are employed by the week and earn $25 per week or to any other workers hired by the week and earning $33 per week if, in such cases, the workers are granted one week's holiday and four weeks' sick leave with pay each year.

Manufacture of Bricks, Building Blocks and Tiles.—Revised Order 22 governing establishments whose main business is the manufacture of bricks, building blocks and tiles was gazetted on December 16 to remain in force for one year from January 6, 1940, and be renewable for another. Instead of the province being divided into two zones as under the original order (LABOUR GAZETTE, February, 1939, p. 157), there are now three, Zone I continuing to comprise the cities of Montreal and Quebec and the area within a ten-mile radius with the remainder of the province, formerly one zone, being divided into two, Zone II including municipalities (other than those in Zone I) with a population over 10,000 and Zone III the rest of the province. All establishments with six employees or less are now subject to the wages and conditions laid down for Zone III. Instead of rates being fixed for all the various occupations there are now just four categories: messengers, office employees, part time employees and all not in these classes. Part time or "temporary" employees are employees other than messengers and office workers who are engaged for not more than 20 hours a week or for any other period determined by the Board.

All but messengers, office employees and part time workers are to be classified and at least 10 per cent paid 40 cents, 36 cents and 33

cents an hour depending on the zone and not more than the following percentages to receive these rates: 20 per cent, 35 cents, 32 cents and 28 cents; 40 per cent, 30 cents, 26 cents and 23 cents; 20 per cent, 25 cents, 22 cents and 18 cents and 10 per cent, 20 cents, 18 cents and 15 cents. Messengers in the first two zones have a 15 cent rate with 10 cents an hour in the outlying districts. Office workers in Montreal are to be paid $12 a week, in Quebec City and other towns $10. Employees in plant offices in the cities of Montreal and Quebec are to receive $12 a week, in Zone II $10, and in Zone III $8. The weekly wage of office workers may not be reduced for legal or civic holidays or if business hours are shorter than those specified in the order. Wage-rates in effect by agreement on September 1, 1939, are to govern if higher than provided by this order. The hourly rate for part time employees in Montreal and Quebec is 30 cents, in other municipalities with a population over 10,000, 26 cents; elsewhere it is 23 cents. Stationary enginemen in Montreal and district as before are under Order 6 but where it does not apply they are governed by this order.

The minimum rates apply to a 60-hour week except in the case of office employees in a city or town when they apply to a week of 48 hours and in the case of watchmen, dryers and kiln firemen who work 84 hours. Hours worked beyond the specified number must be paid for at one and one-half times the usual rate. The weekly rest days provided for all workers may, in the case of watchmen, dryers and kiln firemen, be made up by as many holidays during the year. As under the former order, an employer may deduct from wages the rent for houses leased to his employees.

Amendment in Order 4.—An amendment of December 16 in Order 4 annuls the provision which has been in effect since May 15, 1938, that the town of Levis was to be considered in Zone III instead of Zone II to which it belonged under the order as originally drawn up.

Quebec Mining Act

New regulations to protect, the safety and health of mine and quarry workers were approved by order in council on November 8 but those governing the use of electricity are the same as before. Any of the regulations may be suspended by the Director of the Bureau of Mines in special circumstances and on the recommendation of a mining inspector. The more important changes are indicated below.

To prevent accidents from falling materials all underground parts of mine workings and the sides and walls of pits and trenches must be freed of loose rocks and stones. In drawing ore and other material from storage places care must be taken to ensure that the material is settling freely above, and where there is a hang-up no person is to go above the draw-point except to free the hang-up, in which case not less than two men are to work together with suitable life-lines or ladders. Workings are to be suitably timbered, cased or lined, or otherwise made secure. Head sheaves are to be of a diameter suitable to the rope in use and are to be carried on a shaft and bearings properly proportioned. No person may ride on a loaded bucket. Clearly marked refuges are to be slashed in the walls of the drift at intervals of less than 100 feet. It continues to be forbidden to drill into the bottom of drill holes from blasting operations and a new provision stipulates that before drilling is begun the exposed face must be carefully examined and washed, special attention being given to old bottoms. Another new section requires employees, before removing any valves or parts of pipe which may be under pressure, to satisfy themselves that the pressure has been shut off and relieved.

For the prevention of fire and explosions, blacksmith or drill-sharpening shops must be at least 50 feet from the shaft house, and all shaft houses must have adequate fire-extinguishing apparatus conveniently located and conspicuously marked. Only the person handling them is to travel in a skip or bucket loaded with explosives, pipe, drill steel, rails or timber, all of which are to be securely fastened. Except for the usual miner's carbide lamp no acetylene generator may be taken underground. Oxygen cylinders are to be kept upright in a well-ventilated and dry place and separate from acetylene cylinders or other inflammable or explosive materials. Both types of cylinders must be sent to the surface when exhausted and must not be permitted to come in contact with any source of direct heat. Cyanide is not to be stored or transported so that there is danger of its coming into contact with any acid substance. When a locomotive is used to transport explosives a car must separate it from the one in which they are contained. No defective or leaking explosives may be used. Cartridges may only be primed immediately before use. Steel or iron tools may not be used in any hole containing explosives, but only those made wholly or partly of copper, brass, aluminum or another metal or alloy approved by the inspector. In addition to a properly constructed electric torch or electric lantern, electric lighting may be used in a magazine provided the wiring is in an armoured or rigid conduit

permanently grounded with screwed waterproof joints.

The rules covering the operation of hoists have been tightened. Every electrical hoist must have an ammeter so as to show the hoistman the load on the motor and an electrical system must be so arranged that he may reply to signals when men are to be hoisted. Except in the case of shaft sinking, the number of persons authorized to signal hoist movements must be limited to as few as is consistent with safety and economy, and, except for the deckmen and cagemen, written authority is required from the manager or mine superintendent. Every hoist operating at a rope speed of over 900 feet per minute must be equipped with mechanical brakes and automatic safety controls. Another new provision requires that each month a piece of the hoisting rope be cut off at the lower end at least six feet above the attachments. When hoisting had been suspended for repairs or any other purpose for more than two hours, no person was to be raised or lowered until the cage or skip had made one complete trip up and down the working portion of the shaft. The two-hour period has been extended to eight. The provision that when men are lowered the drum of the hoist must be clutched to the engine is amended to make this necessary at all times when men are in the cage or skip.

A special record book is to be kept for ropes used for hoisting ore or men, note being made of the type and construction of each rope in use, including any tests made; the name and address of the manufacturer; the date the rope was put into service and taken out of service and the kind of service; the maximum load to which the rope may be subjected; particulars as to inspection, any alterations made in the rope and any accident to it.

Other provisions relate to sanitation and health. Rubber gloves must be provided for workers handling cyanide salts or solutions and warning signs must indicate danger from harmful substances. Drinking water is to be stored so as to prevent its contamination. All buildings must be well lighted and ventilated and the necessary measures taken to remove noxious gases and dusts. The workers must have facilities for washing and a toilet must be provided for each twenty-five men in any smelter or workshop. Where there are more than ten employed underground in one shift, a well lighted, ventilated and heated dry-house must be furnished at the surface where the men can wash, change and dry their clothes.

Masks approved by the Minister and designed to protect from dust, gas and irritating dangerous fumes must be provided. They must be cleaned daily and renewed when necessary. The masks are to be in charge of and inspected regularly by a competent person appointed by the operator and must be sterilized weekly. Dust masks must be inspected at least monthly and gas masks weekly or whenever the worker reports a defect.

The new regulations also contain first aid provisions. Where there are more than 25 persons employed, suitable stretchers, bandages and other first-aid equipment must be available. When the ordinary number of employees exceeds 50 there is to be a first-aid attendant during working hours.

LABOUR LEGISLATION IN BRITISH COLUMBIA AND PRINCE EDWARD ISLAND IN 1939

British Columbia

THE British Columbia Legislature which met on October 31 and was prorogued on November 29 revised the law relating to semi-monthly payment of wages, passed an Act regulating motor carriers and amended Acts dealing with workmen's compensation, weekly half-holidays, moving-picture machine operators and credit unions.

Semi-Monthly Payment of Wages

The application of the Semi-monthly Payment of Wages Act has been extended from mining, foundries, machine shops, lumbering, ship-building, pulp and paper mills and fishing to which it has applied since 1917 to mining, quarrying, manufacturing, cleaning and repairing, shipbuilding, the generation, transformation and transmission of electricity or any motive power, logging, construction including maintenance, or repair of any building, railway, bridge, telegraphic or telephonic installation or electrical undertaking, gas work, waterways or other work of construction, and the fishing industry. As since 1928, the Act applies also to municipal corporations with respect to their outside employees, but in no case does it apply to any worker earning $2,000 or more under a yearly contract. The Lieutenant-Governor in Council may, by regulations published in *The Gazette*, add to or delete from the schedule listing the industries within the scope of the Act, the whole or any branch of any industry, business, trade or occupation.

Provisions as to payment of wages are unchanged and require employees to be paid at least as often as semi-monthly all wages or salary earned up to a day not more than eight days prior to the date of payment. In mines under the Coal Mines Regulation Act payment must be made not less often than fortnightly and on a Saturday. Workers who for any reason are not paid at the fixed time are entitled to be paid at any time thereafter on demand. Nothing in the Act is to be deemed to prohibit the payment of wages at more frequent intervals than those prescribed, but employers may not, by contract or by any other means, secure exemption from its provisions.

The minimum penalty to which an employer is liable for violation of the Act is now $25 instead of $100 as formerly, the maximum remaining unchanged at $500. A new section provides that, in addition to the penalty, the employer shall, upon conviction, be ordered to pay to each employee all arrears of wages. A further change provides that where an offence is committed by a body corporate with the consent or connivance of a director, manager or other officer, such officer is to be deemed guilty of the offence and liable to be proceeded against and punished accordingly.

Motor Vehicle Operators

The Motor Carrier Act, which will come into force on March 1, 1940, requires motor carriers, that is, operators of motor vehicles for the transportation of passengers or freight, to be licensed by the Public Utilities Commission. Operators of taxicabs used exclusively in one municipality and school buses are excepted. The Commission may, with the approval of the Lieutenant-Governor in Council, make orders governing certain matters including the hours of work of drivers. Such orders may exempt any person or vehicle from the application of any provision of the Act or may limit or vary such application. Employers must notify each employee of any order of the Commission affecting him, by delivering a copy to him or by posting it in a conspicuous place where the duties of such employee are performed

An amendment in the Motor Vehicle Act enables the Commissioner of Provincial Police to prescribe restrictions as to the kind of motor vehicle that may be driven under any chauffeur's licence issued by him.

Workmen's Compensation

Amendments in the Workmen's Compensation Act include a revision of the sections relating to silicosis. The period of residence in British Columbia immediately preceding disablement, and also the aggregate periods of exposure to silica dust in the metal mining industry of the province, necessary before a workman disabled from silicosis or, in case of death from silicosis, the dependants of a workman, are entitled to compensation, are reduced from five years to three. The requirement that the workman must have been employed in the metal mining industry in British Columbia for at least three months in the three years preceding his disablement has been changed to apply to the five years prior to disablement, and the time limit for filing claims for compensation in silicosis cases has been extended from two to five years from the date of leaving the employment causing the disease but the claim must be made within one year after disablement. As formerly, if it is proved that the workman has been exposed to silica dust outside the Province the compensation is to be reduced by the proportion that the period of such exposure bears to the total period of exposure.

Another amendment enables the Workmen's Compensation Board, with the approval of the Lieutenant-Governor in Council, to establish, by means of contributions from its employees and from the Accident Fund, a fund for the payment of superannuation allowances to its employees or of allowances in case of disability or death of its employees and to determine the amount of such allowances and the conditions on which, and the persons to whom, they may be paid. Subject to the same approval the Board may use the Superannuation Fund to purchase superannuation allowances for its employees from the Dominion or Provincial Government or from an insurance company or companies. The cost of administering the Superannuation Fund is to be part of the cost of administering the Act.

Weekly Half-holiday

The Weekly Half-holiday Act was amended to add Boxing Day to the public holidays on which shops are to be closed. In any week in which two or more of such public holidays occur, the provisions of the Act as to a weekly half-holiday are not to apply. The sections were repealed which permitted shops to be kept open until 9.30 p.m. on the Friday before a Saturday half-holiday and which provided that the half-holiday need not be observed in any week in which a public holiday falls. A new section provides that where a municipal council receives an application for a weekly half-holiday by-law, signed by at least three-fourths of the occupiers of shops, other than wholesale or retail stores, the council may pass such a by-law with such variations as it thinks proper, and the closing day need

not be the same day as that fixed for stores. To Schedule I, which enumerates businesses exempt from the Act and empowers the Lieutenant-Governor in Council to exempt any other businesses, was added a clause to enable such conditions as the Lieutenant-Governor in Council deems proper to be imposed on the businesses declared exempt, including the requirement of a weekly half-holiday on a day specified in the Order in Council.

Moving-picture Machine Operators

Changes in the Fire Marshal Act affect the number of projectionists that must be employed in certain classes of moving-picture theatres. Under the authority given by the Act to the Lieutenant-Governor in Council to make regulations for regulating or prohibiting projectionists, an order in council of October 18 stipulated that in a threatre open to the public for more than 40 hours a week there must be two projectionists on duty at the same time, holding the licences required according to the size of the theatre. The amended Act now requires that two projectionists with licences as prescribed in the existing regulations shall be in the projection room when a theatre is open to the public if such theatre has a seating capacity of more than 450 or is open to the public for more than 40 hours in a week. In theatres having a smaller seating capacity and open to the public for less than 40 hours per week there must be one licensed projectionist but the Fire Marshal, if satisfied that the safety of the public requires it, may prohibit the operation of any theatre unless two licensed projectionists are employed at the same time. An appeal may be taken to the Lieutenant-Governor in Council from the decision of the Fire Marshal.

Credit Unions

Several changes were made in the Credit Unions Act of 1938, including the reduction of certain fees and provision for junior members. The certificate of incorporation is no longer required to be gazetted at the expense of the applicants nor is a copy of the constitution and rules, including the certificate of incorporation, required to be furnished to every member at a fee not exceeding 25 cents. Such a copy must, however, be at the office available to members and must be given to any member applying for it and paying such sum as the directors of the union itself prescribe. The fee for registering the original constitution is reduced from $10 to $1. Credit unions are declared exempt from the provisions of the Securities Act. A "junior member" is a person under 16 years of age, who is sponsored by a member and admitted with all the obligations and rights of a member except that of voting or of being a director or a member of the credit or the supervisory committees. A junior member may not, without consent of his sponsor, withdraw from membership or withdraw money on deposit, but where there is difficulty in getting in touch with the sponsor, the Inspector of Credit Unions may give consent.

Bills Not Passed

A number of Bills of labour interest were introduced but failed to pass. A Bill to amend the Industrial Conciliation and Abitration Act, 1937, would have repealed the section, which was amended in 1938, declaring it lawful for employees to bargain collectively with their employer and if the majority of the employees were organized in a trade union on December 7, 1938, to conduct such bargaining through the officers of their trade union and if not organized on that date to conduct the bargaining through representatives elected by a majority vote of the employees affected. The section provides a maximum penalty of $500 for any employer or employees refusing so to bargain. The Bill would have substituted a section declaring it lawful for employees to bargain collectively with their employers and, if either a majority of them or a majority of those in any department were organized in a trade union, to bargain through the officers of the union. If these officers acted as a bargaining agency or applied for a Conciliation Commissioner under the Act, the Minister of Labour was not to have power to determine, of his own motion, whether the union represented a majority of the employees affected, but the onus of proof that it did not do so was to be on the employer who, if he desired such proof, would have been obliged to apply to the Minister, within three days after the filing of the application for a Commissioner, for a secret ballot of the employees concerned. On receipt of an application for a ballot, the Minister would have been required to have one taken within three days plus the time necessary for the Minister's representative to travel to the scene of the dispute.

Bills were also introduced proposing to extend the Semi-monthly Payment of Wages Act to lime quarrying, to permit the check-off system in metal mines for hospital dues, sick and accident fund dues and union fees, and to require proper wash-room accommodation to be provided in connection with any coal mine employing more than 20 persons below ground.

Another Bill would have empowered the Board of Industrial Relations to require employers in any industry or trade to allow holidays with pay to employees in proportion to the length of service.

A Bill to amend the Weekly Half-holiday Act would have permitted shops to remain open on the weekly half-holiday nearest to certain public holidays only with the permission of the Board of Industrial Relations, to be given when the public interest or special circumstances required it.

A Bill to amend the Shops Regulation Act would have made municipal by-laws fixing closing time for shops apply to shops of the class or classes concerned situated in unorganized territory not more than five miles from the boundary of the municipality.

A Bill to amend the Company Towns Regulation Act would have required the Minister of Lands, on receipt of a report by the Lieutenant-Governor in Council that 50 or more persons employed by a company in or about any industrial operation or business were living on lands owned or controlled directly or indirectly by the company, to notify the company of the report and order it to file within 30 days a map or plan showing all roads, streets, etc., opened, maintained, or used by it in the area and all contiguous lands owned, controlled or occupied by it. Unless the company filed conclusive evidence that the report was incorrect, the Lieutenant-Governor in Council was to declare those lands, and any adjoining lands in an area described in the Order, to be a company town within the meaning of the Act and between 10 and 25 per cent of the total area was to be reconveyed to the Crown and offered for sale or lease in convenient lots to persons other than the company or its agents. Such Order once made was not to be revoked until the operation or business affected had been permanently closed.

A proposed amendment in the Residence and Responsibility Act would have struck from the definition of "Social Assistance" aid granted by a private association or agency designated for the purpose by the board of arbitration established under the Act, and would have provided that the residence of a married woman living apart from her husband, who resided in a local area, should be determined as if she were a single adult, that a person removing from one area to another should be granted relief without delay in the latter area, that decisions of the board in cases of dispute should have the same effect as a Court order, and that the board should grant permits of removal in all cases where it appeared that the best interests of the person assisted and his dependants would be served by removal.

Proposed changes in a Bill to amend the Hospital Act would have required the conditions of work of nurses-in-training to be approved by the Lieutenant-Governor in Council and would have enabled any nurse, nurse-in-training or other member of a hospital staff who was suspended or dismissed to appeal to a board consisting of one member chosen by the management, one by the appellant and a third chosen by the other two or, failing their agreement, by the Provincial Secretary.

Resolution

On November 30th, a Resolution was adopted to call the attention of the Dominion and Provincial Governments to the problem of unemployment in British Columbia and in the Dominion and to its probable worsening at the end of the war.

Prince Edward Island

During the session of the Prince Edward Island Legislature, which opened on March 20 and closed on April 20, 1939, the Interpretation Act was brought into line with similar Acts in other provinces by the addition of Labour Day to the list of public holidays.

The Judgment and Execution Act consolidating previous legislation exempts from seizure certain goods and chattels of a debtor, including the tools and implements of his trade or occupation, up to a maximum of $100. The Forest Fires Act empowers police officers, game wardens, magistrates, justices, sheriffs and highway foremen to summon as many men living near a forest fire as are deemed necessary to assist in extinguishing it. Any person neglecting or refusing to obey such summons is liable to a penalty of from $10 to $50 and in default of payment to a prison term of not more than three months.

INDUSTRIAL HEALTH AND EFFICIENCY OF MUNITION WORKERS

Industrial Experience of 1914-18 Reflected in Extensive Surveys on Relativity of Emergency Working Conditions to War Production

UNDER the urgency of war conditions, with the attendant gearing of industry to a sustained production of war requirements, the problem of maintaining health and safety standards in munition plants and allied enterprises becomes of major importance in the national effort.

That the problem impinges directly upon the production of war materials was evidenced in the action of the British Government during the War of 1914-1918. That conflict had been in progress a year when, under the impact of long hours (excessive overtime and seven-day work), and related factors of intensive effort among munition workers, the decrease in production became so marked that in September, 1915, the then Minister of Munitions (Rt. Hon. David Lloyd George) appointed a Health of Munition Workers Committee, the object of which was "To consider and advise on questions of industrial fatigue, hours of labour, and other matters affecting the physical health and physical efficiency of workers in munition factories and workshops." This Committee was under the Chairmanship of Sir George Newman (subsequently Chief Medical Officer of the Ministry of Health), and included representatives of the Home Office Factory Department, the Medical Research Committee, and of Management and Labour. The Committee held frequent meetings, and collected evidence in various large industrial towns in the provinces, as well as in London. Field work was carried out on its behalf by a small number of scientific investigators, and the Committee from time to time published various Memoranda, as well as Interim and Final Reports.

The complete story of that impressive industrial experience is contained in the twenty one memoranda issued by the Committee. These deal with every important aspect of the problem ranging from Sunday labour, employment of women, excessive hours, industrial fatigue and its causes, to industrial canteens and workers' diets. (The reports and memoranda issued by this Committee during the years 1916-18 were reviewed in various issues of the LABOUR GAZETTE during that period).

Allowing for the fact that industrial operations have since progressed in large measure and that new technique and mechanization have eliminated many formerly unsatisfactory conditions and also that new processes and chemical combinations have entered into the manufacture of certain types of explosives and munitions, the basic factors of the relativity of fatigue to increased war production remain in varying degree.

Therefore, in view of the present importance of safety and health as a contributory factor in the efficiency of workers engaged in war industries operating under the pressure of increased production, the experience of the previous war and the findings of research experts in this field will be of more than ordinary interest and value in meeting the potential health problems confronting war industries in the present conflict.

Accordingly the material for this article has been largely drawn from three authoritative sources, viz:—

(1) The final report of the Health of Munition Workers' Committee (Great Britain, published in 1918).

(2) A review appearing in the November issue of Industrial Welfare, the Journal of the Industrial Welfare Society of Great Britain. This review—entitled "Health of Munition Workers," is by H. M. Vernon, M.D., who draws extensively on the reports of the Health of Munition Workers' Committee.

(3) A review—"Occupational Health Hazards in the Munitions Industry"—by Kingsley Kay, M.A., Ph.D., Industrial Hygiene Engineer, Division of Industrial Hygiene, Department of Pensions and National Health.

The problem may be divided into three main aspects viz.: (1) the occupational hazard due to the very nature of the explosives being manufactured; (2) the illnesses resulting from close contact with the substances and ingredients in the manufacture of explosives; (3) the cumulative fatigue resulting from intense concentration and long sustained effort on production requirements.

The first is probably the more obvious, and therefore instinctively develops a more or less protective awareness: the second and third are more insidious in their attack on the individual worker. Accordingly, in this review the emphasis is placed on these last two factors.

Occupational Hazards

In discussing occupational hazards in the munitions industry, Kingsley Kay emphasized that "in the last war, experience of health workers everywhere showed that the rapid increase in production of war products was

accompanied by a staggering increase in occupational diseases which at times threatened to affect the efficiency of the industrial war machine to a significant degree. At that time, new processes and materials were being introduced and much of the difficulty of coping with the health problems which arose was due to inexperience."

Continuing he states:

As a result of the experience of the last war, there is considerable knowledge concerning the occupational diseases of this industry and, hence, we are in a far stronger position with respect to protecting the health of munition workers than were health officials at the commencement of the last war. Nevertheless, because production of munitions in Canada represents a narrow field of industrial activity during time of peace, there will be many of the medical and engineering professions who will have had neither the time nor occasion to become acquainted with this special aspect of public health practice. . .

The hazards in the manufacture of explosives are many and the greatest dangers to workers in this industry are not due so much to the explosive property of the substances which are being manufactured, but rather to the toxicity of the substances to which they are exposed. The important high explosives to-day are nitrated aromatic derivatives, of which 2, 4, 6, trinitrotoluene (TNT). is the most widely used. Modern propellants consist mainly of mixtures of nitroglycerine (glyceryl trinitrate) and nitrocellulose, with the addition of suitable stabilizers. In addition, a number of other nitrated aromatic derivatives are manufactured for use as detonators. All these substances are manufactured by nitration of suitable organic compounds by treatment with a mixture of nitric and sulphuric acids.

One of the great hazards in the manufacture of explosives is exposure to excessive concentrations of nitrogen fumes. The toxicology of the nitrogen oxides is well known and needs no discussion. Some measure of the great toxicity of these oxides is shown by the fact that concentrations of greater than 40 parts per million by volume are considered the maximum allowable by the United States Public Health Service. Furthermore, recent investigations would indicate that a limit of 10 parts per million should be the maximum allowable for continuous exposure. The importance of this hazard can be gained by the fact that Alice Hamilton in a study of 41 explosive plants employing 30,000 workers found 1,389 cases of poisoning due to nitrogen oxides, of which 28 were fatal. Needless to say conditions everywhere have improved since that study was made.

From this premise, he proceeds to discuss the symptoms and safeguards concerning such hazards as: Solvent vapours; Trinitrotoluene poisoning; Nitroglycerine poisoning, etc.

Fatigue, Long Hours and Output

In one of his studies on the health of munition workers, Dr. H. M. Vernon, using largely the surveys and findings of the British Health of Munition Workers' Committee, definitely traces the effect of cumulative fatigue on production.

Cumulative Fatigue

Discussing cumulative fatigue, Dr. Vernon states:

Probably the chief cause of the erroneous attitude adopted by many employers was due to their forgetting or ignoring the effects of cumulative fatigue. Many or most of them knew by first-hand experience that in rush periods it was possible to obtain an increased production by imposing overtime hours on their workpeople, but very few of them had ascertained by direct measurement that the increase of output, so striking in the first week of overtime, rapidly deteriorated, and might sink to *nil* if the overtime were continued for more than a very few weeks. This was owing to the cumulative fatigue effects of the longer hours on the workers, as had been proved over and over again. . .

It may still be urged that the incentive of patriotism will help the workers to overcome the effects of fatigue to some extent, and it cannot be denied that this argument has some weight, at any rate for a time. Unfortunately, the output of munitions may have to be maintained for months and even years, so it is foolish to overstrain the workers in the early stages of the war, if it means a loss of efficiency in the later stages. . .

Another reason given by employers for the retention of long hours of work is that any reduction of hours at once results in lessened output. This contention is quite correct, the reason being that the workers, when on long hours, unconsciously get into the habit of working rather slowly in order to conserve their energies and prevent over-fatigue. When changed over to a shorter working week they continue for a time, to work at their previous speed, but owing to the increase of vigour experienced by them they gradually get into the habit of working at a higher speed. Observations made at munition factories showed that it usually took two to four months for them to work up to the steady output which really corresponded with their capabilities. . .

Relation of Fatigue and Ill-Health to Industrial Efficiency

Under the above heading the Health of Munition Workers' Committee in its final report summarizes its conclusions on this phase of its extensive survey. These conclusion are as follows:

The subject of industrial efficiency in relation to health and fatigue is in large degree one of preventive medicine, a question of physiology and psychology, of sociology and industrial hygiene.

Fatigue is the sum of the results of activity which show themselves in a diminished capacity for doing work. Fatigue may spring from the maintained use of intelligence, the maintenance of steady attention, or the continued use of special senses. When the work is monotonous fatigue may appear in the psychical field; monotony may diminish capacity for work; on the other hand "interest" may increase it.

Fatigue should be detected and its causes dealt with while it is still latent, and before it becomes excessive. The tests of fatigue are diminished output, the failure of concentration as shown in increased accidents and spoiled work, staleness, ill health and lost time.

Without health there is no energy, without energy there is no output. More important

than output is the vigour, strength and vitality of the nation. The conditions essential to the maintenance of health are, first, personal conditions or those favourable to the body itself (e.g., food, fresh air, exercise, warmth and adequate rest), and, secondly, a satisfactory environment (e.g., a safe and sanitary factory, suitable hours of work, good housing accommodation and convenient means of transit).

Hours of Labour

With regard to hours of labour the Committee found that at the beginning of the war —due to a widespread belief that long hours produced a larger output—men, and especially the more highly skilled workers, were frequently employed for as much as 90 hours per week. In January, 1916, the Committee recommended that the working time should be reduced to 65-67 hours per week. For women, the limit prescribed was provisonally restricted to within 60 hours per week (with night employment of girls under 18 limited as far as possible). For boys, it was urged that as far as possible those under 16 should not be employed for more than 60 hours or at night. Two years later the Committee considered that these working limits were still too long and could be further reduced without loss of output.

What the extent of the reduction should be in any particular case, declared the committee, can only be determined after considering a number of factors such as the physical or mental strain of the work, the extent to which the pace of the work is governed by the machine, the factory environment, the physical capacity, the age, sex, and experience of the worker, the suitability of the food taken by the worker, the arrangement of hours of work and conditions outside the factory (e.g., housing and transit).

Sunday Labour and Night Work

Under the above heading, the Committee's findings were, in part, as follows:

At the commencement of the war Sunday labour, especially for men, was widely adopted in the hope of increasing output. The evidence, however, proves conclusively that Sunday labour is unpopular, uneconomical and not productive of increased output. . .

Even for men night work is open to serious objection. It is uneconomical owing to the higher charges for wages, lighting and heating. Lighting is generally inferior and supervision more difficult. Adequate sleep by day is difficult owing to dislocation of ordinary habits or from social causes. Social intercourse and recreation can hardly be obtained except by an undue curtailment of sleep. Continuance of education is generally impracticable. Finally it is unnatural to turn night into day.

Night work for women and girls has been illegal for over 50 years. Although inevitable for adult women under existing conditions it should be stopped as soon as it ceases to be essential. Night work for girls under 16 has now been entirely stopped; for girls between 16 and 18 it has been largely curtailed and should be ended as soon as possible. Night work for boys is only legal in certain continuous processes. It has already been curtailed for boys under 16, and should be altogether stopped.

There is no uniformity of practice as to how long a worker should remain on the night shift at any one time. A week is the commonest period but much depends on the social conditions under which he lives. Investigations suggest that continuous night work is productive of less output than the system under which a worker is engaged on day and night shifts alternately. There is no evidence that the output of a continuous day shift balances this inferiority.

Food and Canteens

The food requirements for industrial efficiency under stress of war are contained in the following recommendations of the Committee.

The requirements of the body for food are largely affected by the amount of physical energy expended in daily work and by the environment of the worker. Growing boys and girls require relatively more food than adults. For the maintenance of industrial efficiency, the worker must have food which is adequate in amount, nutritious, fresh, digestible and appetizing.

Apart from any question of shortage of food supplies many workers do not obtain suitable food owing to domestic difficulties, distance of the home from the factory, night work and ignorance of the need (in the case of women).

Carried food is unsatisfactory owing to the limitation in the kinds of food suitable. Further, the food is necessarily cold and may deteriorate easily. Means of heating up food are useful, but are inadequate because such food loses nutritive value. The heating up of any large number of meals is difficult to do satisfactorily.

The only satisfactory solution of the problem of providing suitable food at low prices for large numbers at convenient times lies in the establishment of industrial canteens. Apart from the suitability of the food provided the essentials for success of a canteen include accessibility, the convenience and attractiveness of the premises, prompt service, convenient hours of opening, and a system of management acceptable to the workers.

At the end of 1917 there were about 840 canteens in munition works and docks. The Committee are strongly impressed with the value of the facilities thus afforded, and are convinced that they have very materially contributed to the maintenance of the health of the worker, to the prevention of a serious breakdown under the strain imposed by war conditions, and to increased efficiency and energy, and corresponding output. Though the need for canteens has been accentuated by war conditions, it is in a large measure a permanent one.

Other factors coming within the scope of the Committee's findings included: The industrial employment of women; Hours of labour; Shifts, Breaks, Spells, Pauses and Holidays; Lost time and incentive; Sickness and ill-health; Injuries and accidents; Special industrial diseases; Cleanliness, ventilation, heating and lighting; Sanitation, washing and cloakrooms; Seats, weights, clothing and drinking water; Welfare supervision for women and girls; Welfare supervision for boys and men; Welfare outside the factory; etc.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA, NOVEMBER, 1939

THE accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on December 1 was 11,948, the employees on their pay-rolls numbering 1,198,266 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for November was 1,966, having an aggregate membership of 246,720 persons, 9·7 per cent of whom were without employment on December 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from 70 centres in which the Employment Service of Canada is situated, showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of December, 1939, as Reported by Employers

Industrial employment at the beginning of December in the years since 1920 has almost invariably shown a contraction, the only exception being December 1, 1933, when there was a slight improvement at that date. The movement at the first of December, 1939, was downward, but the reduction in the personnel of the firms furnishing data was unusually small, the percentage loss being only about a third of that recorded, on the average, at December 1 in the last eighteen years. Statistics were tabulated from 11,948 establishments whose working forces aggregated 1,198,266 at the latest date, compared with 1,207,149 at November 1, 1939; this was a decrease of 8,883, or 0·7 per cent. The crude index (1926=100) declined from 123·6 in the preceding month to 122·7 at the date under review, when it was higher than at any other December 1 of the record; the previous high figures for the year-end were those of 121·6 at December 1, 1937, and 119·1 at December 1, 1929, while the index for that date in 1938 was 114·0.

Since the decline at the beginning of December was decidedly less-than-average in the experience of past years of the record, the index of employment when corrected for seasonal influence showed a considerable increase, rising from 118·3 at November 1, 1939, to 119·8 at the date under review; this figure, which was the same as at November 1, 1937, was otherwise the highest seasonally-adjusted figure since September 1, 1929.

93442—3

In recent years, the crude index, based on the 1926 average as 100, has been as follows at December 1:—1939, 122·7; 1938, 114·0 1937, 121·6; 1936, 110·1; 1935, 104·6; 1934, 98·9; 1933, 91·8; 1932, 83·2; 1931, 99·1; 1930, 108·5; 1929, 119·1; 1928, 116·7 and 1927, 108·1.

Manufacturing showed a small gain at December 1. Although this was slight, it was interesting because the trend has been downward at the beginning of December in sixteen of the preceding eighteen years for which statistics are available. The December 1 index in manufacturing was the highest yet recorded, slightly exceeding the previous maximum of 121·7 at October 1, 1937. The largest gains at the date under review were in textiles and iron and steel, while the greatest contractions were those of a seasonal character in the food and lumber industries.

Among the non-manufacturing classes, transportation, communications, services and construction reported seasonal declines, of which those in the last-named were most pronounced. On the other hand, mining, trade and logging afforded more employment, the improvement in bush work being particularly noteworthy.

The staffs of the 11,173 firms making returns for December 1, 1938, had aggregated 1,096,434, a decline of 0·6 per cent from the preceding month; manufacturing, communications, transportation and construction had then recorded seasonal curtailment, while logging and trade had shown considerable improvement.

A review of employment during the year 1939, will be found elsewhere in this issue.

Employment in Banking and Investment Operations

For some months, statistics of their employment have been collected from banks, trust companies and stock market operators. At the beginning of December, 414 firms and branches in these lines of business reported staffs aggregating 33,397 persons, compared with 33,265 in the preceding month. The addition of these figures to the returns furnished in the manufacturing, logging, mining, transportation, communications, construction, services and trade industries brings the total number of employees included in the December 1 survey of employment to 1,231,663 in 12,362 establishments, and slightly lowers the index of 122·7 in the industries above enumerated, to 122·3; when the employees of the co-operating financial organizations were added to the general figures for November 1, the index was lowered from 123·6 to 123·2. Comparable data for 1938 are not available.

Employment by Economic Areas

In Nova Scotia, New Brunswick and Ontario the trend of employment was upward at December 1; the gain in Ontario was slight, while there was considerable improvement in the other two provinces. In Prince Edward Island, Quebec and the Western Provinces seasonal curtailment was indicated, that in British Columbia being most pronounced. Except in Saskatchewan, industrial activity was generally greater than at the beginning of December of last year. The situation in most provinces was equal to or better than that of December 1, 1937; New Brunswick and Ontario were the exceptions in this comparison.

Maritime Provinces.—In this area, expansion was indicated in lumber and iron and steel manufacturing and in logging, shipping and trade, the increases in bush work being particularly large; on the other hand, food and

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

pulp and paper factories, mining and construction reported contractions, those in the last-named being greatest. Returns were furnished by 840 firms employing 91,090 workers, as against 87,342 at November 1. This gain of 3,748 persons was contra-seasonal in character, the movement having been upward in only three of the eighteen preceding Decembers for which data are available. The index at the latest date, standing at 123·0, was the highest in any month since November 1, 1937, being fractionally above the figure for December 1, 1937, which was the previous maximum for that date in the years since 1920.

At December 1, 1938, the 810 reporting establishments had 80,560 employees, as compared with 82,592 in the preceding month.

Quebec.—Employment in Quebec showed a falling-off, which was slightly below the average loss at the beginning of December in previous years of the record. Statements were received from 2,970 employers of 372,546 persons, or 3,431 fewer than at the first of November. The index declined from 131·5 in the preceding month to 130·3 at December 1, 1939, when it was 8·6 points higher than at the same date in 1938, being also fractionally above the previous December maximum in 1937. Manufacturing reported moderate, contra-seasonal improvement as compared with November 1, 1939; the largest gains were in the iron and steel, textile and chemical divisions, while pulp and paper, lumber, tobacco, clay, glass and stone and some other classes were seasonally slacker. Services and construction and maintenance also released employees, the reductions in the latter being pronounced. On the other hand, logging, trade and shipping recorded increased employment, that in logging being particularly noteworthy. Statistics for the same date in 1938 had been tabulated from 2,810 firms in Quebec with a combined payroll of 344,421 persons; this was a contra-seasonal increase of 5,564 from their November 1, 1938, staffs.

Ontario.—Employment in Ontario showed a small advance at December 1, 1939; the trend at that date in other years of the record has usually been downward. Improvement was noted, on the whole, in manufacturing, largely in the leather, textile, tobacco, non-ferrous metal, electrical apparatus and iron and steel industries; the gains in the last-named were substantial. However, there were contractions in lumber, food, beverage and clay, glass and stone plants and in electric light and power. Among the non-manufacturing industries, logging, metallic ore mining and trade reported increased employment. Transportation and construction, however, showed seasonal curtailment, that in the latter being considerable. The 5,221 employers making returns for December 1, 1939, had a staff of 495,549, compared with 494,877 at the beginning of November. The index, at 124·5, compared favourably with that of 114·4 at the

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

[1] For explanation of term "Relative Weight", see footnote to Table 1.

same date in 1938; the 4,847 establishments whose statistics were then compiled had 448,275 persons on their paylists.

Prairie Provinces.—Seasonal declines were indicated in the Prairie Provinces at the date under review, when the 1,707 co-operating firms reported they had released 5,060 workers, reducing their staffs to 142,173 at December 1; this decrease was smaller than at the same date in any of the four preceding years, and was also rather below the average loss indicated at December 1 in the period, 1921-1938. Retail trade, coal-mining and local transportation and storage showed improvement, mostly seasonal in character; there was also recovery in iron and steel and printing and publishing. Curtailment in the lumber, textile, food and other branches, however, reduced employment in manufacturing as a whole. Steam railway operation and construction and maintenance

also afforded less employment, the losses in personnel in all three branches of the latter being considerable. Industrial activity at the beginning of December was at a higher level than at the same date in any other year since 1930. Data for December 1, 1938, were received from 1,572 establishments with 132,411 employees, compared with 138,326 at the first of November, 1938.

British Columbia.—Further contractions were reported in British Columbia, in accordance with the movement almost invariably noted at the beginning of December in this record of nineteen years. There were gains in building and retail trade, but manufacturing was slacker, chiefly in food and lumber factories; logging, mining, transportation, communications and railway and highway construction also released employees, the losses in the last-named being most pronounced among the non-manufacturing industries. A much smaller decrease had been noted at December 1, 1938, but the index was then several points lower. The 1,210 firms making returns for the date under review had 96,908 employees, as compared with 101,720 in their preceding statement. At December 1, 1938, 1,134 employers had reported a staff of 90,767 persons.

Table I gives index numbers by economic areas.

Employment by Cities

Lessened activity was indicated in Quebec City, Ottawa and Vancouver, but the trend was decidedly upward in Montreal, Toronto, Hamilton, Windsor and Winnipeg. The indexes in Quebec and Windsor were lower than at December 1, 1938, the decline in the latter being fractional; in the other centres above enumerated, however, employment was at a higher level. The situation in Montreal, Toronto, Ottawa, Winnipeg and Vancouver was also better than at December 1, 1937.

Montreal.—There was a considerable gain in the employment afforded in Montreal by the 1,726 co-operating firms, whose staffs were enlarged by 3,187 persons to 175,112 at the beginning of December. Manufacturing on the whole reported improvement; this took place mainly in vegetable food and iron and steel factories. Transportation, road construction and maintenance and trade also afforded more employment. A general decrease had been noted at the same date of last year, and the index of employment was then 6½ points below that of 112·7 at the latest date. The 1,623 establishments furnishing returns for December 1, 1938, had reported 163,574 men and women on their paylists.

Quebec.—Industrial activity in Quebec City showed a moderate decline, according to the 211 employers whose returns were received, and who had 15,392 employees at December 1. There were contractions since November 1, 1939, in manufacturing, mainly in the pulp and paper and iron and steel groups, while trade and construction were rather busier. Little general change had been noted at the beginning of December in 1938, when the index was much higher; statements had then been received from 200 concerns with 16,501 persons on their pay-rolls.

Toronto.—Increases in personnel were recorded in Toronto by the 1,770 co-operating firms, who employed 151,386 workers, as compared with 150,984 at the beginning of November. Trade showed noteworthy improvement, and hotels and restaurants were also more active. Manufacturing as a whole, however, was seasonally dull, the food, textile and electrical apparatus groups reporting the greatest reductions, while iron and steel and some other lines were busier. Among the non-manufacturing industries, construction and transportation were quieter. A general loss had been registered at December 1 of last year, and the index of employment then was nearly nine points lower than that of 117·7 at the latest date. For December 1, 1938, 1,636 establishments had made returns, showing that they employed 137,443 men and women, compared with 138,451 at November 1.

Ottawa.—There was a falling-off in Ottawa, where manufacturing and construction reported moderate curtailment. Trade, however, was seasonally busier. Two hundred and twenty-eight firms recorded a combined pay-roll of 14,817 workers, as against 15,314 in their last report. Employment was at a higher level than at the beginning of December, 1938, although a smaller decline had then been indicated by 214 employers with 14,190 persons on their paylists.

Hamilton.—An important gain was made in Hamilton; an aggregate force of 37,830 employees was reported by the 331 firms furnishing data, an increase of 1,059 over their staffs at November 1. Manufacturing as a whole was much more active, the improvement taking place largely in textile, electrical apparatus and iron and steel plants. Transportation was also slightly busier, while other industries showed little general change. The index, at 116·1, was decidedly higher than at the same date of a year ago, when a loss had been reported by the 310 co-operating establishments, whose pay-rolls aggregated 32,944 men and women.

Windsor.—There was a further expansion in Windsor, mainly in iron and steel works, while other divisions showed little general change. Statements were tabulated from 194 employers with 20,455 workers at the beginning of December, compared with 19,414 in the pre-

ceding month. A gain had also been recorded at December 1, 1938; information had been received from 192 firms with 20,376 employees, while the index was then fractionally higher than at the date under review.

Winnipeg.—Employment showed a further moderate advance in Winnipeg, according to data received from 531 establishments employing 43,916 persons, or 554 more than at November 1. Substantial improvement was recorded in trade, but manufacturing, transportation and construction released employees. The general index, at 100·6, was six points higher than at the same date of last year, when a slight decrease had been reported by the 504 concerns furnishing data, whose working forces had aggregated 40,794.

Vancouver.—Employment in Vancouver was rather quieter, according to 523 employers of 38,089 workers, as compared with 38,483 in the preceding month. Manufacturing showed a falling-off, mainly in food and lumber products, but transportation and trade afforded more employment. A small gain on the whole had been indicated at the beginning of December, 1938, when the 474 co-operating firms had employed 36,031 men and women; the index then was 3·1 points lower than that of 113·7 at the latest date.

Employment by Industries

Manufacturing.—A slightly upward movement was reported at December 1 in manufacturing establishments, 6,478 of which employed 627,261 operatives, compared with 626,821 at November 1. Reflecting this small gain, the index (1926=100) rose from 122·1 at November 1, to 122·2 at December 1, when it was higher than in any other month in the record of nineteen years, slightly exceeding the previous maximum indexes reported in 1929 and 1937. The December 1, 1938, figure was 110·1.

As already pointed out, an advance in manufacturing at December 1 is contra-seasonal, the trend having been downward in sixteen of the eighteen preceding Decembers for which statistics are available. After correction for seasonal movement, the index therefore showed a gain, rising from 210·0 at November 1 to 123·6 at the beginning of December; like the crude index, the seasonally-adjusted figure was then at its maximum for the years since 1920.

Curtailment, largely seasonal in character, was indicated in the food, lumber, clay, glass and stone, pulp and paper, beverage, electric light and power and non-metallic mineral product industries. On the other hand, the trend was upward in the iron and steel, textile, leather, tobacco, non-ferrous metal, electrical apparatus and chemical divisions. The greatest improvement was in iron and steel factories, in which employment was more active than in any other month since June, 1930.

The unadjusted indexes of factory employment (based on the 1926 average as 100), have been as follows at December 1 in recent years:—1939, 122·2; 1938, 110·1; 1937, 116·3; 1936, 107·0; 1935, 101·4; 1934, 91·3; 1933, 84·4; 1932, 80·3; 1931, 89·6; 1930, 100·6; 1929, 112·8; 1928, 112·9 and 1927, 104·3.

For December 1, 1938, 6,217 establishements had furnished statistics showing that they employed a staff of 561,191, compared with 565,527 at the beginning of November. The index, at 110·1, was then some twelve points lower than the figure for the month under review.

Animal Products—Edible.—The production of edible animal foods afforded less employment than at the beginning of November, 1939, there being losses in meat-packing, dairying and fish-preserving. The 305 establishments making returns released 965 persons from their staffs, reducing them to 27,975 at December 1. Although a gain had been recorded at the same date in 1938, employment was then at a lower level.

Leather and Products.—Employment in this industry showed a further gain at the beginning of December, occurring largely in boot and shoe factories, although other branches of the leather trades also reported improvement. Statements were tabulated from 336 manufacturers of leather products, employing 25,932 persons, as compared with 25,397 at November 1. A reduction had been noted at December 1, 1938, when the index was over twenty points lower.

Lumber and Products.—Seasonal curtailment of operations on a smaller scale than at the beginning of December, 1938, took place in this group at the date under review; the shrinkage was principally in rough and dressed lumber mills. Data were received from 950 lumber firms, whose staffs declined from 47,960 workers at November 1 to 45,719 at December 1. The index was higher than at the same date of a year ago.

Plant Products—Edible.—There was a seasonal contraction of 2,494 employees in the 547 vegetable food factories whose returns were received; they reported a combined working force of 42,248 operatives. The decrease took place chiefly in canneries, but flour and cereal mills were also slacker while sugar refineries were decidedly busier. The largest losses, on the whole, were in Ontario. The index of employment at December 1, 1939, was many points above that indicated at the beginning of December, 1938.

Pulp and Paper.—Statements were received from 709 manufacturers in the pulp and paper industry, whose payrolls declined by 526 persons to 70,151 at the beginning of December. Employment was brisker than at the same date in 1938, although a smaller loss had then occurred. Improvement took place at the date under review in printing and publishing establishments, while pulp and paper mills released employees. The largest reductions in personnel were in Quebec.

Rubber Products.—A slightly upward movement was reported in the rubber group. The working forces of the 52 co-operating establishments stood at 14,494, compared with 14,442 at November 1. A small decline had been shown at the corresponding date in 1938, and the level of employment was then lower.

Textile Products.—There was a contra-seasonal advance in employment in these industries; most of this occurred in cotton, woollen, silk and knitting mills, while clothing and headwear factories showed somewhat lowered activity. Returns were compiled from 1,169 manufacturers employing 118,089 workers, or 1,429 more than in the preceding month. A general loss had been recorded at the beginning of December, 1938, when the index was 15·7 points lower.

Tobacco.—Employment in tobacco factories moderately advanced. An aggregate payroll of 8,290 persons was indicated by the 46 co-operating firms, compared with 8,156 at the beginning of November. Large gains had been shown at the same date in 1938, and the index was then much higher than at the date under review.

Beverages.—A considerable decline was indicated in the production of beverages, according to 149 manufacturers with 9,421 employees, compared with 9,887 at November 1. Employment was decidedly more active than at the same date in 1938.

Clay, Glass and Stone Products.—Seasonal reductions occurred in this industry, 535 persons being released by the 222 co-operating manufacturers, who had 10,666 on their payrolls. A downward tendency had also been in evidence at December 1, 1938; the volume of employment then was smaller.

Chemicals and Allied Products.—Improvement was indicated in the chemical group at December 1, according to data received from 319 firms having 21,179 employees, as compared with 20,744 in the preceding month. A loss had been noted at the beginning of December, 1938, when employment was at a much lower level than at the date under review.

Electric Light and Power.—There was a decrease in employment in electric light and power plants, 102 of which had 17,740 employees, or 478 fewer than at November 1. A larger recession had been reported at the beginning of December, 1938, but the index number then was a few points lower.

Electrical Appliances.—A gain was noted in electrical apparatus plants; 125 manufacturers employed 19,020 persons, as compared with 18,884 in their last report. Employment at December 1, 1939, was at a higher level than at the same date in the preceding year, a reduction having then been reported in this industry.

Iron and Steel Products.—There was considerable improvement in employment in iron and steel factories; the foundry and machine shop division reported lowered activity, while automobile and other vehicles, shipbuilding, general machinery, agricultural implements, crude, rolled and forged, and some other plants were decidedly busier. There was an increase of 5,386 in the staffs of the 928 co-operating manufacturers, who employed 146,177. The general level of employment in this group was decidedly higher than at the same date in the preceding year, or of any other year for which statistics are available, except 1928.

Non-Ferrous Metal Products.—An advance took place in this division at the beginning of December, according to data received from 193 employers of 26,631 persons, as compared with 26,385 in the preceding month. The index was higher than at December 1, 1938, a decline having then been registered.

Non-Metallic Mineral Products.—There was a decrease in the manufacture of non-metallic mineral products; 98 firms employed 13,208 workers, or 217 fewer than at the beginning of November. Activity in this group was higher than at December 1, 1938, when a larger loss had been noted.

Logging

Continued advances were shown in logging, in which activity increased in all provinces, except British Columbia. Statements were tabulated from 426 logging camps having 77,591 employees, or 16,811 more than in their last report. This gain was greater than that registered at the same date in 1938, and also exceeded the average increase from November to December in the years since 1920. The index was decidedly higher than at December 1, 1938, although it was lower than at the end of 1937.

Mining

Coal.—Employment in coal mines increased at the beginning of December, 426 persons being added to the payrolls of the 102 co-operating operators, who had 26,298 employees. Most of the improvement was in Alberta. A larger advance had been shown at the corresponding date in 1938, but the index number was then fractionally lower.

Metallic Ores.—There was an increase in employment in metallic ore mines; 101 workers were taken on since November 1 by the 214 employers from whom information was received, and who had 44,147 persons on their pay lists. A reduction had been indicated in December, 1938, when the number on the staffs of the firms reporting in this division was decidedly smaller.

Non-Metallic Minerals other than Coal.—Curtailment in employment was noted in the extraction of non-metallic minerals, other than coal. In these industries, 104 firms furnished data showing that they employed 9,289 persons, as compared with 9,618 at November 1. Activity was greater than in the same month of 1938; a similar loss had then been indicated.

Communications

Decreases in personnel were noted on telegraphs and telephones; 315 persons were released by the co-operating companies and branches, which had 22,833 employees at the date under review. The index was slightly higher than in the early winter of 1938.

Transportation

Street Railways and Cartage.—This division was more active, the largest increase in employment occurring in Saskatchewan. Data were compiled from 295 firms whose staffs rose from 30,787 at November 1, to 31,140 at the beginning of December. This gain compared favourably with the loss recorded at the same date in 1938, when the index was much lower.

Steam Railways.—The trend of employment in railway operation was downward, 101 employers and branches reporting 61,451 workers, as compared with 63,169 in the preceding month. There were decreases in Quebec, Ontario and the Western Provinces. The index number was higher than at December 1, 1938, when a much larger contraction had been indicated.

Shipping and Stevedoring.—Employment in shipping was more active; 365 persons were added to the staffs of the 122 co-operating employers, whose payrolls aggregated 16,338. A large loss had been noted at December 1, 1938, but the index then was several points higher

Construction and Maintenance

Building.—Employment in building construction showed a pronounced seasonal falling-off from the preceding month. Statements were compiled from 896 contractors employing 32,103 persons, as compared with 36,316 at November 1. The most extensive curtailment was in Quebec, although the trend was downward in all provinces except British Columbia. Shrinkage on a similar scale had been reported at December 1, 1938, when employment was in smaller volume.

Highway.—Important reductions were noted in the staffs of the 420 highway contractors furnishing statistics, who employed 60,609 workers at December 1, as compared with 80,201 in the preceding month. Employment decreased in all provinces except Nova Scotia. The contractions noted in this group at December 1, 1938, had been much less extensive, and the index then was many points higher.

Railway.—Activity on railway construction and maintenance showed another seasonal decline, which involved more workers than that occurring at the same date in 1938; nevertheless, the index then was slightly lower. Statistics were received from 30 contractors and divisional superintendents whose staffs were diminished from 25,811 at November 1, 1939, to 20,821 at the beginning of December. The most pronounced contractions were in Quebec, Ontario and the Prairie Provinces, although there was general shrinkage.

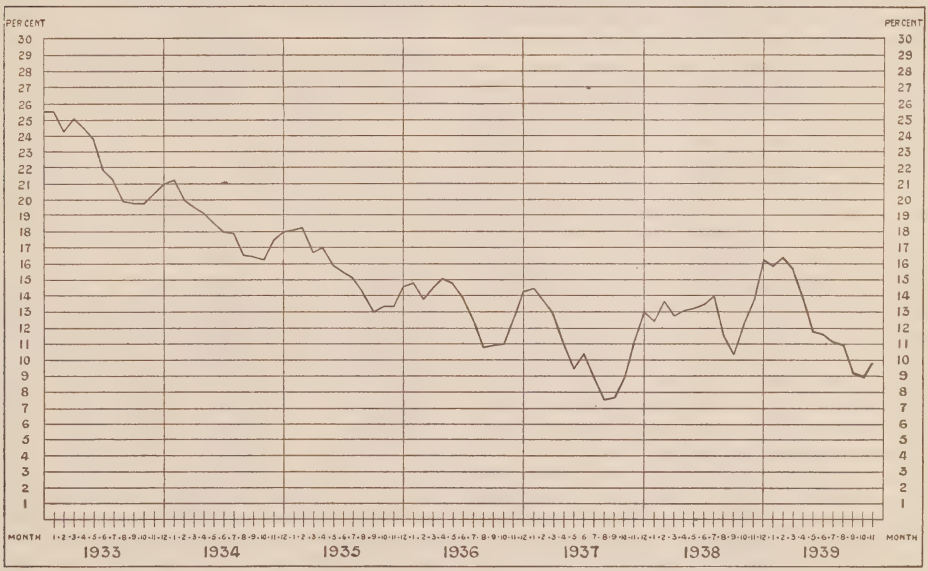
Services

Reductions were reported by the 593 co-operating firms, who had 29,371 employees, or 507 fewer than in the preceding month. Hotels and restaurants and laundries and dry-cleaning establishments were slacker. The employment index was about a point higher than at December 1, 1938; a smaller loss had been recorded at that date.

Trade

Important seasonal increases were again noted in retail trade, but wholesale houses released some employees. Returns were received from 2,081 trading establishments with 139,014 employees, or 4,285 more than at November 1. The index was slightly above that noted at the same date in the preceding year, being also higher than in any other December for which data are available.

Tables



Index numbers of employment by economic areas, and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns at the date under review.

(2) Unemployment in Trade Unions at the Close of November, 1939

Unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons who are occupied at work in other than their own trades or who are idle owing to illness are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The situation for local trade union members at the close of November, 1939, was slightly less favourable than in the preceding month, the 1,966 labour organizations forwarding reports with a total of 246,720 members showing that 23,940 or a percentage of 9·7 were entirely unemployed on the last day of the month, in contrast with a percentage of 9·0 in October. Unemployment in November was at a lower level than in the corresponding month of any year since 1929. Nova Scotia unions showed improvement in conditions from October of over 4 per cent, almost entirely due to the better situation prevailing in the manufacturing industries, particularly the iron and steel trades. In New Brunswick lesser gains were noted and in British Columbia there was but a nominal upward tendency. Curtailment in employment of over 6 per cent, however, was recorded from Manitoba, the garment trades and steam railway operation contributing largely to this unfavourable employment movement. Quebec and Saskatchewan unions indicated recessions in work available on a small scale and in Ontario and Alberta the declines were less than one per cent. Compared with the returns for November, 1938, when 13·7 per cent of the members reported were without work, New Brunswick and Ontario unions showed a noteworthy rise in employment during the month reviewed, the iron and steel trades and steam railway operation in the former province accounting mainly for the change, while in Ontario a large number of trades and industries participated in the better movement reflected.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Quebec, Manitoba, Alberta and British Columbia unions recorded more moderate expansion and in Nova Scotia and Saskatchewan slight gains occurred.

A separate tabulation is made each month showing the unemployment existing among trade union members in the largest city in each province, with the exception of Prince Edward Island. Of these Winnipeg unions indicated a considerable slowing up in activity during November from the preceding month and in Edmonton recessions on a somewhat smaller scale were recorded. A less favourable employment tendency was manifest also by Regina, Toronto, Vancouver and Montreal members, though the variations from October

were quite small. Halifax and Saint John unions alone reflected a slightly better trend. Moderate employment expansion from November, 1938, was apparent among Saint John, Montreal, Toronto and Winnipeg members and minor gains were evident in Halifax, Regina and Vancouver. In Edmonton the variation from November a year ago was so slight as to be almost negligible, though tending in an unfavourable direction.

Accompanying this article is a chart which illustrates the trend of unemployment by months from January, 1933, to date. During November, the curve pursued an upward course from the close of October, an evidence of increased unemployment. At the end of the month the level of the curve stood somewhat below that of November, 1938, reflecting a better situation during the month reviewed.

The 574 organizations in the manufacturing industries making returns at the close of November with a membership numbering 94,727 persons indicated that 9,412 or a percentage of 9·9 were idle on the last day of the month, in contrast with percentages of 10·3 in October and 14·8 in November, 1938. A somewhat greater volume of activity than in October was afforded glass, iron and steel and hat, cap and glove workers, and paper makers and slight gains were apparent among cigar and tobacco, and textile and carpet workers, bakers and confectioners, and metal polishers. On the contrary, meat cutters and butchers, gas and electric current employees showed noteworthy percentage recessions in activity, though affecting few persons as their membership was rather small. Declines in activity of lesser degree were manifest by general labourers, garment, rubber, wood and brewery workers and printing tradesmen. Leather and fur workers, however, maintained the same volume of unemployment as in October. Extensive employment recovery from November, 1938, was evident among wood and hat, cap and glove workers, mill and smelter men, and meat cutters and butchers and noteworthy improvement was apparent among general labourers, iron and steel, textile and carpet and garment workers and bakers and confectioners. More moderate advancement was recorded by paper makers, brewery and glass workers. Metal polishers, and cigar and tobacco workers reported minor gains in work afforded. Leather workers, on the other hand, suffered severe losses in employment from November, 1938, and pronounced recessions were indicated by electric current employees. Gas workers also showed considerable falling off in activity and the situation declined for printing tradesmen, rubber and fur workers.

In coal mining the volume of unemployment at the close of November, 1939, remained much the same as in October, though fluctuations were apparent in the various provinces. This was manifest by the returns compiled from 57 local unions, with a membership aggregate of 21,769 persons, 828 or 3·8 per cent of whom were out of work on the last day of the month, in comparison with 3·7 per cent of inactivity in October. Nova Scotia and Alberta unions reported nominal increases in work available which were just more than counteracted by the recessions evident in British Columbia areas. New Brunswick unions, as in the preceding month, reported all their members busily engaged. Heightened activity on a small scale was registered among coal miners during November from the corresponding month in 1938, when 5·2 per cent of idleness was reported. In this comparison Nova Scotia, Alberta and British Columbia unions indicated an upward movement of employment during the month reviewed, though the variations from November a year ago were

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

rather small. In New Brunswick all members were reported at work during the two months under comparison.

Building and construction activities, due largely to seasonal influences, were quieter during November than in the preceding month, though the situation was considerably improved from November, 1938. Reporting for the month under review were 219 organizations of building tradesmen, involving 25,759 members, 6,449 or 25·0 per cent of whom were unemployed at the end of the month, as contrasted with 20·5 per cent of inactivity in October and with a percentage of 36·6 in November, 1938. Bricklayers, masons and plasterers reported losses from October involving the greatest number of members and decidedly less activity was evident among granite and stonecutters, steam shovelmen and bridge and structural iron workers. Declines in employment on a considerably smaller scale were shown by tile layers, lathers and roofers, painters, decorators and paperhangers, carpenters and joiners, hod carriers and building labourers, and plumbers and steamfitters. Electrical workers were the only tradesmen to manifest a favourable tendency, though the change from October was but fractional. A much higher level of activity than in November, 1938, was recorded by bricklayers, masons and plasterers, carpenters and joiners, and plumbers and steamfitters during the period surveyed and the situation for bridge and structural iron workers, and painters, decorators and paperhangers was considerably improved. Electrical workers indicated moderate expansion and a slightly upward trend was manifest by tile layers, lathers and roofers. On the other hand, granite and stone cutters, steam shovelmen and hod carriers and building labourers suffered extensive employment losses.

Retarded activity on a small scale was evident in the transportation industries during November from the previous month according to the returns compiled from 846 associations including 69,480 members. Of these, 4,799 or a percentage of 6·9 were out of work on the last day of the month, as compared with 5·5 per cent in October. Steam railway employees, whose returns included over 80 per cent of the entire group membership reported, teamsters and chauffeurs, and street and electric railway employees all reflected some slowing up in employment from October. Moderate advancement, however, was evident among navigation workers. More favourable conditions prevailed in the transportation industries as a whole during November than in the corresponding month of 1938, when 9·4 per cent of inactivity was recorded. In this comparison navigation workers showed noteworthy improvement in conditions during the month reviewed and the situation for steam railway employees was moderately better. Activity for teamsters and chauffeurs, on the contrary, was at a considerably lower level than in November, 1938, and employment for street and electric railway workers subsided slightly.

Adequate employment was available to all retail shop clerks reported at the close of November, as was the case in both the preceding month and in November, 1938. Making returns for the month under review were 5 associations of these workers embracing a membership of 1,374 persons.

At the close of November, 1939, returns were compiled from 82 associations of civic employees comprising 9,893 members, 218 or 2·2 per cent of whom were unemployed in comparison with 3·7 per cent at the end of October and with a percentage of 2·0 in November, 1938.

The miscellaneous group of trades indicated improvement in conditions on a small scale during November, 1939, over the previous month, the 141 local unions forwarding reports with 11,344 members showing that 628 were out of work on the last day of the month, a percentage of 5·5, contrasted with 6·2 per cent of unemployed members in October. More pronounced expansion was evident from November, 1938, when 10·6 per cent of idleness was reported.. Theatre and stage employees, and unclassified workers showed a gain in work afforded of over 2 per cent from October and among stationary engineers and firemen the advances registered were merely nominal. The tendency for hotel and restaurant employees were toward lessened activity, though the variation from October was almost negligible. Among barbers the situation remained identical with that of October. Contrasted with the returns for November, 1938, unclassified workers were much busier during the period reviewed and rather noteworthy gains were reflected by hotel and restaurant employees. Theatre and stage employees showed more moderate expansion and the tendency for stationary engineers and firemen was but fractionally upward. Activity for barbers, however, was nominally retarded.

Fishermen were much more actively engaged during November than in either the previous month or November, 1938, the 5 associations furnishing reports with 2,093 members showing that 100 were unemployed on the last day of the month, a percentage of 4·8 in contrast with percentages of 16·0 in October and 11·7 in November a year ago.

The situation for lumber workers and loggers at the close of November was maintained at

almost the same level as in October, unemployment standing at 20·8 per cent as compared with a percentage of 20·7 in October. The November percentage was based on the returns compiled from 6 associations of these workers with 2,405 members, 500 of whom were without work at the end of the month. Much better conditions prevailed than in November, 1938, when 30·4 per cent of unemployment was recorded.

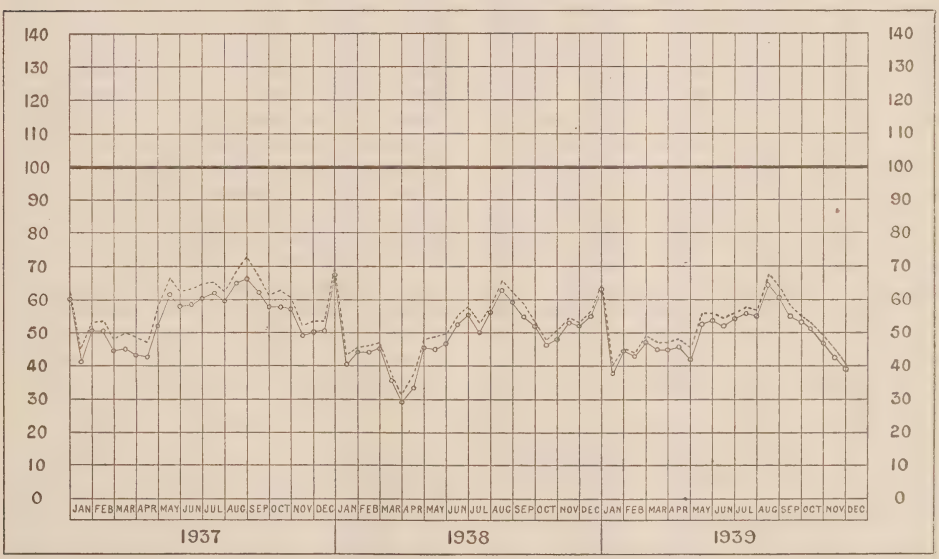

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1929 to 1938, inclusive, and also the percentages of unemployment by provinces for November or each year from 1929 to 1936, inclusive, and for each month from November, 1937, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for November, 1939

A loss of over 18 per cent was registered in the volume of business transacted during November, 1939, as indicated by the average daily placements effected when compared with that of the preceding month; likewise, a decline of more than 32 per cent was shown in comparison with the work effected in November a year ago. In the first instance all groups recorded fewer placements, the greatest losses being those in construction and maintenance, logging and services, with others of more moderate proportions in farming, manufacturing, trade and mining, that in transportation being minor only. Under the second comparison a very heavy reduction, chiefly in the Prairie Provinces, was shown in farming and a decline of major proportions, particularly in Quebec and British Columbia, in construction and maintenance. The loss reported in services was not so marked, while those in logging and transportation were small. Manufacturing, trade and mining, however, reported gains, the largest, which was fairly substantial, being in manufacturing.

The accompanying chart shows the trend of employment since January, 1937, as represented by the ratios of vacancies and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. From the graph it will be seen that the curves of vacancies and placements in relation to applications followed a marked downward course throughout November, reaching levels at the close of the period much lower than those recorded at the end of the corresponding month a year ago. The ratio of vacancies to each 100 applications was 44·6 during the first half and 40·1 during the second half of November, 1939, in contrast

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

with the ratios of 54·7 and 53·1 during the corresponding periods of 1938. The ratios of placements to each 100 applications during the periods under review were 42·8 and 39·2, as compared with 53·1 and 52·0 during the corresponding month of 1938.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during November, 1939, was 1,197, as compared with 1,487 during the preceding month and with 1,755 in November a year ago.

The average number of applications for employment received daily by the offices of the Service during the month under review was 2,824, in comparison with 2,923 in October, 1939 and with 3,258 during November, 1938.

The average number of placements made daily by offices of the Service during November, 1939, was 1,159, of which 768 were in regular employment and 391 in work of one week's duration or less, as compared with a total daily average of 1,421 during the preceding month. Placements in November a year ago averaged 1,712 daily, consisting of 1,274 placements in regular and 438 in casual employment.

During the month of November, 1939, the offices of the Service referred 30,628 persons to vacancies and effected a total of 28,953 placements. Of these, the placements in regular employment were 19,200, of which 13,545 were of men and 5,655 of women, while placements in casual work totalled 9,753. The number of vacancies reported by employers was 19,059 for men and 10,852 for women, a total of 29,911, while applications for work numbered 70,581, of which 51,044 were from men and 19,537 from women. Reports for October, 1939, showed 37,157 positions available, 73,057 applications made and 35,505 placements effected, while in November, 1938, there were recorded 43,859 vacancies, 81,426 applications for work and 42,783 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1929, to date:

Year	Placements		
	Regular	Casual	Totals
1929	260,747	137,620	398,367
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939 (11 months)	228,559	132,023	360,582

NOVA SCOTIA

There was an increase of over 9 per cent in the number of positions offered through Employment Offices in Nova Scotia during November when compared with the preceding month, but a decline of nearly 9 per cent in comparison with the corresponding month of the previous year. Placements were over 11 per cent above October, but over 9 per cent less than during November, 1938. Increased placements were reported in all industrial divisions, except construction and maintenance and transportation, when compared with November a year ago. The loss in transportation was quite small, but the decrease in construction and maintenance was sufficiently large to offset the gains in all other groups. Placements by industrial divisions included manufacturing, 29; logging, 40; mining, 30; construction and maintenance, 536; trade, 35, and services, 642, of which 476 were of household workers. During the month 469 men and 144 women were placed in regular employment.

NEW BRUNSWICK

During the month of November positions offered through Employment Offices in New Brunswick were slightly above the preceding month and 11 per cent higher than during the corresponding month of the previous year. There was an increase also in placements of nearly 2 per cent when compared with October and of over 11 per cent in comparison with November, 1938. The only change of importance in placements by industrial groups from November, 1938, was a gain in construction and maintenance. This increase was offset in part by small declines in services and manufacturing. The changes in other groups were quite small. Placements under construction and maintenance numbered 543 and in services 650. Of the latter 430 were of household workers. Regular placements numbered 189 of men and 113 of women.

QUEBEC

Orders received at Employment Offices in the Province of Quebec called for 12 per cent fewer workers than in the previous month and over 13 per cent less than during the corresponding month of 1938. There was a decrease also in placements of 14 per cent when compared with October and of nearly 18 per cent in comparison with November a year ago. When comparing placements by industrial groups with November, 1938, there was a substantial decrease under construction and maintenance and a moderate loss in transportation. These declines were partly offset by large gains in logging and services and moderate increases in manufacturing, trade

and farming. Other changes were nominal only. Industrial divisions in which most of the placements were effected during the month were manufacturing, 185; logging, 1,274; construction and maintenance, 1,834; trade, 91 and services, 3,312, of which 3,136 were of household workers. There were 3,367 men and 2,053 women placed in regular employment.

ONTARIO

Employment opportunities, as indicated by orders received at Employment Offices in Ontario during November, were 27 per cent less favourable than in the preceding month, but over 12 per cent better than during the corresponding month of the previous year. There was a decrease of nearly 24 per cent in placements when compared with October, but a gain of 15 per cent in comparison with November, 1938. With the exception of a fairly large decline in construction and maintenance, all industrial divisions showed gains in placements over November a year ago. The most important increases were in manufacturing, logging, services, transportation and farming. Placements by industrial divisions included manufacturing, 1,370; logging, 1,361; farming, 696, transportation, 218; construction and maintenance, 2,859; trade, 306 and services, 3,637, of which 2,521 were of household workers. During the month 4,428 men and 1,780 women were placed in regular employment.

MANITOBA

Employment Offices in Manitoba received orders for over 24 per cent fewer workers in November than in the preceding month and over 17 per cent less than during the corresponding month of the previous year. There was a decrease also in placements of nearly 24 per cent when compared with October and of over 13 per cent in comparison with November, 1938. Farm placements were considerably less than during November a year ago and accounted for the decline under this comparison for the province as a whole. There was a fairly large increase in construction and maintenance and moderate gains in logging and manufacturing, but the changes in all other groups were quite small. Placements by industrial divisions included manufacturing, 65; logging, 354; farming, 939; construction and maintenance, 1,116; and services, 720, of which 618 were of household workers. There were 2,428 men and 401 women placed in regular employment.

SASKATCHEWAN

Positions offered through Employment Offices in Saskatchewan during November were 34 per cent less than in the preceding month and nearly 89 per cent less than during the corresponding month of the previous year. There was a decrease also in placements of over 32 per cent when compared with October and of nearly 89 per cent in comparison with November, 1938. The abnormally large decrease from November of the previous year was due to a substantial reduction in the placements of farm hands and farm domestics under the Farm Improvement and Employment Plan, under which scheme many workers were placed in November, 1938. There were small gains in manufacturing, construction and maintenance and trade. Industrial divisions in which most of the placements were effected during the month were manufacturing, 52; farming, 444, and services, 586, of which 431 were of household workers. During the month 509 men and 332 women were placed in regular employment.

ALBERTA

During the month of November orders received at Employment Offices in Alberta called for nearly 20 per cent fewer workers than in the preceding month and over 31 per cent less than during the corresponding month of the preceding year. Placements also were over 19 per cent less than in October and nearly 36 per cent below November, 1938. A large reduction in farm placements accounted for the decline from November of the previous year for the province as a whole. This decrease was partly offset by moderate gains in logging and services. The changes in all other groups were quite small. Placements by industrial divisions included logging, 228; farming, 724; mining; 76; construction and maintenance, 162, and services, 645, of which 506 were of household workers. During the month 1,174 men and 424 women were placed in regular employment.

BRITISH COLUMBIA

There was a decrease of 11 per cent in the number of positions offered through Employment Offices in British Columbia when compared with the preceding month and of over 52 per cent when compared with the corresponding month of the previous year. Slightly higher percentages of loss were reported in placements under both comparisons. The large decrease in placements from November, 1938, was due to substantial declines in logging and construction and maintenance. There was a moderate increase in services and smaller gains in manufacturing and trade. Minor losses were reported in farming and mining; changes in other groups were nominal only. Industrial divisions in which most of the placements were effected during the month were manufacturing, 90; farming, 65; construction and maintenance, 1,579 and services, 893, of which 650 were of household workers. Placements in regular employment numbered 981 of men and 408 of women.

Movement of Labour

During the month of November, 1939, the offices of the Employment Service of Canada effected 19,200 placements in regular employment 8,191 of which were for persons for whom the employment located was outside the immediate district of the offices at which they were registered. Of the latter, 883 were granted the Employment Service reduced transportation rate, 739 proceeding to centres within the same province as the despatching office and 144 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may desire to travel to distant employment for which no workers are available locally.

In Quebec during November one bushman secured a certificate at the Hull office for transportation to Pembroke. The movement of labour in Ontario during November was entirely to provincial situations and embraced the transfer of 661 persons. Of these 655 were destined to logging activities at various centres, the Port Arthur zone receiving 329, the Sudbury zone 145, the Fort William zone 131, the Sault Ste. Marie zone 49 and the Pembroke zone one. A number of offices co-operated in the despatch of these workmen. The Timmins zone received 2 farm hands and one labourer from Toronto and the Welland zone one patternmaker from Windsor. For employment within their respective zones the Fort William office transferred one lineman and the Port Arthur office one hotel waitress. The Winnipeg offices assisted in the despatch of the 176 workers benefiting by the reduced rate in Manitoba during November. Of these, 33 went to provincial employment and 143 outside the province. The former were destined to points in the Winnipeg zone and included 32 bushworkers and one miner. Of the interprovincial transfers 142 were bushmen and one, a saw filer bound for centres in the Port Arthur zone. Vouchers for reduced transportation were granted in Saskatchewan during November to two persons going to provincial employment. From Prince Albert one sawmill worker journeyed to Yorkton and from Saskatoon one bushman went to Prince Albert. Alberta transfers at the reduced rate during November were 40 in number, all provincial. These were effected by the Edmonton office, which despatched 16 mine workers, 16 bushmen, 3 cooks, 3 oil refinery workers, one fisherman and one farm hand to various points within the territory administered by that city office. Taking advantage of the reduced rate in British Columbia during November 2 apple packers secured certificates at the New Westminster office for transportation to Penticton and one housekeeper was carried at the special rate from Vancouver to Nelson.

Of the 883 workers who profited by the Employment Service reduced transportation rate during November 472 were conveyed by the Canadian National Railways and 411 by the Canadian Pacific Railway.

(4) Building Permits Issued in Canada During November, 1939

The aggregate value of the construction represented by the building permits issued by 58 cities during November was $4,148,889. This was a decrease of $1,463,380, or 26·1 per cent, as compared with the October figure of $5,612,269, while the total was lower by $553,448, or 11·8 per cent, than in November, 1938, when the estimated value of the building authorized by these cities was $4,702,337. The latest figure was also below that for November, 1937, but with these exceptions was the largest for that month in the years since 1931.

The value of the building permits taken out in the first eleven months of the present year was $53,688,802; this was lower than the aggregate of $57,434,417 reported in the period, January-November, 1938, but substantially exceeded the total for the same months in any other year since 1931. However, the eleven months' aggregate in each of these years has been very much lower than in preceding years of the record; the wholesale prices of building materials have recently been lower than in the same period of either 1938 or 1937, although they continue higher than in any of the years, 1931-1936.

Some 50 cities furnished detailed statistics for November 1, 1939, showing that they had issued more than 500 permits for dwellings estimated to cost approximately $1,850,000, and about 1,900 permits for other buildings estimated at over $2,200,000. There were also two engineering projects valued at $23,000. During October, permits were issued for the erection of about 580 dwellings and 2,200 other buildings, estimated to cost approximately $1,900,000 and $3,600,000, respectively.

Quebec and Saskatchewan reported increases over October in the value of the building authorized; the former gain amounted to $340,847, or 36·4 per cent, while that in Saskatchewan was very slight. Reductions in this comparison were indicated in the remaining provinces, that of $1,118,059, or 36·2 per cent, in Ontario being most pronounced.

As compared with November, 1938, New Brunswick and Alberta showed increases, of $31,785, or 82·5 per cent, and $91,112, or 124·3 per cent, respectively. Of the declines

elsewhere reported, those of $306,329, or 81·7 per cent, in Nova Scotia, and $244,106, or 16·1 per cent, in Quebec were largest.

Of the four most populous centres, Montreal and Toronto recorded increases in the value of the building authorized in November as compared with the preceding month, but in each case the total was lower than in November of last year. In Winnipeg and Vancouver, the aggregate value was lower than in either October, 1939, or November of last year. Of the other centres, Moncton, Saint John, Sherbrooke, Three Rivers, Chatham, Kitchener, Owen Sound, St. Catharines, St. Thomas, York and East York Townships, Riverside, Moose Jaw, Lethbridge and Victoria reported higher building authorizations than in either the preceding month, or the same month of 1938.

Table I shows the value of the building authorized by 58 cities during November and in the first eleven months of each year since 1926, as well as index numbers for the latter, based upon the total for 1926 as 100. The January-November index numbers of wholesale prices of building materials in these years are also given (average 1926=100).

The aggregate for the first eleven months of this year was lower by $3,745,615 than in 1938, but was greater than in the same period of any other year since 1931. The average index number of wholesale prices of building materials, though lower than in 1937 and 1938, was higher than in preceding years since 1930.

Table II gives the value of the building permits issued by 58 cities in November, 1939, and November, 1938. The 35 cities for which records are available since 1910 are marked thus *.

TABLE I

Year	Value of permits issued in November	Value of permits issued in first eleven months	Indexes of value of permits issued in first eleven months (1926=100)	Average indexes of wholesale prices of building materials in first eleven months (average 1926=100)

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF DECEMBER, 1939

Reports of Superintendents of the Employment Service of Canada

THE employment situation at the end of December was reported by the superintendents of the Employment Service to be as follows:—

Farmers in the Maritime Provinces were engaged in routine work and the delivery of firewood. Farm produce at the markets was abundant, consisting chiefly of meats, butter, eggs and poultry. Fishing was light, there being in particular a great scarcity of smelt, although haddock, cod and lobsters were more plentiful. Improved weather conditions had helped lumbermen, so that additional men had found employment. Coal mines in the New Glasgow area worked from three and a half to five days per week, while those in Cape Breton and vicinity operated two and a half to six days. Canning factories, pulp mills, sugar refineries and wood and veneer plants were fully occupied, but some idleness was reported by the iron and steel industry. Building was somewhat held up by adverse weather and a scarcity of certain necessary supplies. Road construction continued, but on a reduced scale. Passenger and freight traffic during the holiday season was very heavy and trade at that time correspondingly good, although a slight falling off in the latter was reported, following the Christmas rush. Difficulty was still noted in obtaining experienced maids for household service.

In the Province of Quebec farming was quiet, but great activity prevailed in logging throughout all lumbering districts. Manufacturing, too, recorded improvement, the more important centres reporting, in particular, as follows:—Montreal, pulp and paper industries exceptionally active and food and textiles normal; Sherbrooke,—many industries were benefiting from war work, especially iron and steel plants in connection with the making of armaments and machinery, and textile mills in the manufacturing of army uniforms; Three Rivers,—paper, iron and cotton establishments operating regularly; Hull,—a demand reported for machinists, engineers and skilled labour. Building construction had slackened considerably in nearly all parts of the province, Sherbrooke and other sections of the Eastern Townships alone reporting the majority of skilled labour employed. Trade was better, with substantial staff increases. There was also a greater call for servants for domestic service in Montreal than in the rural centres and more placements effected, especially in hotels.

Farm orders in Ontario came in slowly and a fair supply of men was available. Logging operators were marking time, with camps partly staffed, many of the workers having gone away for Christmas and New Year's. More of the smaller camps were re-opening with every snow fall, but a greater depth of snow was needed before sleigh hauling could be started. Mining was quiet, except at Timmins, where the situation was normal and a fair demand reported for various classes of miners. On the whole, staff and production levels in manufacturing were being maintained, with indications pointing to increased activity in the New Year. Some firms were closed down for a short time for stock taking, but steel, textiles, rope and paper industries were busy and the majority of machine shops was running steadily. War orders also had increased the output in some lines. No material change was registered in the auto industry, but difficulty was experienced in obtaining sufficient steel for bridge construction. A lull in the building trades was quite pronounced, partly due to colder weather and partly to the completion of work started earlier in the season. Nearly all highway construction camps had closed down, or were running with skeleton staffs for the time being. Freight transportation was less, but extra railway crews had been required for passenger service. Holiday business was good and improvement shown in retail sales. In the Women's Department, the call for extra help in domestic service for Christmas and New Year's increased temporary employment, but difficulty was experienced in obtaining a sufficient number of fully qualified applicants as cooks and cooks-general. Requests for industrial and clerical workers showed the usual decline over the holiday period.

In the Prairie provinces there was very little demand for farm help, but logging was fairly good, although operations were delayed through lack of snow for hauling. Mining was quiet, except at Drumheller, where most of the mines were working full time, so as to handle increased orders. Manufacturing showed little change. Construction was only fair; some work was still in progress under the Department of National Defence for winter quarters for the troops. Trade was slacker, following the Christmas rush, which had been greater than in previous years. Fewer calls for help were received in the Women's Division, but, as in other provinces, there was a shortage of suitable applicants for positions available.

Farming in British Columbia was quiet, but lumbering was much better, a number of camps, as well as saw mills, having resumed

operations. Mining was steady, but with no extra call for help. There was a slackening in requests for labour, on account of the completion of certain contracts and seasonal layoffs, so that numerous applicants were applying for work, some of whom found temporary or casual employment with firms or householders. Shipping and longshore work was much better at New Westminster, but quiet at Prince Rupert, while at Victoria there was a general little pick-up, which was welcomed by waterfront workers, who had experienced quite a layoff on account of the shortage of tonnage. With lumber once more moving regularly, the outlook for longshoremen was therefore, much better. Activity in the shipyards, however, still remained somewhat in abeyance until new contracts were awarded. Trade had been good over the holidays, but the busy period had been followed by some quietness, during which time stock-taking was proceeding in many stores. An increased number of casual placements had been made in the Women's Division, with the usual number of requests received for domestics in regular household service.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

(Owing to the non-receipt of information essential to the compilation of employment and unemployment statistics for Great Britain this section is unavoidably omitted this month.)

United States

According to a report issued on December 21, by Miss Frances Perkins, United States Secretary of Labor, employment in nonagricultural industries in November decreased by about 100,000. Ordinarily, the report stated, employment is reduced by about 350,000 at this time of year, because of seasonal curtailment in many industries. The smaller reduction this year indicates continued strength in the industrial situation. Declines were recorded principally in construction and water transportation.

The following paragraphs taken from the official press release indicate the employment situation in the United States to be as follows:

In heavy manufacturing industries, there were contra-seasonal gains. Retail employment also increased. In agriculture, which is not included in these estimates, fewer people are always employed at this time of year, so that employment as a whole has probably declined by considerably more than these figures indicate. Since last November more than one and a quarter million workers have been reemployed in nonagricultural occupations, exclusive of WPA and other special government employment.

In manufacturing, 60 of the 90 industries reporting to the Bureau of Labor Statistics had more employees. For manufacturing as a whole there was a net increase in employment of 0·2 per cent, or 20,000 workers, compared with the expected seasonal lay-off of about 150,000. The important gains in factory employment, as in earlier months, were in the heavy industries—iron and steel, agricultural machinery, foundries and machine tools, as well as in factories making furniture, and cotton and woollen goods. Declines were concentrated in the food and clothing industries and were largely seasonal. Anthracite and bituminous coal mines and metal mines took on some workers, although the total pay roll in anthracite mines was substantially reduced in the first half of November because of time off for voting and the observance of Armistice Day.

In retail trade the gain of 1·5 per cent, or more than 50,000 employees, was slightly larger than the average increase from October to November. Additions were largest in department stores and other stores selling general merchandise. Wholesale firms reported a slight employment increase, accompanying sustained manufacturing activity and a larger volume of retail trade.

The principal important declines in employment in November were in construction and transportation. Employment in water transportation has been adversely affected by neutrality legislation and by labour disputes. The railroads laid off about 17,000 workers as a result of seasonal curtailment of maintenance of way activities. Railroads are employing 77,700 more men than a year ago, however, and until this month had increased their forces steadily since last January. In public utilities and the service industries there were small reductions in employment in November.

Factory Employment.—For the sixth consecutive month employment in manufacturing industries showed an increase. The actual net gain in November was slight—about 20,000 wage earners or 0·2 per cent, in contrast with an expected seasonal decline of 1·9 per cent. Thus the increase in employment in some lines of manufacturing was large enough to offset seasonal declines in the food and clothing industries. Weekly wage

disbursements were also larger by about a quarter of a million dollars, or 0·2 per cent, in contrast with an average October-November decline of about 3·0 per cent. Of the 90 manufacturing industries surveyed, 60 reported more workers employed in November than in October and 45 reported larger pay rolls.

The durable-goods group of industries as a whole showed gains over the preceding month of 2·1 per cent in employment and 1·5 per cent in pay rolls, as output of steel and the machinery industries gained further, while the nondurable-goods group reported declines of 1·4 per cent and 1·3 per cent, respectively, largely because of seasonal reductions in the food and clothing industries. Employment has increased 18·3 per cent since last November in the durable-goods industries and 5·9 per cent in the nondurable-goods group, and payroll increases are reported at 30·4 per cent and 11·2 per cent, respectively.

The gain of 11 per cent in the aircraft industry was the fourteenth consecutive monthly increase and brought the employment index for this industry to an all-time high, nearly three and one-half times as high as in 1929.

Employment declines, for the most part seasonal, were reported by 9 of the durable-goods group of industries and 21 of the nondurable-goods industries. Employment in automobile factories showed a contraseasonal decrease of 5·3 per cent or 23,000 wage earners as the result of labour disputes. Important seasonal declines were reported for the following industries: canning and preserving (50,400 workers), women's clothing (13,100 workers), boots and shoes (9,400 workers), men's clothing (8,400 workers), millinery (4,900 workers), beverages (3,000 workers), and baking (2,500 workers).

Employment in Non-Manufacturing Industries.

Employment in retail stores gained more than seasonally by 1·5 per cent between mid-October and mid-November, and pay rolls increased 0·9 per cent. Stores selling general merchandise increased the number of their workers by 6·4 per cent, a much greater gain than the average increase of 3·9 per cent. The employment index for the general merchandising group, 109·8 per cent of the 1929 average, indicated a return to the level of November, 1937. The delivery of new automobile models accounted for an increase of 1·2 per cent in sales employees of automobile firms, and jewelry stores took on 5·7 per cent more workers to handle the holiday trade. Principal reductions were in lumber yards and in coal, wood, and ice establishments.

Anthracite mines increased employment by 0·5 per cent while pay rolls dropped 18·3 per cent, due in part to decreased production in the first half of November caused by election day and the observance of Armistice Day. Employment in bituminous coal mines increased seasonally by 2·3 per cent, raising the employment index to 95·1 per cent of the 1929 average. Pay rolls declined 1·0 per cent. Since November, 1938, pay rolls in both anthracite and bituminous coal mines have increased by nearly 20 per cent.

Metal mines increased their working forces contraseasonally by 1·8 per cent, and pay rolls by 1·0 per cent. Since November, 1938, pay rolls in metal mines have advanced 22·5 per cent. The seasonal closing of quarrying operations in some localities resulted in a reduction of 2·2 per cent in employment and of 6·0 per cent in pay rolls. These are smaller than the average decreases for November. Oil wells reduced employment seasonally by 1·0 per cent, but increased pay rolls by 0·9 per cent. Because of reduced operations the oil producing industry is employing fewer workers than a year ago.

Employment in Private Building Construction.—Employment in private building construction decreased seasonally by 3·1 per cent and pay rolls by 3·5 per cent from October to November, according to reports from 12,390 contractors employing 126,371 workers. These declines were smaller than in previous years. These reports on which the figures are based do not cover construction projects financed by the Works Progress Administration, the Public Works Administration, and the Reconstruction Finance Corporation or by regular appropriations of the Federal, State or local governments.

Because the need for relief work is greater in the winter season, more workers were given employment in November on projects operated by the Works Projects Administration. The number at work during the month was 1,945,000, an increase of 119,000 over October but 1,268,000 less than in November, 1938. Payroll disbursements of $102,300,000 were $3,757,000 more than in October and $69,170,000 less than in November a year ago. Federal agency projects under the Works Projects Administration employed 2,000 more persons than in October.

Increased employment was reported in November on work projects of the National Youth Administration and the Student Aid Program. The increase on the work projects amounted to 25,000 and on the Student Aid Program, to 82,000.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada, which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefore, the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages Scales of the respective provinces.

Respecting contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight-Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. The clause relating to wages and hours in the last named statute is in the terms following:—

> "All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;
>
> The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provided or except in cases of emergency as may be approved by the Minister."

This Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by Federal grant in the form of contribution, subsidy, loan, advance or guarantee. Thus, with respect to works for the elimination of grade crossings, towards which assistance is granted from Dominion public funds under Orders of the Board of Transport Commissioners, and certain other works being carried out under agreement with the provinces which are also assisted by grant of federal funds, the same labour conditions are enforced which apply to works of building and construction undertaken for the various departments of the Dominion Government.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of

wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours, on contracts for governmental supplies and equipment the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada:

(1) *Works of Construction, Remodelling*

GROUP "A" CONTRACTS

Repair or Demolition

NOTE: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provide that "Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work," and also specify that the rates of wages set out therein are *minimum* rates only and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation."

DEPARTMENT OF PUBLIC WORKS

Construction of harbour improvements at Tracadie, N.B. Name of contractors, Messrs. Joseph E. and Daniel P. Connolly, Bathurst, N.B. Date of contract, November 23, 1939. Amount of contract, approximately $22,026.81. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 55
Blacksmiths' helpers	0 40
Boatman (rowboat)	0 35
Cement and concrete mixer operator:	
Steam	0 60
Gasoline or electric	0 45
Compressor operator (gasoline or electric)	0 45
Driver, horse and cart	0 50
Driver, team and wagon	0 60
Drivers	0 35
Engineer, operating, steam:	
Single or double drum	0 60
Three or more drums	0 70
Fireman, stationary	0 40
Labourers	0 35
Motor boat operator	0 40
Machinist	0 60
Machinist's helper	0 40
Pile driver and derrick engineer	0 60
Pile driver and derrick firemen	0 40
Pile driver and derrick labourers	0 40
Pile driver and derrick men (rigging, setting and signalling)	0 50
Pile driver and derrick foreman	0 70
Timbermen and cribmen (measuring, scribing and by use of the axe, adze, etc., cutting and fitting timber)	0 42
Welders and burners	0 55
Watchmen	0 30

Construction of an extension to the King's wharf at Quebec, P.Q. Name of contractors, Messrs. Bertrand & Brother, L'Orignal, Ont. Date of contract, November 25, 1939. Amount of contract, approximately $46,744. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 60
Blacksmiths' helpers	0 45
Boatmen (rowboats)	0 40
Compressor operators (gasoline or electric)	0 55
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 65
Drill runners	0 50
Engineers, operating, steam:	
Single or double drums	0 60
Three or more drums	0 70
Firemen, stationary	0 45
Hoist operators, tower (gasoline or electric)	0 55
Labourers	0 40
Machinists	0 65
Machinists' helpers	0 45
Motor boat operators	0 45
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Powdermen	0 50
Steam shovel engineers	0 85
Steam shovel cranemen	0 65
Steam shovel firemen	0 55
Steam shovel oilers	0 50
Shovel operators (gasoline)	0 85
Timbermen and cribmen (measuring, scribing and, by the use of adze, axe, etc., cutting and fitting timber)	0 50
Watchmen	0 35

Construction of a breakwater at Magpie, Saguenay Co., P.Q. Name of contractor, Mr. Jos. R. Lemieux, Levis, P.Q. Date of contract, December 6, 1939. Amount of contract, approximately $14,212.75. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 55
Blacksmiths' helpers	0 40
Boatmen (rowboats)	0 35
Compressor operators (gasoline or electric)	0 45
Drivers	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 60
Drill runners	0 45
Engineers, operating, steam:	
Single or double drums	0 60
Three or more drums	0 70
Firemen, stationary	0 40
Hoist operators—tower (gasoline or electric)	0 45
Labourers	0 35
Machinists	0 60
Machinists' helpers	0 40
Motor boat operators	0 40
Motor truck driver	0 40
Motor truck driver and truck	1 35
Powdermen	0 45
Steam shovel engineers	0 85
Steam shovel cranemen	0 65
Steam shovel firemen	0 55
Steam shovel oilers	0 50
Shovel operators (gasoline)	0 85
Timbermen and cribmen (measuring, scribing and by use of the axe, adze, etc., cutting and fitting timber)	0 42
Watchmen	0 30

Construction of a wharf at Cap des Rosiers, Gaspe Co., P.Q. Name of contractors, Messrs. A. Chretien and A. Dunn, Gaspe and Cap des Rosiers, P.Q. Date of contract, November 29, 1939. Amount of contract, approximately $19,277. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmith	$0 55
Blacksmith's helper	0 40
Boatmen (rowboat)	0 35
Compressor operators (gasoline or electric)	0 45
Drill runners	0 45
Driver, horse and cart	0 50
Driver, team and wagon	0 60
Drivers	0 35
Engineers (operating steam): single or double drum	0 60
Fireman, stationary	0 40
Labourers	0 35
Machinist	0 60
Machinist's helpers	0 40
Motor truck drivers	0 40
Motor truck driver and truck	1 35
Timbermen and cribmen (measuring, scribing and, by use of the axe, adze, etc., cutting and fitting timber)	0 42
Watchman	0 30

Construction of a public building at Brampton, Ont. Name of contractor, Mr. E. S. Martin, Toronto, Ont. Date of contract, December 4, 1939. Amount of contract, $13,800 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 80
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 40
Carpenters and joiners	0 60
Cement finishers	0 55
Cement and concrete mixer operators:	
Steam	0 65
Gasoline or electric	0 45
Compressor operators (gasoline or electric)	0 45
Drivers	0 35
Driver team and wagon	0 65
Driver, horse and cart	0 50
Drill runners	0 45
Electricians (inside wiremen)	0 65
Engineers, operating, steam:	
Single or double drums	0 65
Three or more drums	0 75
Engineers on steel erection	0 80
Firemen, stationary	0 40
Hoist operators—tower (gasoline or electric)	0 45
Labourers	0 35
Lathers, metal	0 60
Lathers, wood	0 55
Linoleum layers	0 50
Marble setters	0 80
Marble setters' helpers (all men assigned to help tradesmen)	0 40

	Per hour
Motor truck drivers	0 40
Motor truck driver and truck	1 40
Ornamental iron workers	0 55
Painters and glaziers	0 55
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 40
Plumbers and steamfitters	0 65
Roofers, felt and gravel: patent	0 40
Roofers, sheet metal	0 65
Sheet metal workers	0 65
Stonecutters	0 70
Stonemasons	0 80
Stonemasons' helpers (mixing and tempering mortar)	0 40
Structural steel workers	0 80
Terrazzo layers	0 75
Terrazzo finishers and helpers	0 60
Tile setters (ceramic)	0 80
Tile setters' helpers (all men assigned to help tradesmen)	0 40
Rodmen (reinforced steel)	0 45
Watchman	0 30
Waxers and polishers (floor)	0 40
Welders and burners on steel erection	0 80

Construction of an addition and alterations to the Poultry Office Building at the Experimental Farm, Ottawa, Ont., for the Department of Agriculture. Name of contractor, Mr. A. I. Garvock, Ottawa, Ont. Date of contract, November 24, 1939. Amount of contract, $21,700 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$1 00
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 50
Carpenters and joiners	0 85
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 70
Gasoline or electric	0 55
Compressor operators (gasoline or electric)	0 55
Drivers	0 45
Driver, horse and cart	0 60
Driver, team and wagon	0 80
Electricians, inside wiremen	0 80
Engineers, operating, steam:	
Single or double drums	0 70
Three or more drums	0 80
Firemen, stationary	0 50
Hoist operators, tower (gasoline or electric)	0 55
Labourers	0 45
Lathers, metal	0 70
Lathers, wood	0 65
Linoleum layers	0 60
Marble setters	1 00
Marble setters' helpers (all men assigned to help tradesmen)	0 50
Motor truck drivers	0 50
Motor truck driver and truck	1 45
Ornamental iron workers	0 60
Painters and glaziers	0 70
Plasterers	0 85
Plasterers' helpers (mixing and tempering material)	0 50
Plumbers and steamfitters	0 95
Roofers, shingles (wood, asbestos)	0 85
Rodmen—reinforced steel	0 55
Sheet metal workers	0 85
Steam shovel engineers	1 00
Steam shovel cranemen	0 70
Steam shovel firemen	0 55
Steam shovel oilers	0 50
Shovel operators (gasoline)	1 00
Tile setters (ceramic)	1 00
Tile setters' helpers (all men assigned to help tradesmen)	0 50
Watchman	0 40

Construction of an extension to the wharf at Newcastle, N.B. Name of contractors, Diamond Construction Co., Ltd., Fredericton, N.B. Date of contract, November 27, 1939. Amount of contract, approximately $17,990.50. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmith	$0 55
Blacksmith's helpers	0 40
Boatmen (rowboat)	0 35
Cement and concrete mixer operators: Gasoline or electric	0 45
Compressor operators: Gasoline or electric	0 45
Drivers	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 60
Labourers	0 35
Motor boat operators	0 40
Motor truck drivers	0 40
Motor truck driver and truck	1 35
Pile driver and derrick foremen	0 70
Pile driver and derrick engineers	0 60
Pile driver and derrick men (rigging, setting and signalling)	0 50
Pile driver and derrick firemen	0 40
Pile driver and derrick labourers	0 40
Timbermen and cribmen (measuring, scribing and by use of the axe, adze, etc., cutting and fitting timber)	0 42
Watchmen	0 30

Construction of an extension to the wharf at Baie des Sables, Matane Co., P.Q. Name of contractors, Messrs. Bertrand & Brother, L'Orignal, Ont. Date of contract, November 25, 1939. Amount of contract, approximately $76,832.80. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmith	$0 55
Blacksmith's helper	0 40
Boatmen (rowboat)	0 35
Carpenters and joiners	0 55
Compressor operators (gasoline or electric)	0 45
Drill runners	0 45
Driver, horse and cart	0 50
Driver, team and wagon	0 60
Drivers	0 35
Engineers, operating, steam (Single or double drum)	0 60
Fireman (stationary)	0 40
Hoist operator—tower (gasoline or electric)	0 45
Labourers	0 35
Machinist	0 60
Machinists' helpers	0 40
Motor truck drivers	0 40
Motor truck driver and truck	1 35
Timbermen and cribmen (measuring, scribing and by use of axe, adze, etc., cutting and fitting timber)	0 42
Watchman	0 30

Construction of a chain wire fence for the National Research Council annex, Ottawa, Ont. Name of contractors, Dominion Steel & Coal Corporation, Ltd., Montreal, P.Q. Date of contract, November 2, 1939. Amount of contract, $12,453. A fair wages schedule was included in the contract as follows:—

	Per hour
Carpenters and joiners	$0 85
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 70
Gasoline or electric	0 55
Compressor operators (gasoline or electric)	0 55
Drill runners	0 55
Drivers	0 45
Driver, horse and cart	0 60
Driver, team and wagon	0 80
Labourers	0 45
Motor truck drivers	0 50
Motor truck driver and truck	1 45
Rodmen—reinforced steel	0 55
Wire fence erectors	0 45
Watchman	0 40

Construction of a public building, Disraeli, P.Q. Name of contractor, L. Poudrier, Thetford Mines, P.Q. Date of contract, December 4, 1939. Amount of contract, $9,975 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 75
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 40
Carpenters and joiners	0 55
Cement finishers	0 50
Cement and concrete mixer operators:	
Steam	0 60
Gasoline or electric	0 45
Drivers	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 60
Electricians, inside wiremen	0 60
Engineers, operating, steam:	
Single or double drums	0 60
Three or more drums	0 70
Engineers on steel erection	0 75
Firemen, stationary	0 40
Labourers	0 35
Lathers, metal	0 55
Motor truck drivers	0 40
Motor truck driver and truck	1 35
Ornamental iron workers	0 55
Painters and glaziers	0 55
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 40
Plumbers and steamfitters	0 60
Roofers, felt and gravel: patent	0 40
Roofers, sheet metal	0 60
Sheet metal workers	0 60
Stonecutters	0 65
Stonemasons	0 75
Stonemasons' helpers (mixing and tempering mortar)	0 40
Structural steel workers	0 75
Tile setters, asphalt	0 70
Tile setters' helpers (all men assigned to help tradesmen)	0 40
Watchmen	0 30
Waxers and polishers (floor)	0 40
Welders and burners on steel erection	0 75

Construction of a breakwater extension, Arsaig, Antigonish County, N.S. Name of contractor, R. M. Hall, Halifax, N.S. Date of contract, November 10, 1939. Amount of contract, $15,950.60, approximately. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 55
Blacksmiths' helpers	0 40
Boatmen (rowboats)	0 35
Carpenters and joiners	0 55
Cement finishers	0 50
Cement and concrete mixer operators:	
Steam	0 60
Gasoline or electric	0 45
Drivers	0 35
Drivers, horse and cart	0 50
Drivers, team and wagon	0 60
Engineers, operating, steam:	
Single or double drum	0 60
Three or more drums	0 70
Firemen, stationary	0 40
Hoist operators, tower (gasoline or electric)	0 45
Labourers	0 35
Machinists	0 60
Machinists' helpers	0 40
Motor boat operators	0 40
Motor truck drivers	0 40
Motor truck drivers and truck	1 35
Timbermen and cribmen (measuring, scribing and by use of the axe, adze, etc., cutting and fitting timber)	0 42
Watchmen	0 30

Construction of a wharf, Batchawana, Ontario. Name of contractors, L. R. Brown & Company Limited, Sault Ste. Marie, Ontario. Date of contract, November 17, 1939. Amount of contract, $4,894.15, approximately. A fair wages schedule was included in the contract as follows:—

	Per hour
Driver	$0 35
Driver, team and wagon	0 65
Fireman, stationary	0 40
Labourer	0 35
Motor truck driver	0 40
Motor truck driver and truck	1 40
Pile driver and derrick engineer	0 65
Pile driver and derrick foreman	0 75
Pile driver and derrick fireman	0 40
Pile driver and derrick labourers	0 40
Pile driver and derrick men (rigging, setting and signalling)	0 50
Steam shovel engineer	0 90
Steam shovel cranemen	0 70
Steam shovel fireman	0 55
Steam shovel oiler	0 50
Shovel operator (gasoline)	0 90
Timberman and cribman (measuring, scribing and by use of axe, adze, etc., cutting and fitting timber)	0 42
Watchman	0 30

Construction of a wharf, Sombra, Ontario. Name of contractors, Sterling Construction Company Limited, Windsor, Ontario. Date of contract, November 16, 1939. Amount of contract, $12,892.15, approximately. A fair

wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 55
Blacksmiths' helpers	0 40
Driver, team and wagon	0 65
Drivers	0 35
Engineer, steam:	
Single or double drum	0 65
Three or more drums	0 75
Hoist operator—tower, gasoline	0 45
Labourers	0 35
Motor truck driver and truck	1 40
Motor truck driver	0 40
Machinist	0 60
Machinist's helper	0 40
Pile driver and derrick foreman	0 75
Pile driver and derrick engineer	0 65
Pile driver and derrick fireman	0 40
Pile driver and derrick man (rigging, setting and signalling)	0 50
Timberman and cribmen (measuring, scribing and, by the use of adze, axe, etc., cutting and fitting timber)	0 42
Pile driver and derrick labourers	0 40
Watchman	0 30

Reconstruction of a wharf, Cross Point, P.Q. Name of contractors, J Bertrand & Anatole Bertrand, L'Orignal, Ontario. Date of contract, October 26, 1939. Amount of contract, $42,902.55, approximately. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmith	$0 55
Blacksmith's helpers	0 40
Boatmen (rowboat)	0 35
Compressor operators (gasoline or electric)	0 45
Drill runners	0 45
Driver, horse and cart	0 50
Driver, team and wagon	0 60
Drivers	0 35
Engineers, operating, steam (single or double drum)	0 60
Fireman, stationary	0 40
Labourers	0 35
Machinist	0 60
Machinist's helper	0 40
Motor truck driver	0 40
Motor truck driver and truck	1 35
Powdermen	0 45
Pile driver and derrick foreman	0 70
Pile driver and derrick engineer	0 60
Pile driver and derrick fireman	0 40
Pile driver and derrick labourers	0 40
Pile driver and derrick men (rigging, setting and signalling)	0 50
Timbermen and cribmen (measuring, scribing and by use of the axe, adze, etc., cutting and fitting timber)	0 42
Watchman	0 30

Construction of stables for the R.C.M.P., Rockcliffe, Ontario. Name of contractor, H. Dagenais, Ottawa, Ontario. Date of contract, November 20, 1939. Amount of contract, $106,280 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$1 00
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 50
Carpenters and joiners	0 85
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 70
Gasoline or electric	0 55
Drivers	0 45
Driver, horse and cart	0 60
Driver, team and wagon	0 80
Electricians (inside wiremen)	0 80
Engineers, operating, steam:	
Single or double drums	0 70
Three or more drums	0 80
Engineers on steel erection	0 80
Firemen, stationary	0 50
Labourers	0 45
Lathers:	
Metal	0 70
Wood	0 65
Motor truck driver	0 50
Motor truck driver and truck	1 45
Ornamental iron workers	0 60
Painters and glaziers	0 65
Plasterers	0 85
Plasterers' helpers (mixing and tempering material)	0 50
Plumbers and steamfitters	0 95
Roofers, felt and gravel: patent	0 50
Roofers, sheet metal	0 85
Sheet metal workers	0 85
Stonecutters	0 80
Stonemasons	1 00
Stonemasons' helpers (mixing and tempering mortar)	0 50
Structural steel workers	0 80
Watchman	0 40
Welders and burners on steel erection	0 80

Construction of a public building, Alberni, B.C. Name of contractor, Thor M. Peterson, Port Alberni, B.C. Date of contract, November 20, 1939. Amount of contract, $14,390 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Asbestos insulation workers	$0 75
Brick and hollow tile layers	0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 70
Cement finishers	0 60
Cement and concrete mixer operator:	
Steam	0 65
Gasoline or electric	0 50
Driver	0 45
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Electricians (inside wiremen)	0 75
Engineers, operating, steam:	
Single or double drums	0 70
Three or more drums	0 75
Engineers on steel erection	1 12½
Firemen, stationary	0 45
Labourers	0 45
Lathers:	
Metal	0 70
Wood	0 65
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Ornamental iron workers	0 75
Painters and glaziers	0 65

	Per hour
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 45
Plumbers and steamfitters	0 80
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 45
Roofers, felt and gravel: patent	0 45
Roofers, sheet metal	0 65
Sheet metal workers	0 65
Stonecutters	0 80
Stonemasons	0 90
Stonemasons' helpers (mixing and tempering mortar)	0 45
Structural steel workers	1 12½
Terrazzo layers	0 75
Terrazzo finishers and helpers	0 60
Tile setters—asphalt	0 85
Tile setters' helpers (all men assigned to help tradesmen)	0 45
Watchman	0 40
Waxers and polishers—floor	0 45
Welders and burners on steel erection	1 12½

Construction of a public building, Woodville, Ontario. Name of contractors, M. Sullivan & Son, Limited, Arnprior, Ontario. Date of contract, November 11, 1939. Amount of contract, $11,437 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 80
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 40
Carpenters and joiners	0 60
Cement finishers	0 55
Cement and concrete mixer operators:	
Steam	0 65
Gasoline or electric	0 45
Drivers	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 65
Electricians (inside wiremen)	0 65
Engineers, operating, steam:	
Single or double drums	0 65
Three or more drums	0 75
Engineers on steel erection	0 80
Firemen, stationary	0 40
Labourers	0 35
Lathers, metal	0 60
Motor truck drivers	0 40
Motor truck driver and truck	1 40
Ornamental iron workers	0 55
Painters and glaziers	0 55
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 40
Plumber and steamfitters	0 65
Roofers, felt and gravel: patent	0 40
Roofers, sheet metal	0 65
Sheet metal workers	0 65
Stonecutters	0 70
Stonemasons	0 80
Stonemasons' helpers (mixing and tempering mortar)	0 40
Structural steel workers	0 80
Terrazzo layers	0 75
Terrazzo finishers and helpers	0 60
Tile setters—asphalt	0 75
Tile setters' helpers (all men assigned to help tradesmen)	0 40
Watchmen	0 30
Waxers and polishers (floor)	0 40
Welders and burners on steel erection	0 80

Construction of a wharf, Mamainse Harbour, Ont. Name of contractor, T. J. McGregor, Blind River, Ont. Date of contract, November 22, 1939. Amount of contract, $3,407, approximately. A fair wages schedule was included in the contract as follows:—

	Per hour
Drivers	$0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 65
Fireman, stationary	0 40
Labourers	0 35
Motor truck driver	0 40
Motor truck driver and truck	1 40
Steam shovel engineers	0 90
Steam shovel cranemen	0 70
Steam shovel firemen	0 55
Steam shovel oilers	0 50

Dunnage bags	S. S. Holden Ltd., Ottawa, Ont.
Undershirts and drawers	The C. Turnbull Co., Ltd., Galt, Ont.

Industrial Accidents in Quebec, 1939

According to a statement issued by Mr. A. Gaboury, general-manager of the Quebec Association for the Prevention of Industrial Accidents, the number of industrial accidents occurring in the province of Quebec during 1939 was 53,651 compared with 58,335 in the previous year, a reduction of 4,694 accidents. Concurrent with this reduction in accidents there was a reduction in the amount expended by the Quebec Workmen's Compensation Commission, the total expenditure on account of industrial accidents during 1939 being $4,042,646 compared with $4,999,067 so expended in 1938.

Soliciting the help of all citizens in the endeavour of the Association to protect Quebec workers, Mr. Gaboury further points out that "In order to meet the requirements of war contracts and other general requirements, the employers of Quebec will be called upon to increase production and personnel; an acceleration which may endanger the safety of workers and should induce us to intensify our efforts during the coming twelve months to prevent any increase it may bring about."

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of employers and workers are also included. Verbally accepted agreements are so indicated.

Construction: Buildings and Structures

WINNIPEG, MANITOBA.—MARBLE AND TILE SECTION OF THE WINNIPEG BUILDERS' EXCHANGE AND THE BRICKLAYERS AND MASONS' INTERNATIONAL UNION NO. 1 OF MANITOBA (MARBLE AND TILE SETTERS).

Agreement to be in effect from May 1, 1939, to April 30, 1940. Parties to meet one month before termination to discuss a new agreement.

Only union members to be employed.

Hours: 8 per day, 4 on Saturdays, a 44 hour week, except in July and August, when there shall be a 40 hour week with no work on Saturdays.

Overtime: time and one half; work on Saturday afternoon, Sundays, and on four specified holidays, double time.

Wage rate for marble, mosaic and tile setters: $1.05 per hour.

For work out of town, transporation to be paid by employer and 15 cents per hour extra to be paid to cover expenses.

Disputes are to be submitted to a joint arbitration committee whose decision will be final.

WINNIPEG, MANITOBA.—MARBLE AND TILE SECTION OF THE WINNIPEG BUILDERS' EXCHANGE AND TERRAZZO MECHANICS AND TILE AND MARBLE SETTERS' HELPERS' UNION, (LOCAL 128).

Agreement to be in effect from May 1, 1939, to April 30, 1940. The parties are to meet one month before expiration to discuss new agreement.

Only union members to be employed, if available.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime: first hour at single time; thereafter at time and one half.

Hourly wage rates: terrazzo mechanics 70 cents, machine rubbers (dry) 55 cents, machine rubbers (wet) 50 cents, helpers 50 cents.

For work out of the city, transportation to be paid by employer and 15 cents per hour extra to cover expenses.

Any disputes are to be referred to the joint arbitration committee whose decision will be final.

WINNIPEG, MANITOBA.—GENERAL CONTRACTORS' SECTION OF THE WINNIPEG BUILDERS' EXCHANGE AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL 343.

Agreement to be in effect from May 1, 1939, to April 30, 1940.

Preference in employment to be given to union men.

Hours: 8 per day, 4 on Saturday, a 44 hour week, except during July and August when there shall be a 40 hour week with no work on Saturdays.

Overtime: time and one half for work over 8 hours on five days and over 4 hours on Saturday; all work over 12 hours on any day or on Sundays or four specified holidays, double time.

Wage rate for carpenters: 85 cents per hour; foremen (who must be union members) at least 10 cents per hour extra.

For work out of the city, transportation to be paid by the employer and 15 cents per hour extra to cover expenses.

Pending the formulation of apprenticeship regulations, an employer who employs two or more journeymen may have one apprentice, an additional apprentice for every nine journeymen employed, but not more than three apprentices on any one job.

Any dispute which cannot be settled between the parties will be referred to a joint arbitration committee.

Collective Labour Agreements Act, Quebec

The following amendments to agreements have recently been made obligatory by Orders in Council and are summarized in the next article:

Bakers and Deliverymen, Quebec City and District (amendment).

Clerks and Accountants, Jonquière, Kenogami, Arvida and St. Joseph d'Alma (amendment).

Tavern Employees, Quebec (amendment).

Barbers and Hairdressers, Three Rivers (amendment).

Barbers and Hairdressers, St. Hyacinthe (amendment).

Barbers and Hairdressers, Joliette (amendment).

Industrial Standards Act

The following schedules have recently been made binding by Orders in Council and are summarized in a special article below:

SASKATCHEWAN

Jewellery Industry, Saskatoon.

Barbers, Moose Jaw.

Barbers, North Battleford.

ALBERTA

Bakers, Edmonton.

Bakers, Calgary.

COLLECTIVE LABOUR AGREEMENTS ACT, QUEBEC

Recent Proceedings Under the Act

THE Collective Labour Agreements Act which was assented to March 18, 1938, amends the Act respecting Workmen's Wages, 1937, by changing the title of the Act and by certain other changes which are summarized in the May, 1938, issue of the LABOUR GAZETTE, page 503. Amendments to the Act are noted in the LABOUR GAZETTE, June, 1939, page 576. Agreements and regulations under the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Labour Agreements Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act, made obligatory on all employers and employees in the trade, industry, commerce or occupation within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable, with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date of publication of the Order in Council in the *Quebec Official Gazette,* or its provisions may be made retroactive for a period not exceeding four months. The Order in Council may be amended or revoked at any time by the Lieutenant-Governor in Council and such amendment or revocation must be published in the *Quebec Official Gazette.* Unless otherwise stipulated, these agreements do not apply to provincial government departments or services or to work done by a third party for the provincial government under a contract providing for a scale of minimum wages. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette,* the committee is constituted a corporation. A joint committee may require certificates of competency from workers within the scope of the agreement in cities and towns of 5,000 or more and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette.* Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issue beginning May, 1938.

Recent proceedings under the Act include the amendment of eight agreements, as noted below. Requests for the extension of new agreements for work glove cutters throughout the province and for fine glove cutters, operators and blockers throughout the province were published in the *Quebec Official Gazette,* December 2; for the extension of agreements affecting plumbers at Three Rivers, the paint manufacturing industry, tannery employees and the men's and boys' hat and cap manufacturing industry, the last three agreements to be effective throughout the province, were published in the December 16 issue. In addition, Orders in Council were published in the *Quebec Official Gazette,* December 2, 9, 16 and 30, approving or amending the constitution and by-laws of certain joint committees and authorizing the levying of assessments by other joint committees, as listed below.

Manufacturing: Vegetable Foods

BAKERS AND DELIVERYMEN, QUEBEC CITY AND DISTRICT.—Two Orders in Council amending this agreement (LABOUR GAZETTE, December, 1937, page 1385, April, 1938, page 451, January, 1939, page 96, April, page 434 and August, page 861) have recently been approved and were published in the *Quebec Official Gazette,* December 9 and 16.

The territorial jurisdiction comprises the cities of Quebec and Levis and the counties of Quebec, Levis, l'Islet, Beauce, Frontenac, Montmagny, Kamouraska, Temiscouata, Rivière-du-Loup, Rimouski, Matane, Matapedia, Montmorency, but not including the Island of Orleans; it also includes establishments outside this territory, which sell a part or all of their production in the above territory. This territory is divided into two zones: zone I consisting of the cities of Quebec and Levis and

within a radius of 15 miles of them and zone II the rest of the territorial jurisdiction.

Hours in zone I: in bread and cake and pastry bakeries (including delivery workers) 62 hours per week. Hours in zone II: in bread bakeries (including delivery workers) 72 hours; in cake and pastry bakeries (including delivery workers) 62 hours.

Overtime: time and one half.

Minimum wage rates in zone I: foreman $24 per week, journeyman baker $21 when the baking reaches 30 bags of flour per man weekly; for any excess of 30 or multiples of 30 bags of flour per week, the extra journeyman required to be paid $10 per week for 1 to 10 bags of flour baked, $15 for from 10 to 15 bags, $18 for from 15 to 20 bags, $21 for from 20 to 30 bags. Should the baking be less than 30 bags of flour, the employee to be paid 90 cents per bag of flour, the wages of the foreman to be $24 for baking from 25 to 30 bags. Extra employees to be paid $3.75 per day except on Friday, for which $4 will be paid. Apprentices to be paid a minimum of $7 per week unless otherwise fixed by the joint committee. In bakeries where more than one bag of flour is made into doughnuts and rolls, $3 per bag of flour for each bag (more than one) so baked in a week to be divided among the bakers; or where a special baker is employed in the baking of doughnuts and rolls, $24 per week to be paid. In all bakeries, salesmen to be paid a minimum of $16 per week ($25 if furnishing vehicle), deliveryman $14 ($25 if furnishing vehicle), salesman's helper $7.

Minimum wage rates in zone II: foreman $19.55 per week, journeyman baker $17, when the baking reaches 30 bags of flour per man weekly; for any excess of 30 or multiples of 30 bags of flour per week, the extra bags baked to be paid at 60 cents per bag of flour baked. When more than 30 and less than 55 bags are baked per week in a bakery a schedule of weekly wages for foreman and journeyman is given in the agreement, varying from $11.35 per week for foreman and $8.80 for journeyman for 31 bags to $18.25 for foreman and $15.70 for journeyman when 54 bags of flour are baked. If less than 30 bags of flour are baked in an establishment, 70 cents per bag of flour baked to be paid. Extra employees to be paid $3.20 per day. The minimum weekly wages of apprentices to be $5.95 per week, except as otherwise fixed by the joint committee. In bakeries where more than one bag of flour is made into doughnuts and rolls, $2.55 per bag of flour for each bag (more than one) so baked in a week to be paid and divided equally among the bakers; or where a special baker is employed in the baking of doughnuts and rolls, $19.55 per week to be paid. In all bakeries, salesmen to be paid a minimum of $14.40 ($22.50 if furnishing vehicle), deliveryman $12.60 ($22.50 if furnishing vehicle), salesman's helper $6.30.

In any bakery, there shall be at least one foreman and all other employees to be bakers. Only with the consent of the joint committee may one aprentice be employed.

Manufacturing: Miscellaneous Wood Products

FURNITURE INDUSTRY, PROVINCE OF QUEBEC.—Orders in Council, published in the *Quebec Official Gazette*, December 16 and 30, amend the previous Orders in Council for this industry (LABOUR GAZETTE, December, 1937, page 1386, February, 1938, page 214, October, 1938, page 1170) by providing that from December 15, 1939, the minimum wage rates for employees (including male and female employees) and including kettlemen, shippers, labourers, maintenance men and those making machinery and building repairs to be as follows:

Minimum Hourly Wage Rates in the Furniture Industry

		Zone I cents	Zone II cents	Zones III & IV cents
	10% of employees . .	47	43	39
A further	20% " " . .	42	37	32
"	30% " " . .	40	34	28
"	20% " " . .	37	32	26
"	7% " " . .	31	26·5	22
"	7% " " . .	24	21·5	17·5
Remaining	6% " " . .	19	16	13

Trade

RETAIL STORES, QUEBEC.—An Order in Council, approved November 30, 1939, and published in the *Quebec Official Gazette*, December 9, amends the previous Orders in Council (LABOUR GAZETTE, January, 1939, page 96, March, page 336, July, page 729 and October, page 1067) by extending the period of the agreement to March 17, 1940.

CLERKS AND ACCOUNTANTS, JONQUIÈRE, KENOGAMI, ARVIDA AND ST. JOSEPH D'ALMA.—An Order in Council, approved November 25, and published in the *Quebec Official Gazette*, December 2, amends the previous Order in Council for these workers (LABOUR GAZETTE, July, 1939, page 730) by extending the period of the agreement to December 8, 1940.

In Jonquière, Kenogami and Arvida, when a civic holiday occurs on Saturday, establishments may remain open and be closed on the following Monday; in St. Joseph d'Alma employers will not be obliged to close their establishments when such civic holidays are not publicly celebrated.

Service: Business and Personal

TAVERN EMPLOYEES, QUEBEC.—An Order in Council, approved November 30, and published in the *Quebec Official Gazette*, December 9, amends the previous Orders in Council for this industry (LABOUR GAZETTE, June, 1938, page 698 and July, page 800).

Minimum weekly wages for barmen and waiters are increased $1.50 per week to $19.50 for barman and $17.50 for waiter. For beginners without experience, however, the minimum rates are unchanged at $12 for first three months and $14 for the next nine months. Extra employees employed to be paid for at least two hours for such call, at 30 cents per hour for the first 25 hours in the week and 26 cents for any hours over 25 in the week.

BARBERS AND HAIRDRESSERS, THREE RIVERS.—An Order in Council, approved December 9, and published in the *Quebec Official Gazette*,

December 16, amending the previous Orders in Council for these trades (LABOUR GAZETTE, October, 1937, page 1158, February, 1938, page 215, July, 1938, page 800, September, 1938, page 1045).

Hours for barbers and hairdressers in zones I and II with the exception of Louiseville and within two miles of it: from 8 a.m. to 12 noon on Monday, from 8 a.m. to 8 p.m. on Tuesday, Wednesday, Thursday and Friday, from 8 a.m. to 10 p.m. on Saturday and the day before holidays. Hours for barbers and hairdressers in Louiseville and a radius of 2 miles of it: from 8 a.m. to 12 noon on Monday, from 8 a.m. to 9 p.m. on Tuesday, Wednesday and Thursday, from 8 a.m. to 10 p.m. on Friday, from 8 a.m. to 11 p.m. on Saturday and days before holidays.

BARBERS AND HAIRDRESSERS, ST. HYACINTHE.—An Order in Council, approved November 25, and published in the *Quebec Official Gazette,* December 2, and corrected by a further Order in Council approved December 9, and published in the *Quebec Official Gazette,* December 16, amends the previous Orders in Council for this industry (LABOUR GAZETTE, October, 1938, page 1174, and November, 1938, page 1300).

The territorial jurisdiction is extended to include a radius of five miles from the town of Sorel and also the village of Contrecœur. The arrangement of hours in this added territory is fixed, with total hours for all barbers and hairdressers throughout the territorial jurisdiction remaining at 59 per week.

Minimum wages per week for barbers at St. Hyacinthe are now $15 per week (an increase of $1) plus 50 per cent of gross receipts in excess of $22 (formerly $20); for Sorel and within 5 miles of it, $13 per week (an increase of $1 per week); in Contrecœur village $12 per week. Certain changes are made in the schedule of prices for each operation in the different localities with prices added for the village of Contrecœur.

BARBERS AND HAIRDRESSERS, JOLIETTE.—An Order in Council, approved December 7, and published in the *Quebec Official Gazette,* December 16, amends the previous Orders in Council for these trades (LABOUR GAZETTE, January, 1939, page 96 and July, page 730) by providing that the agreement be renewed automatically from year to year subject to notice by either party.

Joint Committees

The constitution and by-laws of the joint committees set up under the following agreements were approved or amended by Orders in Council and published in the *Quebec Official Gazette,* December 2, 9, 16:

Garages and service stations, Montreal.
Bakers, Montreal (amendment).
Bakers, Quebec (amendment).

Notices were published in the *Quebec Official Gazette,* December 2, 9, and 16, that authorization was given by Orders in Council for the joint committees to levy assessments on employers and employees, parties to the following agreements:

Bakers, Quebec.
Building trades, Quebec (amendment).
Garages and service stations, Montreal.
Men's clothing, Province.
Clerks and Accountants, Jonquière.
Bakers, Three Rivers.
Building trades, Chicoutimi.
Garages and service stations, Quebec.
Plumbers, Three Rivers.
Retail stores, Quebec.
Building trades, Hull.
Funeral directors, Montreal.
Building trades, Sherbrooke.
Coal handlers, Montreal.

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Saskatchewan and Alberta

IN four provinces—Ontario, Alberta, Nova Scotia and Saskatchewan—legislation provides that, following a petition from representatives of employers or employees in any industry, the Provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zone designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. The administration and enforcement of the Act is placed in Ontario under the Industry and Labour Board, assisted by industrial standards officers; in Alberta under the Board of Industrial Relations; in Nova Scotia under the Minister of Labour, who may appoint inspectors; in

Saskatchewan under the Commissioner of Labour and Public Welfare. Reviews of these Acts and amendments have been published in the LABOUR GAZETTE, as follows: Ontario, in the issues of June, 1935, page 530, May, 1936, page 410, May, 1937, page 505, May, 1938, page 501, and June, 1939, page 574; Alberta, in June, 1935, page 504, June, 1936, page 501, June, 1937, page 640, June, 1938, page 633, and June, 1939, page 567; Nova Scotia, in June, 1936, page 604, and July, 1939, page 671; Saskatchewan, in the issue of June, 1937, page 635, May, 1938, page 507, and June, 1939, page 581. Schedules of wages and hours recently made binding by Orders in Council under these Acts are summarized below.

Similar legislation is in effect in Part II of the Fair Wage Act of Manitoba for certain industries (LABOUR GAZETTE, May, 1938, page 499, and June, 1939, page 570) and in the Industrial Standards Act of New Brunswick, 1939 (for the construction industry), in effect since August 10. Up to the end of December, however, no schedules had yet been made obligatory in these two provinces.

Saskatchewan

Manufacturing: Metal Products

JEWELLERY INDUSTRY, SASKATOON.—An Order in Council, approved December 2, and published in *The Saskatchewan Gazette,* December 15, makes binding in the city of Saskatoon and within five miles of it the terms of a schedule for the jewellery industry. The Order in Council to be in effect from December 2, 1939, "during pleasure." This schedule is similar to the one previously in effect and summarized in the LABOUR GAZETTE, November, 1938, page 1304, with these exceptions:

The previous schedule covered the construction, alteration and repairing of jewellery, clocks and watches, etc., while this present schedule is for the alteration and repair of watches only.

Hours: 47 per week from January to September inclusive and 51 hours per week during October, November and December.

The minimum wage rates are unchanged, that is $18 per week for employees with at least five years' bench experience, $15 per week for those with less experience except apprentices who are to be paid from $5 per week during first year to $12 during fifth year.

Service: Business and Personal

BARBERS, MOOSE JAW.—An Order in Council, approved December 15, and published in *The Saskatchewan Gazette,* January 2, cancels the previous Order in Council for this trade (LABOUR GAZETTE, July, 1938, page 804) and approves a new schedule for the barbering industry in Moose Jaw and within five miles of it, from January 12, 1940 "during pleasure."

Hours: except in month of December, shops may be open from 8 a.m. to 6 p.m. on Mondays, Tuesdays, Thursdays and Fridays: 8 a.m. to 12 noon on Wednesday except the Wednesday of a week in which a holiday occurs and except all Wednesdays in December, when they will be open till 6 p.m. on Wednesdays.

Minimum wage rates for employees in the barbering industry: $13 per week of 48 hours, plus 35 cents per hour for all hours in excess thereof, or 60 per cent of the proceeds taken in by the employee, whichever is greater. For those given part time or casual employment, 35 cents per hour or 60 per cent of proceeds taken in by the employee, whichever is greater.

A schedule of minimum prices which must be charged customers for each operation is also included.

BARBERS, NORTH BATTLEFORD.—An Order in Council, approved December 7, and published in *The Saskatchewan Gazette,* December 15, cancels the previous schedule (LABOUR GAZETTE, December, 1938, page 1426) and makes binding the terms of the schedule for the barbering industry in the city of North Battleford, from December 7, 1939, "during pleasure."

This schedule is similar to the one previously in effect and summarized in the LABOUR GAZETTE, December, 1938, page 1426, with this exception:

Minimum wage rates: for those given full time employment, $13 per week of 48 hours plus 35 cents per hour for all hours in excess thereof or 60 per cent of the proceeds taken in by the employee, whichever sum is greater; for those given part time or casual employment, 35 cents per hour or 60 per cent of the proceeds taken in by the employee, whichever is greater.

Alberta

Manufacturing: Vegetable Foods

BAKERS, EDMONTON.—An Order in Council, dated November 24, and published in *The Alberta Gazette,* November 30, makes binding in the city of Edmonton and within 15 miles of its main post office, the terms of a schedule governing the baking industry, from December 10, 1939, "during pleasure."

This schedule is similar to that previously in effect and summarized in the LABOUR GAZETTE, December, 1938, page 1426, September, 1938, page 1048, June, page 701, and June, 1937, page 697, with these exceptions:

The minimum weekly wage rate for foreman is left open, and for doughman, ovenman and bench hand is now $26 (an increase of $1 per week), for bread wrappers $16 (an increase of $1), all other classes of labour remaining unchanged.

BAKERS, CALGARY.—An Order in Council, dated December 11, and published in *The Alberta Gazette,* December 15, makes binding the terms of a schedule for the baking industry in Calgary and district, from December 25,

1939, to December 24, 1940, or "during pleasure."

Hours: not more than 12 per day, or 50 per week, with a daily minimum of 4 hours per day.

Overtime: time and one half. Employees to be allowed the eight statutory holidays (or one day in lieu thereof) with pay.

Minimum wage rates for week of 50 hours: doughmen and overmen $27, bench hand $25, helper $19; apprentices from $8 during first six months to $15 during third year.

Vacation: after one year's service, each employee to be given an annual paid vacation of one week.

One apprentice or helper allowed in each shop with three or less journeymen; in large shops, one apprentice or helper allowed for first three journeymen and one additional helper or apprentice for each succeeding two journeymen.

ANALYSIS OF DIRECT RELIEF STATISTICS BASED UPON THE NATIONAL REGISTRATION

REVISED figures now available from the National Registration of recipients of direct relief to which the Government of the Dominion contributes show that the aggregate number of persons on Urban and Agricultural Relief in September, 1939, was 540,731, compared with 802,652 in the preceding month, and 553,604 in September, 1938. A very substantial decline in numbers on Agricultural Relief in Saskatchewan and Alberta account for a large portion of the decrease from August, although Urban Relief had declined substantially in several provinces. The percentage decreases to September, 1939, from the same month in earlier years of the National Registration were: 2·3 per cent from 1938; 25·4 per cent from 1937; and 43·4 per cent from 1936.

Numbers on Urban Relief (including fully employable, partially employable, unemployable and non-worker type dependents) stood at 488,984 in September, 1939, a decrease from 544,817 in the preceding month, but an increase from 444,732 in September, 1938. A considerable amount of the increase compared with the previous year is accounted for by the situation in the Province of Quebec. Due to the abandonment of public works to relieve unemployment in July, 1939, the numbers on Urban Relief in that province increased substantially in August and September, without the trend of employment in the province being less favourable than in recent years. This point is of importance in understanding the reasons for the increase in numbers on Urban Relief in September, 1939, compared with the two preceding Septembers.

Persons on Agricultural Relief (farmers and their families) numbered only 51,747 in September, 1939, which represented a very substantial reduction from the 257,835 of August, 1939, and from 108,872 in September, 1938. This reduction is traceable to the effects of more favourable crops in the Province of Saskatchewan in the summer of 1939, and to a lesser degree, in the Province of Alberta as well. Figures for numbers on Agricultural Relief in Saskatchewan in September, 1939, are still subject to final adjustment.

Fully employable (but unemployed) persons among those on Urban Relief numbered 125,407 in September, 1939, a decrease of 11·9 per cent from August, 1939, but an increase of 9·4 per cent from September, 1938. However, from September, 1936, the first month of the National Registration, the total of fully employable persons had shown a reduction of 39·2 per cent.

Explanatory Notes re Tabular Statistics

The tables which follow provide a résumé of numbers of persons on direct relief throughout Canada in September, 1939, as derived from the National Registration, with some comparisons with figures for the month of September in each year back to 1936, the first month of the Registration. Direct relief in the sense here used does not include persons being provided with work on relief projects paid for at wages, even though such work was undertaken to alleviate unemployment. Direct relief is divided into Urban Relief and Agricultural Relief. Agricultural Relief refers to assistance given to resident farm operators and their dependents for human subsistence, where such farmers would normally derive their livelihood from the land which they occupy. Urban Relief refers to all persons other than farm operators and their dependents, and thus includes the unemployed and unemployable persons. "Head of Family" is used to designate a person who is socially responsible for the support of one or more dependents. An "Individual Person" is one who is neither a dependent of a head of family nor has any one dependent upon himself. The term "wife" refers to the member of a family unit who performs the housekeeping duties and "wives" are a sub-classification of dependents. "Dependents" are all who look to the head of a family for their support and, thus, "dependents" include some adult employable persons still living under the parental roof.

Subsequent to April 1, 1937, the Province of New Brunswick had substituted a works

program for direct relief, and consequently, that province does not contribute to the Registration totals on direct relief as shown in these tables, for the months after the date mentioned. Moreover, in the case of all provinces the present figures include only persons receiving relief to which the Government of the Dominion contributed financially.

* NOTE.—Number on Agricultural Relief in Saskatchewan, September, 1939, subject to revision.

TABLE I—Total of Persons on Direct Relief—gives numbers on direct relief in each of the Septembers of the National Registration, as well as for quarterly months in the most recent year, and in addition for July and August, 1939. It will be noted that this Table gives the major separation of the statistics into Urban Relief and Agricultural Relief. In each category persons of all domestic classifications are included—individuals without dependents, heads of families and dependents of heads of families.

TABLE II—Analysis of Totals on Direct Relief in September, 1939—gives a distribution by domestic status and by provinces of all persons on direct relief in September, 1939, separately for Urban Relief and Agricultural Relief.

TABLE III—Percentage Distribution by Degree of Employability of Heads of Families and Individual Persons on Urban Relief—shows these percentages for each of the Septembers of the National Registration. These figures do not include all persons falling within a specified degree of employability, for employable dependents of family heads who are available for work are likewise included when the total of fully employable persons available for work is quoted, as in Table IV—Dominion Totals of Fully Employable Persons. This latter Table gives the separation by sex, and the numbers include heads of families, individuals without dependents, and dependents of heads of families where such dependents are available for work.

TABLE V—Totals of Fully Employable Persons by Provinces—shows the provincial distribution of fully employable persons on relief in September, 1939.

Australian Conference on Youth-Adult Employment

At a conference of the representatives of the Commonwealth and State employment Research Organizations on youth-adult employment held at Canberra on December 5-6, 1939, a number of resolutions were adopted leading with immediate and post-war problems of employment.

The conference affirmed the desirability of uniform procedure being adopted by the Commonwealth and the States in connection with the suspension of contracts of apprenticeship in wartime and the subsequent return of the apprentice from active war service.

Among the other resolutions adopted were the following:

(a) That each Research Organization, keeping in view the desirability of uniformity of method as far as possible, undertakes to continue or pursue investigation into the following subjects:
  (i) The war and employment.
  (ii) The structure of junior employment in different industries and occupations.
  (iii) The wage structure of junior workers—
    (a) under awards and determinations
    (b) not under awards and determinations.
  (iv) Labour mobility and labour turnover.
  (v) Ratio of junior to adult labour required to meet present and prospective demands of industry.
  (vi) Economic and financial aspects of raising the school-leaving age, in anticipation of its adoption after the war, if not adopted earlier.
  (vii) (a) Types of employment entered by school leavers.
    (b) Placement of junior workers.
  (viii) The definition of "skilled", "semi-skilled" and "unskilled".
  (ix) The principle of training youths engaged in dead-end employment with a view to their qualification for entry into permanent forms of employment.

(b) That the Australian Council for Educational Research be invited to continue its research into the educational aspects of youth-adult employment.

(c) That each Research Organization—
  (1) Investigate the problem of the means of ensuring the closest organic collaboration between the Research Organizations and Employers' Organizations, organized labour and Youth Organizations in the States; and
  (2) Have completed and forwarded to the Research Section of the Commonwealth Bureau of Census and Statistics the plans of—
    (a) the employment and unemployment systems in the States:
    (b) the junior labour systems of the States.

INDEX NUMBERS OF RATES OF WAGES IN CANADA 1901-1939

THE report on Wages and Hours of Labour in Canada, 1929, 1938 and 1939, No. 23 in the series, published each year since 1921, not being available as a supplement to the present issue of the LABOUR GAZETTE, the table of index numbers of rates of wages for various classes of labour is given herewith in advance of the subsequent publication of the report as a supplement. Most of the reports in this series were issued as supplements to the Gazette for January, but No. 22, that for 1929, 1937 and 1938, was issued as a supplement to the LABOUR GAZETTE for March, 1939.

This table of index numbers was first published in Report No. 1, issued as a supplement to the LABOUR GAZETTE for March, 1921, and covered the period 1901 to 1920. The index number for each group in each year since 1921 has been calculated by ascertaining the percentage change in each wage rate for the current year from the rate shown for the preceding year and averaging such percentage changes. The group index for the preceding year is then adjusted according to the average change so ascertained. Until 1935 only the figures for the first six groups were averaged but in Report No. 19 for the years 1929, 1934

and 1935 all the group figures were averaged, being weighted according to the approximate number of employees in each group of trades or industry as shown by the Census of 1921 and of 1931. The weights are as follows (in thousands): building trades 143; metal trades 131; printing trades 25; electric railways 18; steam railways 161; coal mining 28; common factory labour 110; miscellaneous factory trades 363; logging and sawmilling 77.

The figures were secured in June for the building trades, logging and sawmilling, pulp and paper mills, iron and steel products including automobiles, parts and accessories. For the other trades and industries the information was secured chiefly in September. Changes in wages after that month are not reflected in the index numbers, except in a few cases.

During 1939 there were slight increases in a number of the groups while there was a fall in the average in lumbering as the number of decreases in wage rates somewhat exceeded the number of increases in this industry. In the manufacturing industries increases averaged about one per cent in the textile, clothing, food, electrical and sheet metal products industries. Slight increases appeared in nearly all of the other manufacturing industries.

* Average of previous six columns.
** Weighted according to average numbers of workers in each group in 1921 and 1931.
† Including some increases effected near the end of the year.
‡ Including a ten per cent decrease for certain classes toward the end of the year.
(a) Seven trades from 1901 to 1920, eight from 1921 to 1926, nine for 1927 to 1938, 13 cities to 1927, 14 cities to 1930, thereafter 31 to 42 cities.
(b) Five trades from 1901 to 1926, four for 1927 to 1939.
(c) Two trades from 1901 to 1920, four for 1921 and 1922, six from 1923 to 1939.
(d) Two classes from 1901 to 1920, five classes 1921 to 1939.
(e) Twenty-three classes.
(f) Four classes 1901 to 1920, twelve classes 1921 to 1939.
(g) The number of samples (and industries) increased from time to time since 1920; machine operators, helpers, etc., also included.
§Subject to slight revision.

PRICES, RETAIL AND WHOLESALE IN CANADA, DECEMBER, 1939

Cost of living, prices of staple articles and index numbers

IN retail prices the cost per week of a list of certain staple foods, fuel and lighting and rent entering into a family budget was slightly lower at the beginning of December than at the beginning of November due to the lower cost of foods while in wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics continued upward week by week throughout December due mainly to higher prices for grains, livestock and certain raw textiles.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was $8.77 at the beginning of December as compared with $8.83 for November and $8.07 for the beginning of September. Changes as compared with the beginning of November were mostly of a minor character the most important being declines in the cost of meats, lard, flour, rolled oats and potatoes and advances in butter, cheese, tea and coffee. Comparative figures for the cost of the list of foods for certain earlier dates are $8.33 for December, 1938; $8.78 for November, 1937; $6.67 for March, 1933 (the low point in recent years); $11.83 for December, 1929; $11 for December, 1921; $16.92 for June, 1920 (the post war peak); and $7.96 for December, 1914. Including the cost of certain fuels and rent with that of foods the total cost was $17.72 at the beginning of December as compared with $17.77 for November; $16.93 for September; $17.25 for December, 1938; $17.58 for December, 1937; $15.41 for June, 1933 (the low point in recent years); $22.11 for December, 1929; $21.49 for December, 1921; $26.92 for July, 1920 (the post war peak); and $14.26 for December, 1914. Both fuel and rent were practically unchanged in the month under review from the level of the previous month.

In wholesale prices the Dominion Bureau of Statistics weekly index number continued the upward movement in progress since the middle of August. The figure for the week ended December 29 was 82·2 as compared with 80·2 for the week ended December 1, 79·0 for that ended November 3 and 71·9 for that ended August 18. The latest figures available on a monthly basis are for November when the index was 80·3 as compared with 73·3 for December, 1938; 82·7 for December, 1937; 63·5 for February, 1933 (the low point in recent years); 96·0 for December, 1929; 96·4 for December, 1921; 164·3 for May, 1920 (the post war peak); 66·4 for December, 1914; and 66·1 for August, 1914. The most important price changes during December were increases in the prices of grains, livestock, raw cotton, raw silk, certain cotton fabrics, pig iron and steel sheets and declines in tin ingots, cured meats, eggs, lard and cheese. The Vegetable Products group advanced 7 per cent during the month under review, the Fibres and Textile Products group about 4½ per cent and the Chemical Products group about 4 per cent. Advances in other groups were slight.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of December of seventy-two stable foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The cost of a list of staple foods, fuel and lighting and rent, entering into the budget of a family of five is calculated in terms of the average prices in the cities for which reports are received, and includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication

of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of food tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft soal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the calculation serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an verage family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the list of foods entering into the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-romed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in Other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended December 29, 1939; monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(*Continued from page 78*)

from an average price of 28·7 cents in November to 27·8 cents in December; fresh pork from 23·8 cents per pound to 23·1 cents; breakfast bacon from 31·7 cents per pound to 30·4 cents and boiled ham from 58·3 cents per pound to 57·5 cents. Lard was lower in price in many cities and the Dominion average declined from 13·7 cents per pound in November to 13 cents in December. The price of fresh eggs declined in many localities particularly in Ontario and British Columbia and advanced in the Maritime provinces. The Dominion average price for fresh grades was only slightly lower at 41·5 cents per dozen. Cheese averaged ½ cent per pound higher in December at 23·4 cents per pound. Bread has been unchanged in price at 6·5 cents per pound since June. Flour was fractionally lower at 3·3 cents per pound at December 1 as compared with 3·4 cents for November and 3·5 cents for October. Rolled oats also were fractionally lower at 5·2 cents per pound. Potatoes averaged $1.64 per hundred pounds as compared with $1.66 for November. Granulated sugar averaged 7·1 cents for December 1 and 7·2 cents for November 1. The price of tea averaged 2 cents per pound higher at 63·5 cents. Anthracite coal was higher in several localities the Dominion average being up from $14.83 per ton to $14.89.

The following are the prices per ton reported for Welsh coal "cobbles" and "French nut" at the beginning of December; Halifax $17.50; Charlottetown $14.50-$15.50; Saint John $14.50; Quebec $14; Three Rivers $15.50 and $14.50; Sherbrooke $14.75; St. Hyacinthe $15; Thetford Mines $17.50; Montreal $15 and $15.25; Ottawa $16.75; Kingston $16; Belleville $16.50; Peterborough $17.50; Oshawa $15.50; Toronto $15; St. Catharines $15.75; Hamilton $15.50; Galt $16-$16.50; St. Thomas $16; Timmins $19.75; Cobalt $20; Port Arthur $18; Fort William $18; Winnipeg $20.50.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices, in Great Britain and several of the principal commercial and industrial countries are included in "Prices in Canada and Other Countries, 1939" which will be isued shortly as a supplement to the LABOUR GAZETTE.

Since these monthly notes are all compiled from British and foreign sources the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the LABOUR GAZETTE. In Great Britain, both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

In most of the continental European countries some measure of control over prices and distribution has been put in force with consequent effect upon prices. In some of these countries the publication of price data has been suspended and in the case of Germany direct information will henceforth be unobtainable although information contained in the official publications of neutral countries and in the press will be noted.

Great Britain and Northern Ireland

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 117·2 for November, as compared to 110·9 for October. As in the two previous months each of the eleven groups making up the "all items" index showed increases. The index for the combined food and tobacco groups was up 5·4 per cent for the month, there having been increases of 13·2 per cent in the prices of cereals, 3·3 per cent in those for meat, fish and eggs and 1·7 per cent in the prices of other foods and tobacco. The index for the combined industrial materials and manufactures groups showed an increase of 5·9 per cent for the month the important changes in its subgroup indexes being in "wool" and in "other textiles" which increased 8·6 and 8·8 per cent respectively and in "iron and steel" which increased 8·7 per cent. Comparing the "all items" index for November, 1939, with that for November, 1938, we find that there has been an increase of 27·3 per cent.

COST OF LIVING.—The Ministry of Labour index number on the base July, 1914=100, was 173 at the beginning of December as compared with 169 a month earlier, an increase of 2·4 per cent for the month. The index of food prices increased from 154 to 157 or 1·9 per cent, due to increases in the retail prices of bacon, eggs, fish, cheese and margarine. The index of rents was unchanged, that for clothing prices increased from 235 to 245 or 4·2 per cent, the index of prices of fuel and lighting materials increased 4·0 per cent to 195 while that for sundries increased 1·3 per cent to 189.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number, on the base 1926=100, was 79·2 for November as compared with 79·4 for October and 79·1 for September. The decline of 0·3 per cent in the index for November as compared to that for October is the first since August when the index was 75·0. The largest decrease in the indexes of the subgroups was one of 1·4 per cent in foods while that for sundries declined 0·8 per cent. The index for Textile products increased 1·2 per cent while that for house furnishings increased 0·7 per cent. Changes in the remaining subindexes were all less than half of one per cent. In November, 1938, the all commodities index was 77·5, the corresponding figure for 1939 being 2·2 per cent higher.

COST OF LIVING.—The index number of the Industrial Conference Board, on the base 1923=100, was 85·7 for November, 1939, as compared with 85·8 for October, a decrease of 0·1 per cent for the month. The decline in the index was due to a decrease in the price of food the index for which declined 0·6 per cent. The index of fuel and lighting materials prices increased 0·5 per cent, that for clothing 0·4 per cent and that for rent 0·1 per cent. The index of prices of sundries was unchanged. The general index for November, 1939, was 0·1 per cent higher than that for the corresponding figure for 1938.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Supreme Court of Canada Awards Pension to Civic Employee Whose Claim was not Properly Considered

IN a unanimous judgment on October 30, the Supreme Court of Canada, while disagreeing with the grounds on which the original decision was given, reversed the judgment of the Quebec Court of King's Bench and restored that of the Superior Court of the District of Montreal with costs to the appellant throughout, allowing the application of a fireman employed by the City of Montreal for superannuation and pension in accordance with a city by-law.

The by-law provides for pensions for permanent employees of the City who become unable to perform their duties "by reason of a chronic or incurable disease or of permanent infirmity contracted as a result of or on account of the discharge of....municipal duties." The decision as to eligibility lies with the Executive Committee and the right to pension only arises when this decision is made.

On July 23, 1931, the appellant resigned his position on the grounds of ill health and requested a medical examination, which was given on July 27 by two medical officers of the Fire Brigade who reported to the Committee that he was still fit to perform his duties. The applicant made repeated inquiries but not until some months later, in 1932, was he informed by the Committee that his application had been refused. In the meantime he had been required to return his uniform and treated as if his employment had ended. He had no opportunity of supporting his application before the Executive Committee. No machinery is provided for working out the rights of the parties. The man was dismissed although he was declared not unfit, and to establish his status he was forced to bring action.

The trial judge referred to Article 50 of the Code of Civil Procedure under which any politic and corporate body is "subject to the superintending and reforming power, order and control" of the Superior Court as provided by law. In his opinion the physicians' failure carefully to examine the plaintiff was a grave injustice and the City's refusal of pension after acceptance of the resignation for reasons of health was abuse of power. He found as a fact that the plaintiff suffered at least since 1928 from diseases contracted in discharge of his duties which rendered him unable to perform them. He gave judgment for the plaintiff and rejected the contention that the Court had no authority to review the decision of the Executive Committee. It was on this ground, however, that the Court of King's Bench allowed the appeal of the defendant and dismissed the action.

The Supreme Court judgment was given by Chief Justice Duff. He considered that the trial judge had no power to determine the state of the appellant's health. This issue of fact was for the Executive Committee and had the decision of the Committee been made after proper consideration of the claim it was not open to review on the merits by any Court. But since the decision was given without a fair opportunity for the applicant to support his claim, then the Court was in a position to examine its merits and the City could not set it up as a bar to the claim. In this case the Supreme Court considered there was "either deliberate deceit or gross inattention to plain duty" on the part of the Executive Committee and the claim was allowed. The Court quoted Lord Loreburn as to the duty of an administrative body charged with an inquiry into facts the result of which is to affect the civil rights of parties, "they must act in good faith and fairly listen to both sides.... They can obtain information in any way they think best always giving a fair opportunity to those who are parties to the controversy for correcting or contradicting any relevant statement prejudicial to their view." *Mantha v. Montreal* (1939) 4 Dominion Law Reports 425.

Joint Committee under Quebec Collective Agreements Act has no Power to Exempt an Establishment from Legal Rates

On November 28, Mr. Justice Mackinnon of the Superior Court of Montreal awarded a workman $272.78 with interest and costs from July 10, 1939, in an action for recovery of the balance of wages due at the rate fixed by a collective agreement between the International Ladies' Garment Workers' Union and the Montreal Manufacturers' Council which was made legally binding on the whole industry. The agreement fixed an hourly rate of 75 cents for an underpresser and the plaintiff had been paid only 25 cents from January 6 to July 4, 1939, on which date he was dismissed by the defendant.

The order in council legalizing the agreement gives the Joint Committee set up to administer it power to determine for employees whose production is below normal a special rate of wages below the ordinary minimum for any class of workers. In this case such a rate was permitted for all workers in the defendant's factory and defended on the

ground that the production of the employees as a whole was below that of ordinary workers and therefore every employee in the establishment could be paid less than the regular minimum rates. There was no evidence to show that the Joint Committee made any investigation to determine that production was below normal.

Before this agreement was legalized, a meeting was held on January 30, 1936, at Laprairie, where the plant was established, at which were present the defendant, representatives of the Joint Committee, an officer of the Quebec Department of Labour, a delegation representing the town of Laprairie and the federal member for the constituency. The defendant represented that he could not continue to carry on business if he had to pay the rates fixed in the agreement and it was urged by others that should his business cease to function his employees would be added to the relief rolls. The Joint Committee therefore agreed to the defendant's paying considerably less than the ordinary minimum rates. There was no evidence to show that the arrangement was made because the worker's production was below normal. The order in council came into effect on September 18, 1937, and the defendant continued to pay the lower rates.

The Court held that the Joint Committee had no power to determine a special rate for all the workers in the plant but could do this only for individual employees when it was satisfied that they were unable to do a normal amount of work. The plaintiff was therefore entitled to the minimum wage provided in the decree for an underpresser and not a piece presser as the plaintiff contended he was. His acceptance of the wage paid did not waive his right to claim the legal rate.

The claim of damages for dismissal without cause was not allowed as the evidence showed there was no work for the man to do and the industry was a seasonal one. *Hebert v. Levin*, Superior Court of Montreal, November 28, 1939.

County Court Grants Injunction and Damages for Picketing Toronto Restaurant

On November 23, Judge Denton of the County Court of York gave judgment for the plaintiffs, restaurant operators in Toronto, declaring to be a nuisance the picketing of their premises for five days in July, 1939, by two of the defendants. The third defendant, as secretary of the union, had organized the picketing. All three defendants were members of the Cafeteria and Restaurant Employees International Alliance, Local 168. The Court granted a permanent injunction restraining "picketing, watching or besetting" of the plaintiff's premises, also damages for loss of sales estimated at $13 on comparing sales during the days that picketing occurred with sales on days when there was no picketing, and costs.

The Court found that the defendants had asked the plaintiffs, who refused, to sign an agreement with the union to employ only union men at union wages and hours and that the plaintiffs were warned, in effect, that if they did not sign the place would be closed. Picketing was then begun, the two men walking back and forth in front of the plaintiff's premises, carrying a sign reading: "Unionists and Friends, the Golden Grill is Unfair to Organized Labour." Although the plaintiffs originally alleged defamation and there was doubt as to the right of the County Court to hear that part of the action, it was abandoned at the trial.

Since the picketing was in furtherance of the threat "to close" the restaurant, Judge Denton held that it constituted a civil wrong. As to whether picketing in itself was a nuisance as claimed by the plaintiff, the Court felt bound to adopt the decision of the Manitoba Court of Appeal in *Allied Amusements vs. Reaney* (LABOUR GAZETTE, 1937, p. 1291) in which Mr. Justice Robson followed *Lyons v. Wilkins*, an English case decided in 1899, in which Lord Lindley held:

> . . . to watch or beset a man's house with a view to compel him to do or not to do what is lawful for him not to do or to do is wrongful and without lawful authority, unless some reasonable justification of it is consistent with the evidence. Such conduct seriously interferes with the ordinary comfort of home existence and ordinary comfort of the house beset and such conduct would support an action on the case for nuisance at common law.

The following paragraph from the judgment of Macdonald, C. J. A. in *Schuberg* v. *Local International Alliance Theatrical Stage Employees* (LABOUR GAZETTE, 1927, p. 339), an action decided by an equal division of the British Columbia Court of Appeal, which was quoted with approval by Mr. Justice Robson was also quoted by Judge Denton:

> Even assuming that they conducted themselves in a peaceful manner, the question is, had they the right to bring about what was virtually a boycott of the Plaintiff? The Defendants' object in distributing the handbills and in parading with banners, was unquestionably to prevent persons from patronizing the theatre. No matter how peaceably this may have been done, and even admitting the absence of actual malice, yet I think it was an actionable wrong done by these Defendants, in combination, with the object of compelling the Plaintiff by inflicting loss upon him to do something from which he had a legal right to abstain from doing.

There was reference also to an unreported judgment of Judge O'Connell of the County Court of York County in another case of picketing a Toronto restaurant (Johns vs. Dimoff et al, June, 1936) when it was declared to constitute a nuisance entitling the plaintiff to damages and an injunction. Judge O'Connell was quoted, in part, as follows:

> The besetting and watching of the premises were not carried on merely for the purpose of obtaining or communicating information. Its object was to compel the Plaintiff to employ none other than members of a Trade or Labour Union, and the means by which the Defendants sought to accomplish this object was to adopt this system of picketing in a manner to influence the customers of the restaurant to remove their patronage from the place, interfere with the trade and business of the Plaintiff, and to adversely affect the revenue of the restaurant, so that under this compulsion she should be compelled to comply with the Defendants demand to employ none but Union Labour, although no doubt the motive was to promote the trade interests of the Defendants. . . .
>
> There is no doubt in my mind that this action of the Defendants was productive of considerable worry and annoyance to the Plaintiff, and seriously interfered with her comfort and enjoyment of her place of business, and in my opinion constituted a nuisance. . . . Consequently, the Plaintiff is entitled to recover damages and to an injunction.

Counsel for the defendants cited an Ontario and an Alberta case but the Court considered that the Manitoba and British Columbia judgments dealt with the question fully. In *Bassel's Lunch Ltd.* v. *Kick* (1936) which did not come to trial but in which on a motion for writs of attachment for contempt of Court by disobeying an injunction restraining picketing Mr. Justice Kingstone of the High Court of Justice of Ontario remarked:

> The law in Ontario is reasonably clear and does not forbid peaceful picketing as such.

In *Dick* v. *Stephenson* (1923) Mr. Justice Ives of the Alberta Supreme Court was quoted as saying:

> There is no doubt that the Defendants agreed together to picket the City Cafe when at the special meeting the resolution was adopted. And, at the time, it must have been in the mind of the Defendants that the result of such picketing would reduce the cafe business. Indeed they could have no other object than that such reduction would compel a compliance with the Union terms of employment. But there is no evidence that any malice actuated the Defendants or that injury to the Plaintiff was their primary object or intent. They did legally what they were legally entitled to do. The public patronage of the Plaintiff's business was entirely voluntary. His customers could lawfully cease their patronage at any moment and were induced to do so by the Defendants in an effort to advance the legitimate interests of themselves and other members of the Union.

Stoycheff et al v. *Peroff et al,* County Court of the County of York, November 23, 1939.

Quebec Court Continues Injunction Against Picketing and Awards Damages

On December 9, 1939, Mr. Justice Duranleau of the Superior Court of the District of St. Hyacinthe not only confirmed and permanently continued the injunction against picketing made by Mr. Justice Forest of the same Court on September 25, 1937 (LABOUR GAZETTE, 1937, p. 1292) but he ordered the defendants, members of the Syndicat Catholique et National du Textile de Bagot to pay the plaintiff company damages estimated at $1,200 with interest from the date of judgment, the defendants to bear costs of the action throughout. The claim was for $1,999.99.

For about four years the plaintiff had operated a silk mill in Acton Vale employing some 200 persons, when in August, 1937, the defendants among other employees organized a strike for higher wages and union recognition. The defendants were alleged to have watched the factory by day and night, erected shelters for themselves and put up barbed wire and used violence to prevent any workers from entering the factory and raw materials from being taken in, with the result that the factory was closed for a month. Several of the defendants had been individually charged with assault on officials of the company. Some had been convicted, in other cases actions were still pending.

The Court refused to accept the defence that even if there had been isolated acts of violence and intimidation, which was denied, the damages suffered, if any, were not a result of these acts but of the strike which was organized according to the rules of the union which had been registered under the Professional Syndicates Act and that the wages and working conditions in the plant, the refusal of the company to accede to their reasonable demands and to recognize their right to organize justified the strike.

It was held that although workers in order to better their conditions have the right to strike and to persuade other employees to do likewise, they are liable to damages for such acts as spying, violence and intimidation for the purpose of preventing others going to work and of paralysing business. Although the plaintiff was not entitled to be reimbursed for all the damages suffered through the stoppage of work, the Court estimated at $1,200 the loss suffered by reason of the illegal acts. *Acton Vale Silk Mills Ltd. v. Leveille et al,* Superior Court, District of St. Hyacinthe, December 9, 1939.

Ontario Court Rules Notice of Dismissal must be Reasonable having Regard to all Circumstances

The Ontario Court of Appeal on November 23 reversed the judgment of Mr. Justice Roach dismissing an action for wrongful dismissal of a man formerly employed as a vulcanizer by a dealer in automobile supplies. The appellant in Toronto received from the respondent in Schumacher, Ontario, an offer of employment "for the winter months (6 months) at $20 per week and the other 6 months at $25 per week." The offer was accepted by telephone, the appellant having stated that he would not be willing to make the trip except for a permanent job for at least a year to which the respondent replied that there was no need to worry about that as he had a man working for him who had been there five years. After four weeks the appellant was dismissed with one week's notice.

The trial judge considered that as the wages were to be paid by the week he was bound to hold that the hiring was a weekly one and, therefore, that the appellant was entitled only to a week's notice. The Court of Appeal held that the effect of the evidence, while showing that there was no definite arrangement for a year, was to destroy any presumption of a weekly hiring that might be derived from the offer of the weekly payment of wages and that the hiring was in fact for an indefinite term. As there was no evidence of any custom about the length of notice in such cases the Court decided that two months' notice would be a reasonable notice to terminate the contract. The appeal was, therefore, allowed and judgment given for the appellant for $187.50 and costs. *Mitchell v. Sky* (1939) 4 Dominion Law Reports, 712.

Saskatchewan Truck Driver Employed on Hourly Basis but Paid Weekly Held Not Entitled to Week's Notice

Judge Bryant of the District Court of Saskatoon on November 28 disallowed with costs the action of a driver dismissed without notice on July 29 at the age of 58 after working since about 1922 for the defendant company. The plaintiff was hired first as a teamster and then to drive a hard-wheeled slow truck. He was paid weekly, the amount being determined by the number of hours worked at the rate agreed on from time to time. Since commencing work he had once been laid off for some seven months and on another occasion he had left to work elsewhere for a year and a half. As drivers were called by a rotation system commencing work when their numbers appeared on "the board," the plaintiff reported for work every day, sometimes working a full day, sometimes less, and latterly on a fast truck was paid weekly at 43 cents an hour from the time he commenced work each day until 6 o'clock whether he worked all that time or not. He received time and a half for overtime and was given no holidays whereas other employees of the company who were paid a monthly or weekly wage were not paid for overtime and were given annual holidays. The plaintiff claimed $25 for breach of contract and for damages suffered through unemployment or, in the alternative, the same sum in lieu of a week's notice.

The case turned on whether the plaintiff was hired by the week and entitled to a week's notice or whether he was hired by the hour. Relying on two English cases, *Warburton v. Heywood or Heyworth* (1880) and *Parkin v. South Hetton Coal Company* (1908), the trial judge concluded that there was no contract for a weekly hiring at weekly wages and the plaintiff was therefore not entitled to a week's notice or in the alternative payment of an average week's salary. In one of these cases where a woman weaver was paid by the piece and all work done was booked once a week and paid for three days later it was held that there was not a weekly hiring at weekly wages but the price for the work done and booked was earned and due though not payable when the weaver left on the reckoning day. In the other case the wages of a putter in a colliery depended on the amount of work done each day and Lord Alverstone C. J. stated: "The wages in respect of each shift became due as they were earned *toties quoties,* on the completion of successive shifts, although not payable until the end of the fortnight." He did not infer a fortnightly hiring.

Counsel for the plaintiff cited a case (McDonald v. Swift Canadian Company, Ltd.) where the Supreme Court of Nova Scotia in 1936 held that when the only indication as to the duration of a hiring is weekly payment of wages that alone should be taken to prove that the hiring is by the week. Mr. Justice Fullerton of the Manitoba Court of Appeal came to the same conclusion in 1924 (Fiddes v. Famous Players). The plaintiff's counsel also quoted an English case, *Gregson v. Watson* (1876) where a factory winder was paid weekly for the number of sets wound during a week. Although a rule of the factory required 14 days' notice in writing before leaving employment, the service was held to be weekly. The Court distinguished this from the present case where the plaintiff was not continuously employed at any time for the week and he was paid not for the work accom-

plished but for the number of hours he was employed, and expressed the opinion that "his employment did not constitute a full week's work at a weekly wage."

It was suggested by the plaintiff's counsel that the best ground on which the defendants could stand was to maintain that it had been a daily hiring. On this point, relying on two early English cases, *Rex v. South Killingholme (Inhabitants)* (1830) and *Rex v. Lydd (Inhabitants)* (1824), the Court concluded that there was no daily hiring, it appearing to depend on whether there was an obligation to employ. When the defendants did not have the work and did not choose to employ him they could decline to do so. The Court was of the opinion that "the plaintiff was an occasional servant employed from time to time at an hourly wage." *Johnston v. MacCallum et al.* (1939) 3 Western Weekly Reports 641.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME XL] FEBRUARY, 1940 [NUMBER 2

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment showed its customary seasonal contraction at the beginning of January, 1940, but the loss was below the average in the experience of the last nineteen years. The firms furnishing data laid off some 63,141 workers at the date under review, or 5·3 per cent of their December 1 payrolls, as compared with an average decline of about seven per cent recorded at January 1 in the years, 1921-1939. Returns were tabulated by the Dominion Bureau of Statistics from 11,891 employers, whose staffs aggregated 1,135,400, as compared with 1,198,541 in the preceding month. The index (average, 1926=100) stood at 116·2, compared with 122·7 at December 1, 1939, and 108·1 at January 1, 1939. The crude indexes for the beginning of January in preceding years were as follows: 1938, 113·4; 1937, 103·8; 1936, 99·1; 1935, 94·4; 1934, 88·6; 1933, 78·5; 1932, 91·6; 1931, 101·7; 1930, 111·2; 1929, 109·1; 1928, 100·7 and 1927, 95·9.

After correction for seasonal influences, the January 1, 1940, index was 120·7, as compared with 119·8 at December 1, 1939; the seasonally-adjusted index for January was higher than in any other month since September, 1929.

Unemployment in Trade Unions.—Reports were forwarded to the Department of Labour at the beginning of January, 1940, by 1,967 local trade unions with an aggregate of 251,282 members, 28,555 or 11·4 per cent of whom were unemployed, contrasted with percentages of 9·7 at the beginning of December, 1939, and 16·2 at the beginning of January, 1939.

Employment Office Reports.—Reports received from the offices of the Employment Service of Canada indicated a decline from November, 1939, as well as from December a year ago as shown by the average daily placements effected, construction and maintenance and logging being mainly responsible for the decrease under the first comparison and farming and construction and maintenance under the second. Vacancies in December, 1939, numbered 25,395, applications 55,709, and placements in regular and casual employment 24,300.

Prices.—In retail prices the cost per week of a list of staple foods, fuel and lighting, and rent entering into a family budget was $17.70 at the beginning of January, 1940, as compared with $17.72 for December, 1929; $16.93 for September, 1939; $17.18 for January, 1939; $17.48 for January, 1938; $15.41 for June, 1933 (the low point in recent years); $22.17 for January, 1930; $21.52 for January, 1922; $26.92 for July, 1920 (the post war peak); and $14.49 for January, 1914. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 changed little during January, 1940 and was 82·2 for the week ended February 2, 1940, the same as for the week ended December 29, 1939. Comparative figures on a monthly basis are 81·7 for December, 1939; 72·4 for August, 1939; 73·2 for January, 1939; 83·8 for January, 1938; 81·9 for January, 1937; 63·5 for February, 1933 (the low point in recent years); 95·3 for January, 1930; 97·1 for January, 1922; 164·3 for May, 1920 (the post war peak); and 64·9 for January, 1914.

Business Statistics.—The latest statistics available reflecting industrial conditions in Canada are given in the table on page 94. The index of the physical volume of business in December, 1939, continued at the relatively high level of the preceding two months and was 15 per cent higher than in December, 1938. Of the five principal groups included in the calculation mineral production and electric power output were considerably lower than in the preceding month while the indexes of construction and distribution indicated greater activity and the level of manufacturing activity was unchanged. In the mineral production group exports of copper and zinc, the imports of bauxite, as well as the production of coal were substantially lower in December than in the previous month. In the manufacturing group in the same comparison

* Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† For the week ended February 2, 1940.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending January 27, 1940, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending January 27, 1940, December 30, and December 2, 1939; January 28, 1939, December 31 and December 3, 1938. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation. (9) Excluding gold.

greater activity in the tire industry was indicated by the increased volume of imports of crude rubber. Greater volume in manufacturing was also indicated by the figures for the textile industry, by the exports of planks, boards and wood-pulp as well as in the manufacture of sugar. Newsprint was made in smaller volume than in November and the output of pig iron and steel were also lower. In the construction group improvement was indicated by the figures for contracts awarded and for building permits. In distribution, trade employment and carloadings were lower than in November while the figures for external trade indicated greater volume. All of the above principal groups were considerably higher in December, 1939, than in December, 1938, except construction which was slightly lower. Information available for January, 1940, shows employment, earnings of the Canadian National Railways and the value of contracts awarded at a lower level than in December but higher than in January, 1939, while the number of cars of revenue freight was greater in both comparisons.

Strikes and Lockouts.—The number of strikes and lockouts during January was six, involving 919 workers, with time loss of 6,861 man working days, as compared with 11 disputes during December, 1939, involving 1,570 workers and causing time loss of 20,679 days. Most of the time loss in January was due to strikes of gold miners at Pioneer Mines, B.C., and electric wire workers at Brockville, Ont. In December important disputes were those involving gold miners at Pioneer Mines, B.C., coal miners at Estevan, Sask., fish handlers at Lockeport, N.S., knitting factory workers at Brantford, Ont., and felt factory workers at Guelph, Ont. In January, 1939, while there were 10 disputes recorded, involving 1,228 workers and causing 8,047 days' time loss, the only important dispute involved coal miners at Blairmore, Alta. Of the six disputes recorded for January, 1940, four were terminated during the month, one resulting in favour of the employer and one in favour of the workers involved, while a compromise settlement was reached in one case and the result of one dispute was recorded as indefinite. Two disputes, involving approximately 480 workers, were recorded as unterminated at the end of January. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the past month the findings of the Board of Conciliation and Investigation which dealt with a dispute between various grain elevator companies at the Head of the Great Lakes and their employees were received by the Department of Labour.

Applications for the establishment of Boards were submitted to the Department in the case of five industrial disputes and one Board was established by the Minister of Labour, while the personnel of a Board established during the preceding month was completed.

A full account of these proceedings under the Act will be found at page 101.

Annual Report of Dominion Department of Labour

The report of the Deputy Minister of Labour, Mr. W. M. Dickson, for the fiscal year ending March 31, 1939, has recently been issued. In reviewing the work of the Dominion Department of Labour during the year the report gives attention to the administration of the following statutes: Labour Department Act; Conciliation and Labour Act; Industrial Disputes Investigation Act; Government Annuities Act; Employment Offices Co-ordination Act; Technical Education Act; Combines Investigation Act; and The Unemployment and Agricultural Assistance Act, 1938. Other departmental activities covered in the report include the administration of the Fair Wages Policy of the Government of Canada and the work arising out of Canada's relations with the International Labour Organization.

Statistics of relief recipients for December

The grand total of all classes of persons on urban and agricultural relief across Canada in December last was 625,000, an increase of 6·9 per cent from the month of November. These figures were released by the Honourable Norman A. McLarty, Minister of Labour, and are the preliminary results from the registration of all direct relief cases, carried out for the Department of Labour by the provinces and municipalities in December. The grand total for December, 1939, compared with the same month of 1938, showed a decrease of 30·3 per cent, while compared with December, 1937, the Dominion figure was down by slightly over one-third: both urban and agricultural relief showed decreases from a year ago. December figures invariably show an increase over November, but this increase in 1939 was less than in previous years. Thus, in 1938, December increased by 13·9 per cent over November, and in 1937 the increase was

9·2 per cent. In last December, while numbers on urban relief increased, numbers on agricultural relief declined.

Unemployed but fully employable persons on relief in December this year numbered 145,000, an increase of 9·5 per cent from the revised November total, compared to an increase of 13·4 per cent from November, 1938, into the following December. The figure for December this year showed a decrease of 10·7 per cent from December a year ago, and a decrease of 5·8 per cent from December, 1937.

A total of 550,000 persons were receiving non-agricultural relief in December, an increase of 8·6 per cent from the corrected figures for the previous month: December, 1938, had shown a 13·0 per cent increase over November. This category includes all totally unemployable, partially employable and fully employable persons, together with all dependents of family heads. This aggregate showed a decrease of 9·0 per cent from the figure for December, 1938, and a decrease of 5·2 per cent from the figure for December two years ago.

Following payment of the bonus awards under the Prairie Farm Assistance Act, the number of farmers and members of their families in receipt of agricultural relief across Canada declined in December compared with November, the reduction being accounted for by Saskatchewan. The Dominion total continued to show a major decline from the year before, following improved crop conditions in 1939 in the Prairie Provinces. A total of 16,000 farmers who, together with their dependents, accounted for a farm population of 75,000 were reported as receiving agricultural relief for subsistence in December. The Dominion total on agricultural relief in December, was down by 4·5 per cent from the revised November figure, 74·3 per cent lower than in December, 1938, and 80·1 per cent less than in December, 1937. In the Province of Saskatchewan, while December showed a decrease of 15·6 per cent from the reduced total for November this year, it registered a decrease of 82·1 per cent from December one year ago, and a decrease of 86·4 per cent from December, 1937. The Saskatchewan total on agricultural relief still represented about 60 per cent of the Dominion total.

Wartime Prices Board revokes order fixing price on certain grades of wool

The Wartime Prices and Trade Board announced that after January 27, the maximum price fixed on quarterblood fleece and pulled wools of 44's to 50's quality (45 cents per pound) will no longer be in force. This is in accordance with an order issued on January 19. The new order of the Board revokes the order of November 23, 1939, setting a maximum price for these grades (LABOUR GAZETTE, December, 1939, page 1202). The first wool order has been revoked as its purpose has been fulfilled, namely, to maintain the flow of these wools into manufacturing channels, and at the same time to safeguard the majority of the trade which had previously released extensive holdings at prices suggested by the Wool Administrator.

Dominion-Provincial Youth Training Conference

With a representative attendance of officials of the Dominion and Provincial Governments engaged in Youth Training work, the conference called by the Hon. Norman A. McLarty, Minister of Labour, met in Ottawa on January 22-24 in a discussion of matters relative to this field. Featuring the sessions were discussions on courses and projects, such as air mechanics, which were of special significance in the national war effort.

In this respect, the question of the rehabilitation of soldiers into civilian life was dealt with at one of the general sessions. The facilities for this work available under the Youth Training set-up were reviewed, and while no formal resolution was adopted it was considered that the practical experience of the Youth Training group "places a special responsibility upon it to give whatever help is possible."

At a general session, the conference unanimously adopted a resolution on "Youth Training and the War Effort" which declared that one of the main objectives in all Youth Training projects would be to emphasize to young Canadians:

1. The inherent value of the democratic method as opposed to the dictator way of life in human relations.
2. The responsibilities which devolve upon every citizen living in a state which has chosen to follow that course.

Accordingly, it was resolved that "all Youth Training instruction should informally convey as well as formally teach, the value of the type of citizenship in which we believe and toward which we are striving."

The conference conducted its discussions in sections dealing with various phases of Youth Training work. Presiding over the general sessions was Dr. G. F. McNally.

The rural session, emphasizing wartime requirements in quality and economy of production as well as the enrichment of rural life, was presided over by Mr. R. D. Ramsay, of the University of Saskatchewan. The Women's Urban Section and the Men's Urban Section were presided over respectively by Mrs. W. J. Lindal, Dominion Adviser, Winnipeg, and

Colonel F. T. Fairey, Director of Technical Education, British Columbia. The Chairman of the Aircraft Mechanics Section was Mr. J. F. Marsh, Deputy Minister of Labour of Ontario, while the Student Aid Section was presided over by Rev. J. A. Murphy, St. Dunstan's University.

Among others who participated in the various discussions were: Hon. N. O. Hipel, Minister of Labour, Ontario; Mr. J. M. Pigott, Pigott Construtcion Co., Hamilton, (Dominion Adviser); Mr. R. J. Tallon, Secretary-Treasurer, Trades and Labour Congress of Canada, (Dominion Adviser); Hon. Oscar Drouin, Minister of Municipal Affairs, Quebec; Mr. Louis Coderre, Deputy Minister of Municipal Affairs, Quebec; Mr. L. Roy, Deputy Minister of Agriculture, Quebec; Mr. Percy R. Bengough, (Dominion Adviser), British Columbia; Mr. J. K. King, Deputy Minister of Agriculture, New Brunswick; Dr. Fletcher Peacock, Director of Educational Services, New Brunswick; Mr. R. H. MacKay, Deputy Minister of Labour, Nova Scotia; Dr. F. H. Sexton, Principal, Nova Scotia Technical College, (Dominion Adviser); Mr. W. R. Shaw, Deputy Minister of Agriculture, Prince Edward Island; Mr. R. A. Rigg, Director, Employment Service of Canada; Mr. R. F. Thompson, Dominion Supervisor of Youth Training; Air Commodore W. R. Kenny, Royal Canadian Air Force.

In a statistical summary, the Dominion Supervisor of Youth Training, Mr. R. F. Thompson, indicated the practical results of the program to November 30, 1939. This showed that of 11,772 enrolled (during the period April 1, 1939 to November 30, 1939) in projects designed to train for wage-earning employment, 5,049 were placed in employment. In these projects were listed: forestry, mining and prospecting, home service training, urban occupational, farm apprenticeship, and aircraft mechanics. Other projects were: physical training, agriculture and rural courses, and student aid. In these three projects a total of 14,517 received training.

Dominion conference on national forestry program

The first Dominion wide conference on the National Forestry Program opened in Ottawa on January 22 with some 50 delegates present representing Federal and Provincial Departments of Labour, Forest Services and other organizations. In opening the Conference and welcoming the delegates the Honourable Norman McL. Rogers, Minister of National Defence, stated that the Program had been "a most successful experiment." As Minister of Labour, Hon. Mr. Rogers, last spring initiated the National Forestry Program for which Parliament at its 1939 session appropriated $1,000,000.

"We can look back on the result obtained with the greatest satisfaction," the minister told the Conference. "Its success, coupled with the co-operation experienced which achieved that success, arouses confidence that its future is assured no matter what its dimensions may be."

Mr. D. Roy Cameron, Dominion Forester, was elected as Chairman of the Conference, which dealt with a lengthy agenda covering all phases of the program during the two days set aside for their deliberations. Mr. Cameron pointed out that complete standardization of the N.F.P. was impossible owing to the great variation in conditions in different provinces. The purpose of the Conference was to reach an agreement on as many points as possible.

Although it was the opinion of the Conference that the majority of the work should continue to be applied in forest protection channels, it was generally agreed that a wide variety of projects—reforestation, sanitation and improvement cuttings, insect and parasite control, fish, game and wild life management, forest surveys and development of tourist and recreational facilities were legitimate objects of National Forestry Program activities.

One of the most important phases of the program under discussion at the Conference was that of Supervisory Personnel. It was considered that the success of the project was dependent in a large measure on the selection of capable camp foremen and supervising officers who were appreciative of the rehabilitation aspects of the scheme and the necessity of building up the physique and morale of the enrolees.

In terminating its deliberations, the Conference adopted resolutions urging that the program be continued as a means of re-establishing the morale, physical condition of its enrolees; developing, also, a sense of responsibility as citizens; as a means of rehabilitating, training and absorbing ex-servicemen at the conclusion of the war; and because of the benefits that accrue in the amount and quantity of the work accomplished in the field of conservation. It was also urged that the selection of the supervisory staff be a function of the various forest services responsible for the program; and that the program continue to promote the management and protection of our timber resources, to encourage wild life management and to increase the recreational use of our forests by tourists and others.

Supplement on Prices in Canada

A supplement on "Prices in Canada and Other Countries, 1939" is being issued with this number of the LABOUR GAZETTE. It deals with the movement in retail prices and the cost of living as well

as with wholesale prices in Canada during 1939 and previous years. Statistics are also given showing the movement of prices in certain other countries throughout the world.

A supplement "Wages and Hours of Labour in Canada" will be issued with the March number of the LABOUR GAZETTE. A table of index numbers for the period 1901 to 1939 was given in the issue for January on pages 75-76.

Control of prices in Great Britain

The British *Ministry of Labour Gazette* in its December issue, recently received, reviews the provisions of the Prices of Goods Act which was given Royal Assent on November 16.

The object of the Act is to prevent the price of goods to which it is applied by Order of the Board of Trade from being raised above the pre-war price by more than the increase in the cost of producing and selling them.

The Act makes it unlawful for any person to sell, agree to sell, or offer to sell any price-regulated goods in the course of any business at a price exceeding the permitted price, price-regulated goods being of a description defined in Orders to be issued by the Board of Trade. By the permitted price is meant the basic price together with the amount of any permitted increase. The basic price is the price at which, in the ordinary course of the business concerned, similar goods were being offered for sale at August 21, 1939, this date being subject to variation by the Board of Trade in certain specified circumstances. The permitted increase is defined as an amount not exceeding such increase as is reasonably justified, in view of the matters specified in the First Schedule to the Act. These matters include, the cost of material, rent, insurance premiums, wages and salaries, etc. Additions may be made to the Schedule by Order of the Board of Trade.

Provision is also made for the specification in Orders made by the Board of Trade of basic prices, permitted increases, or permitted prices for particular kinds of goods on the application of a representative body of traders in these goods or on the advice of a Central Price Regulation Committee. Thereafter the traders selling such goods at or below the specified prices cannot be prosecuted under the Act. The Board of Trade may also specify by Order a basic price for new descriptions of goods which were not in existence on August 21, 1939. In both cases there may be appeal against these Orders to a referee sitting with technical assessors.

Provision is made against evasion of the Act by refusal to sell stocks of price-regulated goods at the permitted price or by attaching to the sale of them conditions as to the purchase of other goods or as to payment for services. The Act does not apply to sales by auction unless specially ordered by the Board of Trade, or to sales of goods intended for export.

The administration of the Act is in the hands of a Central Price Regulation Committee and a number of local Price Regulation Committees to be appointed by the Board of Trade.

Co-operaton between Government departments and trade unions in Great Britain

In a recent issue of *Industrial and Labour Information,* official publication of the International Labour Office, detailed information is given concerning the organization and activities of various advisory bodies established in Great Britain in pursuance of the Government's policy of maintaining the closest co-operation and understanding between Government departments and the trade union movement.

Ministry of Supply.—Among the most important departments is that of the Ministry of Supply and the close co-operation maintained by this department with its advisory trade union committee is dealt with as follows:

As a result of a preliminary meeting of the National Trade Union Advisory Committee attached to the Ministry of Supply, methods of contact between representatives of the Advisory Committee and the various headquarters departments of the Ministry, including the different Controls, have been arranged. To avoid the multiplication of advisory committees and to economize time, members of the Committee or their representatives will have individual contact with responsible officers of the departments of the Ministry. Various difficulties standing in the way of industrial production, including lack of co-ordination in the transport services, localized shortages of skilled labour, unequal distribution of Government contracts, and details of the regional organization of the Ministry and the machinery it was proposed to develop for contact with the trade unions, were discussed at the meeting of the Advisory Committee, which was placed in possession of information concerning the trade panels committees and control organizations already working in connection with the Ministry of Supply.

Conferences have taken place between representatives of the Trades Union Congress General Council and of unions in the engineering and shipbuilding trades. At these conferences a scheme for setting up district committees in connection with the Ministry of Supply has been considered and adopted by the unions concerned. These district committees are to be composed of equal numbers of employers' and trade union representatives and will be constituted as advisory bodies to the Ministry's Area Boards (composed of officials from the Air Ministry and the Admiralty, as well as the Ministry of Supply, with additional officers appointed to deal with various industries). The functions of the district committees are to advise on questions

arising in the engineering industry. The unions concerned have accepted the scheme and approved the terms of reference for the district committees, the functions of which are defined as follows: (1) to advise the Area Boards established by the Ministry of Supply regarding the efficient output of anything required by the Ministry of Supply and other supply departments and to assist them in overcoming local difficulties; (2) to survey the area within which the Committee is working, with a view to its increasing efficient production therein; and (3) to take into consideration and to make recommendations upon any matters arising, except those which are properly the concern of the Ministry of Labour or are normally handled by the joint organizations of employers and trade unions in connection with wages or conditions of employment.

Other Government departments having direct contacts with responsible organizations of employers and employees are: the Ministry of Shipping, the Ministry of Agriculture and Fisheries, the Ministry of Food, and the Board of Trade. Under this last named department it is the duty of a Central Price Regulation Committee to secure uniformity in the activities of local regulating committees and to exercise a general supervision over the enforcement of the Prices of Goods Act (reviewed in the preceding note).

Skilled workers released from armed forces in Great Britain

A number of skilled men are serving in the armed forces, some of whom were called up in the early days of the war, and many applications have since been received by the British Ministry of Labour and National Service from employers who wish to secure the return of these men to their industrial employment.

Men belonging to certain important industrial occupations who are of or above the age specified in the schedule of reserved occupations are therefore being allowed to return to their civil employment, provided that they do not hold rank above that of private, that they are not employed in the armed forces in a service trade corresponding to their civil occupation, and that they are not serving in an anti-aircraft or coastal defence unit (though it may shortly be possible to arrange for the release of men in these units also).

Occupational registration of men called up for armed service in Great Britain

An important change has been made in the procedure for the registration of men for service in the armed forces in Great Britain in the new age group which has recently been called up.

In addition to their national registration identity cards and unemployment insurance books, the men must now give an exact description of their occupations. This is essential not only for the purpose of applying accurately the schedule of reserved occupations but also to identify those men who are not in an occupation which is reserved by the schedule but who could be employed in the armed forces in their trade capacity. It is emphasized that many men are wanted in the services as tradesmen in jobs comparable to their civilian occupations.

To avoid errors, the Ministry of Labour and National Service will write to the employer of every man registered asking for a confirmatory statement of the employee's job. If an employee who is not in a reserved occupation when he registers subsequently changes to a reserved occupation this change should be notified immediately.

Expulsion of Russia from League of Nations

In view of the expulsion of Soviet Russia from the League of Nations last December following the invasion of Finland, the Governing Body of the International Labour Office, meeting in Geneva on February 5, agreed that Russia's membership in the I.L.O. was also at an end.

At the same meeting, Belgium and the Netherlands were accorded representation on the Governing Body to replace the Russian and Italian vacancies.

Effect of war on world unemployment situation

The International Labour Office released at the end of 1939 the results of a survey on the effect of four months of war on one of the world's greatest peace-time economic and social problems—that of unemployment. The observations of the I.L.O. on this subject are given in the following paragraphs:—

It might be thought that war conditions and large-scale mobilisation had abolished unemployment for the many countries more or less directly affected. But information collected by the International Labour Office shows that the war has had a much more complicated effect on national employment markets.

In most belligerent countries and in many neutral countries, unemployment rose in the first month of the war and still remains at a relatively high level. In Great Britain nearly 200,000 more people were unemployed in mid-October than in mid-August, but by mid-November there was a slight drop of 28,000 as compared with mid-October; in France, unemployment increased by about 14,000, and in Belgium by over 45,000, in the first month of the war, although, in the latter country, this was followed by a decrease of 29,000 during October; the percentage of trade

unionists unemployed in Denmark rose from 9·5 per cent to 16 per cent by the end of October and to 21·5 per cent by the end of November; in the Netherlands there was a moderate increase and in Norway a rather substantial rise from 18 per cent in August to 30 per cent in November. Trade restrictions have thrown many thousands of workers out of employment in Greece. In Germany the number of wholly unemployed persons has remained low, but there appears to have been an increase in short time. In Switzerland the unemployment situation has remained practically unchanged. Among American countries there has been an increase in Chile but a decrease in Canada and the U.S.A.

For those who remember the last war these increases in unemployment are not as surprising as they at first appear. Today, in fact, the rate of increase in unemployment has been considerably less rapid than in 1914. Then, the first weeks of war raised Germany's level of unemployment to such an extent that one-fourth of all the non-mobilised industrial workers were unemployed. And in Great Britain, although no comparable total statistics are available, the Minister of Labour recently declared that "in the second month of the last war the trade union rate of unemployment was more than double what it was before the outbreak".

Industrial dislocation. — Where have the extra unemployed come from? It is clear that there have been new demands for labour in certain trades, but at the same time considerable unemployment has accompanied the transition from a peace or a semi-war economy to an economy directly geared to war needs. Many small enterprises have closed down and many small trades have been disorganised by mobilisation and civilian evacuation. In France, for example, nearly half of the country's unemployed are concentrated in Paris, a city particularly affected by dislocations of small-scale industry and trade. A second important cause of increased unemployment is, as in 1914, the arrival of large numbers of women workers in the labour market, many of them forced into job-hunting by the mobilisation and many more dismissed from employment in the personal service industries. Also, considerable numbers of salaried employees and of workers in such trades as the building trades have lost their jobs and have not yet been absorbed into the changed economy. Seasonal factors, of course, account for some unemployment. Finally, in many countries trade restrictions have affected employment in export industries or industries which depend on imports for their raw materials.

In the United States and in Canada, on the other hand, there was a spirit of optimism in the first weeks of war. Large numbers of unemployed workers were absorbed in industries producing for war needs. Nevertheless, national officials in these countries continue to warn against over-optimism as to the future, and to point out the large pockets of unemployment which are—and will probably remain for some time—basically unaffected by current war developments.

Shortage of skilled labour.—A particularly striking feature of the present situation has been the fact that, parallelling a fairly general increase in total unemployment, shortages of many kinds of skilled labour have been greatly accentuated. Belgium lacks coal-miners, the Netherlands need skilled workers in several trades, Great Britain and France are concerned with maintaining a sufficient supply of skilled engineers, mechanics, ship-builders, etc., and Germany is taking steps to assure a reserve of properly trained workers for her industrial needs. Even in the United States, with its vast reservoir of unemployed workers, skilled labour shortages are already acute in several trades and in various parts of the country.

In an address delivered by the United States Secretary of Labor opening the Sixth National Conference on Labor Legislation, Miss Frances Perkins, in referring to the problem of age discrimination in employment of older workers stated:

"Two years ago the conference asked me to appoint an advisory committee to study the question of age discrimination, and to draft a practical program. The committee was appointed, under the chairmanship of President Chase of New York University, and was composed of labour representatives, businessmen, and public officials. In its unanimous report, the committee said:

" 'Unthinking acceptance of the idea that workers of 40 or over are less desirable than younger workers, has created a serious situation. An examination of factual data on productivity, accident, sickness, group insurance, and pension plans, has led us to the conclusion that there is little significant relationship between age and costs, and that the prejudice against hiring older workers rests largely on inadequate and erroneous impressions. We urge that everything possible be done to dispel the idea that workers are through after 40.' "

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

FIVE applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour recently as follows:—

(1) From foremen, clerks, drivers, chauffeurs, checkers, etc., in the employ of the Railway Express Agency, Inc., at various points in Canada. The dispute directly affects 60 employees, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, who request an increase in their wage rate of 5 cents per hour to conform with a similar increase granted on August 1, 1937, by the same company to its employees in the United States.

(2) From employees of certain coal dealers in the City of Toronto, members of the Retail Coal Dealers' Association. Approximately 600 drivers, helpers, yardmen and truckers, members of Local 83, Coal Drivers, Helpers and Truckers' Union, were stated to be directly affected. The applicants stated that certain conditions existed in the coal trade in Toronto, such as group buying, guaranteed prices, coupons, premiums and late deliveries, which they alleged to be detrimental to the employees' interests and might lead to a strike. Inquiry disclosed, however, that the matters in dispute related wholly to trade practices and were not such as would come within the provisions of the Industrial Disputes Investigation Act. A board, therefore, could not be established.

(3) From the Dominion Coal Company Ltd., and its employees being members of District 26, United Mine Workers of America. The dispute concerns wages and working conditions. A Board of Conciliation and Investigation was established by the Minister of Labour on January 22 and members thereof were appointed as follows: Honourable Mr. Justice C. P. McTague of the Supreme Court of Ontario, Toronto, chairman, appointed by the Minister in the absence of a joint recommendation from the other board members, Professor Frank R. Scott, of McGill University, Montreal, and Mr. Ralph P. Bell, Halifax, nominated by the employees and the company, respectively.

(4) From motormen-conductors, bus operators, shopmen, barnmen and trackmen in the employ of the London Street Railway and being members of Division 741, Amalgamated Association of Street and Electric Railway and Motor Coach Employees of America. The dispute directly concerns 172 employees and arises out of the refusal of the company to complete the restoration of wage rates recommended by a Board of Conciliation and Investigation in April, 1937.

(5) From 75 marine engineers employed on the Canadian Great Lakes and the St. Lawrence River and Canals by the Paterson Steamship Lines, Ltd., of Fort William, Ontario, and represented by District Council No. 3, National Association of Marine Engineers of Canada, Inc. Failure of the company to discuss conditions of employment with the employees' representatives or to consider their request for adoption of a higher wage scale is stated to be the cause of the dispute.

The personnel of the board established on December 8 to deal with two applications received from certain sleeping car conductors and porters in the employ of the Canadian National Railways and being members of the Canadian Brotherhood of Railway Employees (LABOUR GAZETTE, December, 1939, page 1207), was completed on January 26 by the appointment of the Honourable Mr. Justice Louis Cousineau, of the Superior Court, Montreal, P.Q., as third member and chairman. This appointment was made by the Minister of Labour on the joint recommendation of the other board members, Messrs. Edward H. Crawford, of Winnipeg, Man., and F. C. Dobell, K.C., of Montreal, nominees of the employees and company, respectively.

There appeared in the issue of the LABOUR GAZETTE for October, 1939, page 978, the text of the findings of the Board of Conciliation and Investigation which dealt with a dispute between SMT (Eastern) Limited and its motor coach and freight truck drivers, members of Division 1182, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America. The report of the board, which was signed by the chairman, Rev. Herbert E. Thomas, D. D., and the board member nominated by the employees, Mr. James A. Whitebone, contained recommendations as to settlement of the dispute, including certain wage increases and union recognition. Mr. Louis McC. Ritchie, the board member nominated by the company, submitted a

94921—2½

minority report. A strike threatened when the company declined to recognize the union. Conferences between the parties followed and a settlement was reached, the board's recommendations, including union recognition, being accepted.

Negotiations between the Canadian National Railways and representatives of its cartage service employees at St. Hyacinthe, Montreal, Brantford, London and Guelph, respecting wages and working conditions, to which reference was made at page 8 in the January issue of the LABOUR GAZETTE, resulted in an adjustment of the points at issue, and the application for a board was withdrawn on February 5. Three hundred and ten employees, members of the Canadian Brotherhood of Railway Employees, were directly affected by the dispute.

Interim Report

The board established to deal with the demand of the employees of the Algoma Steel Corporation, Ltd., for a horizontal increase in wages of 8½ cents an hour, reported to the Minister of Labour on January 15 that it had held five meetings, and, after hearing the representations of the parties concerned and evidence by six witnesses on behalf of the employees, had adjourned for a period of three months. The board members are His Honour Judge A. H. Dowler, chairman, Mr. Lynn B. Spencer, K.C., nominated by the company, and Mr. W. F. O'Connor, K.C., nominated by the men.

Report of Board in Dispute between Various Grain Elevator Companies at Port Arthur and Fort William and their Employees

The Board of Conciliation and Investigation established in October to deal with a dispute between various grain elevator companies at the Head of the Great Lakes and their employees being members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, reported to the Minister of Labour on January 12. The employees, approximately 370 in number, had requested increased wages and certain improvements in working conditions.

The report of the board is signed by the chairman, Honourable W. F. A. Turgeon, Chief Justice of the Saskatchewan Court of Appeal, and the board member nominated by the companies, Mr. M. A. MacPherson, K.C. A minority report was submitted by the employees' nominee, Mr. Alexander Gibson. The text of these reports is given below:—

Report of Board

In the matter of The Industrial Disputes Investigation Act and a dispute between Saskatchewan Pool Terminals, Limited, Bawlf Terminal Elevator Company, Limited, et al, Employers, and certain of their employees being members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, Employees.

To the Honourable NORMAN MCLARTY,
Minister of Labour,
Ottawa.

SIR,—Your Conciliation Board in the above matter consisting of the Honourable W. F. A. Turgeon, Chief Justice of Saskatchewan, Mr. M. A. MacPherson, K.C., of Regina, and Mr. Alexander Gibson, of Port Arthur, have the honour to report:

1. Sessions of the Board were held at Winnipeg on October 23, 1939; at Port Arthur on November 29 and 30, and from December 1 to 8, inclusive; and again at Winnipeg from January 5 to January 10, inclusive.

2. Mr. C. E. King, of Port Arthur, was appointed Secretary of the Board by action of the Department under Section 15 of the Act.

3. The companies concerned in the investigation were represented before the Board by the following gentlemen:

W. C. Hamilton, representing Federal Grain Company, Limited; P. F. Bredt, representing Manitoba Pool Terminals, Limited; J. D. Read, J. B. Jenkins, and F. J. MacLaren, representing Saskatchewan Pool Terminals, Limited; Peter Watt of the United Grain Growers Limited; Mr. Reilly of the Canadian Consolidated Elevator Company; and Mr. Ross, Eastern Terminal Elevator Company.

4. The employees of the companies who requested the investigation were represented by the following gentlemen: F. H. Hall, Vice-President, Brotherhood of Railway and Steamship Clerks; J. J. Ratcliffe, General Representative, Brotherhood of Railway and Steamship Clerks; and J. L. Pateman, General Chairman, System Board of Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

5. The demand put forward by the employees at whose request the Board was appointed took the form of a proposed contract to be executed, as parties, by each of the companies, on the one part, and by Local 650, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, on the other part. This proposed

agreement was intended to take the place of a former agreement between the same parties which came into effect on September 1, 1938.

6. The controversy between the parties had to do mainly with the following points:

(1) The degree of recognition to be given to the Brotherhood; (2) Hours of labour; (3) Rates of pay; and (4) The status of monthly employees in respect to the Brotherhood and to hourly employees.

7. The Board regrets to say that it has not been able to reach unanimity on all the questions involved. As the discussion had to do with the terms of a new contract between the parties, it has been thought convenient to annex hereto the draft which the majority of the Board, the undersigned, Hon. W. F. A. Turgeon and M. A. MacPherson, recommend as being, in their opinion, a proper agreement in the circumstances. Mr. Alexander Gibson, who differs with the other members of the Board on certain points, submits his recommendations upon these points under his separate signature.

8. As to the status of the organization as a bargaining agency, all three members of the Board agree to the formula set out in Section 1 of the draft contract, except that Mr. Gibson does not agree to the exclusion of monthly employees from certain enumerated sections of the draft as set out in this Section 1.

9. On the question of rates of pay and the length of the working day, the undersigned, the Hon. W. F. A. Turgeon and Mr. M. A. MacPherson, are of the opinion that no sufficient cause has been shown for making any change at the present time in the figures arrived at in 1938 and embodied in the agreement made between the companies and the organization and brought into effect on September 1 of that year.

10. The pay of the companies to their employees is substantially higher than wages paid to similar labour in other lines of employment at the head of the lakes, except in the case of the paper companies, whose wage levels appear to be higher than those of the elevator companies. The elevator industry manufactures nothing for sale and is confined for its revenues to storage fees it receives for the space in its houses. The occupancy of this space depends upon circumstances which it cannot control, and the present crop year has brought disappointment to the industry in this regard. Moreover, its rate of remuneration is fixed by a tariff set by a Government Board, and its earnings in late years under the present tariff have left nearly all the companies in bad financial condition. The financial statements filed show losses in operation, inability to provide suitable depreciation, and the failure to pay any dividends over a long period of years. At the same time no suggestion is made of any lack of efficiency in management.

11. These considerations have to do with the question of the hours of labour as well as with that of the rates of pay. The ten hour day, which was agreed to in 1938, is a feature of the peculiar character of the industry which has a rush season of usually about four months in the autumn and another of about one month to six weeks in the spring. The rest of the year is slack time. To shorten the day to eight hours and to provide for the payment of overtime after these eight hours would appear to impose a financial burden upon the companies which they are unable to stand at present. From the point of view of providing a working day in which, probably by the use of three shifts when necessary, no man would work more than eight hours in any day even in the rush period, the undersigned think that, while this may be a desirable object to look forward to, it is not one that can be accomplished to-day having regard to the present condition of the industry.

12. As to the position of the monthly men within the industry, the undersigned think that this is being dealt with fairly under present circumstances, regard being had particularly to the provisions of the draft regarding seniority, which apply to them as well as to the hourly employees, and also to the provision to be found in Section 1 excluding them from the operation of certain other sections.

All of which is respectfully submitted.

(Sgd.) W. F. A. TURGEON,
Chairman.

(Sgd.) M. A. MacPHERSON.

AGREEMENT COVERING ELEVATOR EMPLOYEES AT PORT ARTHUR AND/OR FORT WILLIAM (INDIVIDUAL AGREEMENTS SIGNED BY THE FOLLOWING COMPANIES) AND LOCAL 650, BROTHERHOOD OF RAILWAY AND STEAMSHIP CLERKS, FREIGHT HANDLERS, EXPRESS AND STATION EMPLOYEES, HEREINAFTER CALLED THE "ORGANIZATION."

1. The Company recognizes the organization as a bargaining agency for all the elevator employees below the rank of general foremen, and agrees not to recognize during the currency of this agreement, any other trades union organization as a bargaining agency in respect to wages, hours of labour, working conditions or any other matter herein dealt with; and also agrees, for the said period, not to take any action in respect to any of its employees which shall have the effect, either directly or indirectly, of altering any of the terms of this agreement without the consent of the organization. Provided however, that Sections 3, 4, 5, 6, 7, 8, 9 and 19 shall not apply to monthly

employees, and that no employee shall be deemed to be precluded by this agreement from dealing directly with the company respecting his own position in matters not particularly provided for herein, or in other cases where he believes that any provision of this agreement is not being applied fairly to him.

2. Although the principle of "open shop" is maintained, the company will show no discrimination, and employ no discriminating methods against membership in the organization.

3. A ten-hour day shall prevail. During the open season of navigation, a minimum of forty-eight (48) hours shall constitute a week's work, and during the closed season of navigation, a minimum of forty (40) hours shall constitute a week's work. The company will use every endeavour, as long as work is available, to provide every man employed each week with a week's work as defined herein.

4. The general working hours shall be as follows: 7 a.m. to 12 noon, 1 p.m. to 6 p.m. in the open season of navigation and 8 a.m. to 12 noon, 1 p.m. to 5 p.m. in the closed season of navigation. If the meal period is not allowed at the usual time and is worked, twenty minutes with pay in which to eat, shall be allowed.

When a regular night shift is employed, the general working hours shall be as follows: 7 p.m. to 12 midnight, 1 a.m. to 6 a.m.

5. A minimum of 15 cents an hour extra shall be paid for all overtime over ten (10) hours.

6. Time and a half shall be paid for all work performed on Sundays and the following holidays:

New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Remembrance Day and Christmas Day.

7. Subject, always, to the provisions of section three hereof, every employee started to work on any day shall be paid for at least a half day at the prevailing rate.

8. Any employee ordered back to work after 6 p.m. shall be paid for at least two hours and a half at the prevailing rate.

9. Any employee assigned to a higher rated position for a period of three (3) days or over shall be paid at the rate of wages prevailing for said higher rated position.

10. Vacancies and the filling of new positions shall be governed by seniority, subject to the requirements of competence and fitness.

11. A seniority list of all employees showing name, date of entry into the service, position occupied, shall be posted in a place accessible to those affected. The list shall be revised and posted in date order on the first day of September of each year, and shall be open for correction on proof of error by an employee or the Local Shop Committee. The chairman of the Committee shall be furnished with a copy of the seniority list. No names shall be placed on the seniority list until the men have worked for *four (4) months.*

12. In reducing forces seniority shall govern subject as in the case of section ten to the requirements of competence and fitness. Employees whose positions are abolished, or who have been displaced, may exercise their seniority over junior employees. When forces are increased, employees will be returned to the service and positions formerly occupied in the order of their seniority.

13. To assist both parties to carry out their obligations and responsibilities under this agreement, there shall be formed amongst the staff of each elevator a Local Shop Committee. The Committee shall consist of three employees of the elevator concerned. The Committee shall be recognized by the company and all matters arising from the application of this agreement, or any matters wherein the employees feel aggrieved, shall be taken up by the Shop Committee with the company's designated officers.

14. An employee disciplined, dismissed, or who considers himself unjustly treated, shall have a fair and impartial hearing, providing written request is made to his superior within FIVE DAYS thereafter, and the hearing shall be granted within five days of request for same. At such hearing he may be represented by the Shop Committee. The decision shall be rendered within five days thereafter. If an appeal is taken from the decision to a higher officer of the company, the employee may be represented by the Shop Committee and a representative of the organization. If the final decision of the company's officer fails to sustain the charges against the employee, he shall be paid for all time lost and shall be restored to his former position.

15. Prior to settlement of any dispute between the organization and the company there shall be neither a suspension of work by the employees nor a lock-out by the company. In the event that the Shop Committee and a representative of the organization is unable to secure adjustment of any matter concerning which trouble may develop, said matter shall be referred to the organization's Vice-President or to any person specially designated by him for the purpose of negotiation with the company.

16. The members of the Local Shop Committee shall be allowed necessary leave of absence for the discussion of grievances with the officers of the company.

17. Monthly employees with more than a year's service and permanent hourly employees who have worked not less than forty-six (46) weeks in fifty-two (52) consecutive weeks, shall be allowed two weeks' vacation with pay in each yearly period.

18. Adequate lunch room accommodation and proper sanitary conveniences will be provided in each elevator as soon as possible.

19. For all hourly men, and subject to the provisions of Section nine, rates of pay shall be established as follows:

For shovellers, and ordinary labourers, a minimum of 50 cents per hour.

For all other classes of experienced labour, which shall include assistant weighmen, assistant electricians, assistant millwrights, cleanermen, bin floormen and oilers, etc., 55 cents per hour.

In case any higher wages are as of the first day of September, 1939, being paid to any of the employees as classified above, there shall in absence of agreement, and during the period of this agreement, be no reduction in the said higher wages so paid.

20. Employees not covered by this agreement shall not perform any work which might properly be performed by employees coming within it.

21. This agreement shall as to rates of pay and working conditions be effective as of August 1, 1939, and shall continue in effect until December 31, 1940, and thereafter shall remain in effect for the following calendar year periods, subject to sixty (60) days' written notice prior to expiration by either party requesting revision or cancellation.

Minority Report

In the matter of the Industrial Disputes Investigation Act and a dispute between Saskatchewan Pool Terminals, Limited, Bawlf Terminal Elevator Company, Limited, et al, Employers, and Certain of their Employees being members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, Employees.

To the Honourable NORMAN MCLARTY,
Minister of Labour,
Ottawa.

SIR,—As a member of the above Board of Conciliation, consisting of the Honourable W. F. A. Turgeon, Chief Justice, Saskatchewan, Mr. M. A. MacPherson, K.C., of Regina, and the undersigned, I beg to submit the following minority report:

1. Clause 1 of the draft agreement, which deals with the recognition of the organization as a bargaining agency, but qualifies same by the insertion of clauses which determine certain conditions respecting hours of labour and overtime rates for monthly employees. It is my contention that unless agreement is reached whereby the organization has full jurisdictional control over monthly as well as hourly employees, no agreement could be satisfactory to both parties.

The principle of collective bargaining has been accepted by most large industrial concerns at the head of the lakes, at which place these elevators are situated, and this principle has become recognized by the men employed in these industries as a right. Working agreements covering employees on the railway, at the paper mills, and with both the corporations of the city of Port Arthur and of Fort William, were submitted to the board, in which collective bargaining was granted to monthly as well as hourly employees. On that basis I submit that an agreement should be consummated covering both monthly and hourly men.

2. Hours of labour. The request of the men for the 8-hour day seems to me a reasonable request. The 8-hour day is recognized in all industries, with few exceptions, and certainly by industrial concerns at the head of the lakes which do business with the Unions. Some twenty-two trades union organizations in the city of Port Arthur and some twenty-five in the city of Fort William have the 8-hour day recognized and incorporated in agreements with companies.

The majority members of the board, Hon. W. F. A. Turgeon and Mr. M. A. MacPherson, K.C., contend that the pay of the companies to their employees is substantially higher than the wages paid to similar types of employees at the head of the lakes. I submit that elevator work has little comparison with other work at the head of the lakes, with the exception of common labour. The work in all other industries at the lake head is different from grain elevator work, and the conditions of work in a grain elevator cannot be compared with work in a freight shed, paper mill, on a railroad, etc., inasmuch as the conditions differ greatly. The dust hazard and its effect upon the health of the employee is one very good reason why the hours of labour should be shortened; the strain of shovelling wheat from box cars is continual, and the work demands skill as well as endurance, and should not be classified with work of other types. In the interest of the health of the employee, a shorter working day should be recognized.

The majority members of the board, among other things, claim that the rate of remuneration fixed by the tariffs set by a government board, has curtailed the earnings of the elevators during late years, and this in addition to bad crops has left nearly all the companies in a poor financial condition. While I admit that this situation exists, I submit that the first charge against industry is wages, hours of labour and working conditions, and that the financial position of the companies in this instance is not sufficiently poor to make it necessary for them to deny their employees an 8-hour day.

3. Again, Sir, I would draw your attention to the fact that time-and-a-half for overtime rates is universally recognized, and that while the grain elevators may have their busy as well as slack seasons, they are not the only industries subject to such conditions. Both the Canadian Pacific Railway and the Canadian National Railways have the same conditions. During the fall rush of wheat, extra train crews are taken on, and during the slack season they are laid off. Notwithstanding this condition, no effort is made by the railways to offset an eight-hour day in their yards, or interfere with the overtime rates. In the paper mills at the lake head, and in other industries, time-and-a-half is paid for all work over eight hours per day as well as Sundays and holidays.

May I respectfully draw your attention also to this fact, that the underlying principle of time-and-a-half for overtime is meant to penalize the company, and is not advanced by the unions as a means for receiving punitive rates for such work.

4. In the matter of wages, I am of the opinion that the conditions under which these men work justify their demand for higher

rates than they received under the old agreement.

With all other recommendations of the majority of the board I am in substantial agreement, but unless these three cardinal points: the right to bargain exclusively; the 8-hour day; and the time-and-a-half for all overtime are recognized, no agreement satisfactory to the men can be entered into.

Respectfully submitted,

(Sgd.) ALEXANDER GIBSON.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1940

THE following table shows the number of disputes, workers involved and time loss for January, 1940, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Numbers of employees involved	Time loss in man working days
*Jan. 1940	6	919	6,861
*Dec. 1939	11	1,570	20,679
*Jan. 1939	10	1,228	8,047

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded for January, as well as the number of workers involved and the time loss, was much smaller than in the previous month when strikes of gold miners in British Columbia, coal miners in Saskatchewan, fish handlers in Nova Scotia, knitting factory workers at Brantford, Ont., and felt factory workers at Guelph, Ont., involved about twelve hundred workers and caused considerable time loss. The only strikes in January involving many workers and much time loss were those of gold miners in British Columbia and electric wire workers at Brockville, Ont. In January, 1939, a strike of coal miners at Blairmore, Alberta, caused seventy-five per cent of the time loss.

Two disputes, involving 184 workers, were carried over from December, that affecting some forty women's clothing factory workers at Montreal not having been reported to the Department in time for inclusion in the January issue of the LABOUR GAZETTE. Four disputes commenced during January. Of these six disputes, four were terminated during the month, one resulting in favour of the employer and one in favour of the workers involved, while a compromise settlement was reached in one case and the result of one dispute was recorded as indefinite. At the end of the month, therefore, there were two strikes or lockouts recorded as in progress, namely: gold miners, Pioneer Mines, B.C., and electric wire workers, Brockville, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. Information is available as to three such disputes, namely: stationary engineers, Toronto, Ont., March 2, 1939-March 11, 1939, one employer; fur factory workers, Toronto, Ont., October 17, 1939-October 31, 1939, one employer; and work clothing factory workers, Winnipeg, Man., December 1, 1939-December 15, 1939, one employer.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required are not included in the record, no relation of employer and employees being involved.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress Prior to January

GOLD MINERS, PIONEER MINES, B.C.—Early in January following the failure to settle the dispute by negotiations the company announced that the mine would be re-opened on a reduced scale of operations if sufficient men would resume work. This was not accepted and a union committee discussed the dispute with the provincial Minister of Labour who discussed the proposal of the union with the management of the mine, but a settlement was not reached. On January 22 the appeal of six men convicted of violation of the British Columbia Industrial Conciliation and Arbitration Act was withdrawn in the Court of Appeals. The conviction by a

magistrate had been confirmed by a county judge but the fines of $125 to $200 were reduced by two-thirds. On January 26 it was reported that eviction orders against a number of workers in company houses were being carried out. Toward the end of the month union representatives communicated with the Federal Department of Labour with a view to the reference of the dispute to a Board of Conciliation under the Industrial Disputes Investigation Act. Since the enactment of the provincial statute above referred to in 1937, in British Columbia the federal statute has applied directly only to disputes under dominion jurisdiction, such as interprovincial railways, water transportation, communication, etc., and a board can be appointed only on an application concurred in by both parties to the dispute. This proposal was accordingly discussed with the management of the mine by the western representative of the Department but early in February the necessary consent had not been given.

Women's Clothing Factory Workers (Dresses), Montreal, P.Q.—As a result of the failure of negotiations as to increases in piece rates for certain work, machine operators ceased work on December 19, being joined by other employees on December 21. The establishment was operated under an agreement with the International Ladies' Garment Workers' Union and on January 13 it was arranged that work would be resumed on January 15, the piece rates in dispute to be negotiated as under the agreement which provides for arbitration if unsuccessful. Four of the employees were not reinstated and secured work elsewhere.

Disputes Commencing During January

Coal Miners, Port Hood, N.S.—Employees in a colliery being re-opened ceased work to secure an increase in wage rates. It appears that wage rates had been tentatively agreed upon as a result of a strike from November 23 to December 7, 1939. As a result of con-

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1940*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to January, 1940				
Mining, Etc.—				
Gold miners, Pioneer Mines, B.C.	1	142	3,690	Commenced Oct. 8, 1939; for recognition of union, check-off of union dues and increased wages; unterminated.
Manufacturing—				
Textiles, Clothing, Etc.—				
Women's clothing factory workers (dresses), Montreal, P.Q.	1	42	462	Commenced Dec. 19, 1939; for adjustment in piece rate wages; terminated Jan. 13, 1940; negotiations; indefinite.
(b) Strikes and Lockouts commencing during January, 1940				
Mining, Etc.—				
Coal miners, Port Hood, N.S.	1	15	255	Commenced Jan. 12; for increased wage rates; terminated Jan. 31; conciliation (provincial); compromise.
Coal miners, Westville, N.S.	1	350	700	Commenced Jan. 18; against working with non-union employees; terminated Jan. 19; return of workers when other employees joined union; in favour of workers.
Manufacturing—				
Rubber Products—				
Rubber factory workers, Kitchener, Ont.	1	32	64	Commenced Jan. 3; against change in working conditions alleged to involve speed-up; terminated Jan. 4; return of workers and replacement; in favour of employer.
Metal Products—				
Electric wire workers, Brockville, Ont.	1	338	1,690	Commenced Jan. 26; for amendment to union agreement with increases in wages, etc.; unterminated.

*In this table the date of commencement in that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

ciliation by the Nova Scotia Department of Mines an agreement for preliminary operations was reached with the United Mine Workers of America providing for day rates from $3 to $3.50, also contract mining rates and certain working conditions. Work was resumed on February 1.

COAL MINERS, WESTVILLE, N.S.—Three hundred and fifty coal miners ceased work on January 18, refusing to work with some 150 other employees not members of the union, the Co-operative Labour Protective Association, No. 1 (Miners), affiliated with the All Canadian Congress of Labour. After a cessation of two days the other miners joined the union and work was resumed on January 20.

RUBBER FACTORY WORKERS, KITCHENER, ONT.—Employees in two sections of one establishment ceased work on January 3 in protest against a change in production methods alleged to involve speed up of operations. The management reported that the number of operations had been reduced and proposed to reduce the number of workers or to increase the speed of the machines. The employees rejected both changes and the management then decided to increase the speed. After the stoppage several of the workers were replaced and the strikers applied for reinstatement and those whose positions had not been filled were reinstated. It was reported that over one hundred employees were indirectly affected and several hundred partially affected.

ELECTRIC WIRE WORKERS, BROCKVILLE, ONT.—A number of employees in one establishment ceased work on January 26, negotiations for amendments to the agreement as to increases in wages of ten cents per hour, overtime rates, seniority, etc., having failed. The agreement with the United Electrical, Radio and Machine Workers of America affiliated with the Congress of Industrial Organizations provided for reference of any disputes as to amendments, etc., to an arbitrator appointed by the Ontario Minister of Labour if not agreed upon by the parties. It appears that differences of opinion arose as to the application of the terms of the agreement to the points in dispute. When the strike occurred the management applied to the Ontario Department of Labour and as a result of conciliation a settlement was reached and work was resumed on February 5. Wages were increased by five cents per hour for male and three cents for female employees, with certain changes as to seniority, vacation, etc.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month bringing down to date that given in the March, 1939, issue in the review of Strikes and Lockouts in Canada and Other Countries, 1938. The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned. Information as to particular disputes is taken for the most part from newspapers.

Great Britain and Northern Ireland

In Great Britain the *Ministry of Labour Gazette* publishes statistics dealing with all strikes and gives some details of the more important ones.

The number of disputes which began during November was 79 and 10 were unterminated at the end of October, making a total of 89 in progress during the month; the number of workers involved was 42,900 and the resulting time loss was 132,000 man-working days.

Of the 79 strikes which began during November, 23 arose out of demands for increases in wages, three were against proposed wage reductions and 15 were over other wage questions. Questions of working hours led to three strikes; 15 were over questions respecting the employment of particular classes or persons; 13 arose over questions of working conditions; questions of trade union principle led to four disputes. Three disputes were due to sympathetic action.

Final settlements reached during November numbered 64. Of these, 16 were settled in favour of the workers, 34 were settled in favour of the employers, and 14 resulted in compromises. In the case of 12 other disputes work was resumed pending negotiations.

The strike which involved the largest number of workers during November began on October 30 at several tinplate factories in Monmouthshire and South Wales, when one

class of labourers demanded increased wage rates. There were 7,000 workers involved but work was resumed unconditionally on November 4.

Near Doncaster, Yorkshire, a one day strike which occurred on November 14, and involved 3,500 workers in one colliery resulted in a change in the method of payment of wages.

Near Barnsley, Yorkshire, a strike of 48 haulers in one colliery over dissatisfaction with travelling time allowance indirectly affected 2,071 other workers. The strike began on November 15 and work was resumed on November 17 under conditions existing prior to the stoppage.

Another strike at one colliery near Barnsley involving 1,633 workers occurred on November 22. The strikers demanded the reinstatement of a labourer who had been dismissed. Work was resumed the next day and the collier in question was subsequently restarted in another part of the pit.

On November 10, a claim on the part of drawers for increases in tonnage rates led to a strike of 480 employees of one colliery at Shotts, Lancashire. Three days later 1,770 employees of other collieries in the same district went out in sympathy. Work in all these collieries was resumed November 15, but the terms of the settlement are not noted.

A demand that a dismissed employee be reinstated led to a strike of 1,500 employees of a clothing factory at Treorchy, Glamorganshire, on November 10. The employee was reinstated and work was resumed the same day.

On November 2, at a steel plant near Glasgow, 265 labourers, locomotive drivers and plate layers went on strike demanding an increase of 3d. per hour. About 1,000 other employees were indirectly involved. Work was resumed unconditionally on November 10.

A claim on the part of strippers at a colliery near Kirkcaldy, Fifeshire, for increased tonnage rates led to a strike of 973 colliers on November 16. About 200 other workers were indirectly affected. Work was resumed on December 5 at the same rates which had been in force prior to the stoppage.

Australia

The latest quarterly summary of Australian statistics published by the Commonwealth Statistician, which has recently been received, contains statistics on industrial disputes during 1938 and for the first two quarters of 1939.

In 1938 there were 376 disputes which involved 132,480 workers directly and 11,474 indirectly, with a resultant time loss of 1,337,994 man working days. The number of establishments involved was 558 and the estimated loss in wages was £1,303,820.

During the first three months of 1939 there were 92 strikes directly involving 27,211 workers and resulting in a time loss of 78,894 man working days. In the second quarter there were 109 strikes, directly involving 26,962 workers with a resultant time loss of 141,085 man working days.

New Zealand

The Dominion of New Zealand has recently published statistics dealing with industrial disputes during the first nine months of 1939. During the period there were 55 strikes which involved 13,977 employees of 624 firms and which resulted in a time loss of 44,851 man working days. The estimated loss in wages was £50,526. During the corresponding nine months of 1938 there were 56 strikes involving 8,262 workers and resulting in a time loss of 19,761 man working days.

United States

Preliminary estimates of strikes in November, 1939, which as the Bureau of Labor Statistics points out are based on "scattered information from newspapers and other sources and are subject to revision as more definite reports are received" show 165 strikes as beginning during the month which with 125 unterminated at the end of October made a total of 290 in progress during the month. The number of workers involved in these disputes was approximately 125,000 with a resultant time loss of 1,600,000 man working days. The comparable figures for the previous month which have been partially revised but are not final, show that there were 315 strikes in progress involving about 130,000 workers with a resultant time loss of 1,500,000 man working days.

Training for Industries of National Importance

In reply to a question in the British House of Commons on the steps being taken for the training of new recruits for the less skilled operations in industries of national importance, the Minister of Labour and National Service stated that the Ministry of Labour Centres provide training in a number of occupations of special importance and at present include over 6,000 men.

The expansion of industries producing for war needs is however mainly effected by the upgrading of men already engaged in them and by the training of newcomers in the works themselves. This method is effective and, having regard to the large numbers involved, is the only practicable system for meeting the bulk of the requirements.

TRADE UNIONISM IN CANADA

Summary of the Twenty-Eighth Annual Report on Labour Organization

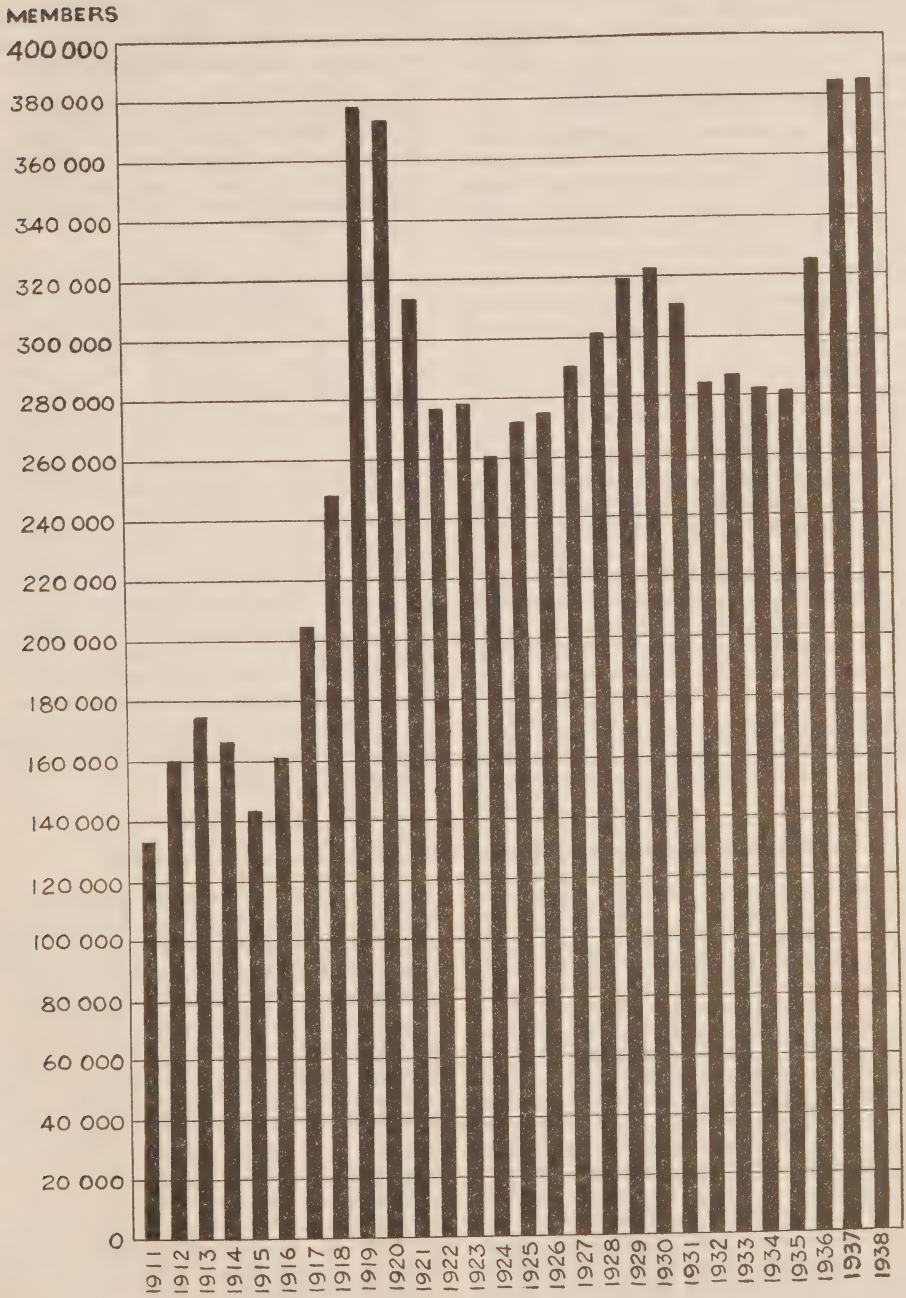
THE twenty-eighth annual report on Labour Organization in Canada, covering the calendar year 1938, has been published recently by the Labour Intelligence Branch of the Department of Labour. The purpose in publishing these reports is to present as accurately as possible the standing of the trade union movement in the Dominion. The many phases of the movement, as well as the various central bodies operating in Canada, are discussed at some length in the report. Labour organizations are classified under two main headings, viz., local branch unions of international bodies, those having membership in the United States and Canada, and unions the membership of which is wholly in the Dominion. There are also two principal types of labour bodies: (1) the craft union, which includes workmen in a single craft or a number of closely related crafts or trades, for instance bricklayers and stone masons; and (2) the industrial union, having members in the various occupations in a particular industry, such as coal mining.

Trade Union Membership.—The total membership of all classes of trade unions in the Dominion, as at December 31, 1938, was 385,039 an increase of 420 over the previous year, comprised in 3,318 local branch unions, a gain of 60, as compared with 1937. The International union group, consisting of the Canadian members of 98 central organizations, 2 more than recorded in 1937, had 2,086 branches in the Dominion, an increase of 38, with a combined membership of 230,547, a gain of 13,082. The group of Canadian central organizations, which numbered 30, a loss of 1, had 878 branches, an increase of 25, with a combined membership of 91,764, a decrease of 6,869. The National Catholic group consisted of 292 syndicates and study circles, an increase of 7, with a combined membership of 50,188, a loss of 1,812. The independent units numbered 62, a decrease of 10, the membership reported by 58 units being 12,540, a loss of 3,581 as compared with 16,521 reported by 67 units in 1937.

Percentage of Trade Unionists and Organized Wage-Earners to Population.—According to the latest estimate of population (June 1, 1938), trade unionists in 1938 represented about 3·44 per cent of the total population of Canada; adding 136,120, the number of members in the non-trade union associations, the organized wage-earners in the Dominion at the close of 1938 represented 4·65 per cent of the population.

Twenty-eight Years of Trade Unionism in Canada.—The accompanying chart based on the membership figures indicates the fluctuations which have occurred in the standing of organized labour in the Dominion for the past twenty-eight years.

Union Membership by Industrial and Trade Groups.—The division of union membership among the various industries and trade groups is shown in the accompanying table. The membership of each central body is included in the trade group in which most of its members are employed.



Groups of Industries	Membership	Per-centage
Mining and Quarrying	31,212	8·1
Building	31,132	8·1
Metal	35,608	9·3
Printing and Paper Making	25,386	6·6
Clothing, Boots and Shoes	36,364	9·4
Railroad Employees	80,950	21·0
Other Transportation and Navigation	35,006	9·1
Public Employees, Personal Service and Amusement	40,372	10·5
All Other Trades and General Labour	69,009	17·9

Trade Union Branches by Provinces.—The division by provinces of the 3,318 local branch unions of all classes in Canada for 1938 was as follows: Ontario, 1,214; Quebec, 713; British Columbia; 345; Alberta, 286; Manitoba, 204; Saskatchewan, 194; Nova Scotia, 188; New Brunswick, 164; and Prince Edward Island, 10.

Trade Union Membership in Canadian Cities.—There were 30 Canadian cities having not less than 20 trade union branches, one less than the number recorded in 1937. The 1924 branches in these 30 localities represented 58 per cent of the local branches of all classes operating in Canada. The 1,717 reporting branches in these cities represented 58 per cent of all reporting branches in the Dominion.

Unions Having Large Memberships in Canada.—Of the 98 international organizations with branches or members in Canada, there were 18 with 5,000 or more members, 7 of these being composed of employees who are identified with railway operations. In the Canadian group were two bodies with over

TWENTY-EIGHT YEARS OF TRADE UNIONISM IN CANADA

5,000 members, one being a railway organization. These 18 bodies represent a Canadian trade union membership of 181,419 (comprised in 1,308 local branches)—47 per cent of the total membership and 39 per cent of the total trade union branches.

Trade Union Benefits.—Of the 30 Canadian central organizations making returns to the department, 7 reported expenditures for benefits, the total amount disbursed being $86,910.44, an increase of $39,252.66 as compared with the figures furnished by 6 organizations in 1937. Of the 98 international bodies operating in the Dominion, 56 reported having expended in Canada and the United States a total of $19,297,456 in benefits, a decrease of $1,609,017 as compared with the previous year. The disbursements of the international organizations in 1938 for the various classes of benefits were:—

Death benefits.. .. ..$	12,408,920
Unemployed and travelling benefits.	276,114
Strike benefits..	880,076
Sick and accident benefits..	1,658,023
Old age pensions and other benefits.	4,074,323

In addition to the expenditure made by the central organizations, the local branch unions disbursed benefits to their own members. The aggregate amount of such expenditure by 883 local branch unions was $381,228, which was $57,666 larger than that reported in 1937, by 811 local branches. The outlay for the various classes of benefits by local branch unions in 1938 was:—

Death benefits.. .. ..$	51,377
Unemployed benefits..	104,735
Strike benefits..	33,186
Sick and accident benefits..	124,401
Other benefits..	67,529

Non-Trade Union Associations.—Apart from the organizations identified with the trade union movement in the Dominion, there are a considerable number of associations in Canada which cannot be included in the category of trade unions. The importance of such associations, however, warrants some reference to them in a publication designed in part to indicate the numerical strength of organizations of wage-earners operating in Canada. Reports were received from 136 such bodies, including associations of school teachers, government employees and commercial travellers, with a combined membership of 136,120.

Complete Labour Organization Directory.—As in previous issues, the twenty-eighth annual report on Labour Organization in Canada includes a complete labour organization directory, containing not only the names and addresses of the chief officers of local branch unions and delegate bodies in the Dominion, but also those of the central bodies with which Canadian trade unionists are identified. Another feature of this directory is the recording of the names and addresses of the chief officers of those local unions concerning which information was received, in the department, which were formed during the interval between the dates at which reports were received from the central organizations and the publication of the review. So far as possible the names and addresses of all officers mentioned in the directory are corrected to date of printing.

Copies of this report may be obtained from the Department of Labour at a nominal charge of 50 cents per copy.

Military Service and Reserved Occupations in Australia

A provisional list of reserved occupations similar to that issued in Great Britain has now been published in Australia. The list is intended to serve as a guide to the principles that will be followed in deciding what exceptions from military service are desirable in the interests of maintaining industrial stability.

The statement that accompanied the list declared that "volunteers for enlistment in the combatant forces of the Commonwealth will henceforth be accepted only subject to restrictions as to certain industries. The object of the restrictions is to ensure that, while the requirements of the combatant forces are met, those men whose services in other occupations are essential to national requirements shall not be permitted to enlist in the fighting services". The Minister for Defence made clear, however, when commenting on the list, that its publication did not mean that any person covered by it could not offer himself for enlistment, nor did it mean that anyone already on military service who might be regarded as belonging to one of the specified groups would be removed from the army. It was intended merely as a general guide in determining the allocation of man power.

Previous to the publication of the list, the Military Board had issued instructions to commanding officers of militia units to release from military duty as far as possible all men called up for various duties who held key positions in companies carrying out contracts for important defence requirements.

Shortage of Skilled Workers.—A shortage of skilled workers for defence needs has been reported by the Commonwealth Assistant Minister for Supply and Development. The position is expected to become increasingly difficult within the next twelve months, and in addition to skilled men a considerably greater number of semi-skilled workers will be required.

DOMINION AND PROVINCIAL LEGISLATIVE PROPOSALS OF CANADIAN LABOUR ORGANIZATIONS

Presentations by the Confederation of Catholic Workers of Canada—All-Canadian Congress of Labour—Canadian Federation of Labour—Trades and Labour Congress of Canada.

FOR the purpose of presenting its annual memorandum of proposed legislation to the Dominion Government, a delegation of the Confederation of Catholic Workers of Canada headed by its general president Mr. Alfred Charpentier met members of the Dominion Cabinet on January 16.

The delegation was welcomed by the Hon. Norman A. McLarty, Minister of Labour, and other members of the Cabinet present were:—Rt. Hon. E. Lapointe, Minister of Justice; Hon. J. E. Michaud, Minister of Fisheries; Hon. C. G. Power, Postmaster-General, and Hon. J. L. Ilsley, Minister of National Revenue.

The Minister of Labour, after noting the contents of the memorandum, thanked the Confederation for its offer of co-operation which he characterized as being "most timely, most helpful and most appreciated." Discussion on the detailed requests contained in the memorandum were then carried on between the Minister of Justice and the president of the Confederation and several of his colleagues.

At the outset, the memorandum re-pledged the Confederation's "fullest co-operation to the Federal Government" and stated that "We recognize the duty we have, particularly at the present time, of collaborating with the Government of Canada to prevent our industries from being paralysed by any labour conflicts."

In the attainment of this objective the Confederation urged the generalization of the use of collective labour agreements and that the Federal Government reach an understanding with the Provincial Governments "to legally oblige both employers and employees in all industries where the latter are sufficiently organized, to participate in joint conferences with a view to entering into such collective labour agreements." In this connection it was also suggested that in order to assure the regularity of industry during the war the Federal and Provincial Governments should reach an understanding to guarantee workers the right of revising wage scales to correspond with fluctuations in living costs.

The Confederation reiterated its request that legislation be presented to Parliament prohibiting the legal existence of the Communist Party.

Unemployment Insurance

Again expressing itself as being in favour of unemployment insurance on a national and contributory basis, the Confederation's memorandum stated: "We eagerly desire that the Federal and Provincial Governments arrive at an understanding as soon as possible on the most appropriate constitutional methods in the application of such a helpful measure." It was also suggested that any Act covering the establishment of unemployment insurance should include sickness and invalidity.

National Housing Act

The Confederation requested that the National Housing Act be extended to March 31, 1941 and that the construction of workmen's houses under Part II of the Act be facilitated.

Combines Investigation Act

The amendment of the Combines Investigation Act was requested, it being suggested that an insertion be made at the end of subsection one of Article 2 of the Act, the amendment to read as follows:—

"Nothing in this section shall be construed to apply to collective agreements between one or more trade unions, and one or more employers or association of employers for the purpose of fixing uniform conditions of employment and minimum prices to be charged to consumers for the services to be supplied as a result of such employment provided said agreements are legally entered into and made binding under the laws of the province in which they are intended to be effective."

Old Age Pensions

The Confederation again requested that the present old age pensions scheme be made a contributory old age insurance plan. Pending the institution of this proposal it was suggested that old age pensions be paid at the age of 65 years instead of 70 as at the present time.

Other Proposals

Other proposals contained in the Confederation's memorandum included suggestions for the overcoming of any ambiguity in the enforcement of the Sunday Observance Act; favouring the adoption of "all necessary steps"

to prevent the importation of foreign goods competing unfairly with Canadian goods and industries; resumption of the study of the possibility of making uniform the different Companies Acts in Canada; more restrictive measures in the granting "of temporary sojourn permits in Canada to alleged experts"; requesting that a delegate of the Confederation be appointed as a member of the labour group included in the Canadian delegation to the International Labour Conference; requesting the establishment of a Federal Economic Council; etc.

Reply of Minister of Justice to Delegation's Submission

Replying to the delegation's submission on behalf of the Dominion Government, Rt. Hon. Ernest Lapointe, Minister of Justice, thanked the delegation for the benefit of the Confederation's views as presented in the memorandum.

Dealing with Communism, Mr. Lapointe stated that the Government had already taken and would continue to take all necessary measures to prevent the dissemination of subversive ideas in Canada and added that such measures were equally aimed against Nazism.

Referring to the Confederation's representations in connection with unemployment insurance Mr. Lapointe pointed out that under the terms of the British North America Act, the central Government cannot compel the provinces or employers to contribute to a system of unemployment insurance, nor can the provinces transfer to the Dominion their powers in this regard allotted to them under the British North America Act. The only possible solution therefore, stated Mr. Lapointe, lay in the amendment of the British North America Act in such a manner as to permit the adoption of a national system of unemployment insurance. The Dominion Government, he added, was presently negotiating with the provinces with a view to securing the required consent for the adoption of such an amendment.

Mr. Lapointe also expressed agreement with the Confederation that the ideal old age pension system would be a contributory plan. In closing the Minister of Justice congratulated the delegation on its well prepared presentation.

Canadian Federation of Labour

On January 25, the Canadian Federation of Labour submitted its legislative requests to the Dominion Government, the memorandum being presented by Mr. Allan Meikle, president, and Mr. W. T. Burford, secretary-treasurer of the Federation.

In commencing, the Federation reiterated "its assurance of practical co-operation in the fulfilment of Canada's paramount obligation to share in the defence of the British Commonwealth" and stated that "only in so far as it may help the Government in this primary task will the Canadian Federation of Labour venture to offer counsel."

War Administration

The Federation congratulated the Government upon the consummation of the Empire Air Training scheme and expressed gratification "at the quick recruitment, organization and dispatch of the First Canadian Division of land troops." Referring to mobilization, the Federation expressed the belief that in so far as "mobilization extends to industry the principle of voluntary service should be maintained wherever possible, not because of any moral objection to the conscription of men, materials or money but because the voluntary way is usually more economical." For this reason the Federation recommended that no further administrative agencies should be set up to regulate industrial affairs.

Referring to the findings of a Royal Commission which inquired into ordnance problems in Great Britain six years ago, the Federation expressed the belief that the state manufacture of war supplies "by eliminating competition and discouraging invention has all the evils of cost plus operation without any compensating advantages."

Wartime Prices and Trade Board

The Federation commended the Government's active measures to prevent profiteering in war materials and in the ordinary commodities of domestic consumption. Reference was made to the "initial success of the Wartime Prices and Trade Board under the direction of the Minister of Labour as a striking demonstration of what can be accomplished by enlisting the voluntary co-operation of industrial management with a modicum of compulsory power to cope with exceptional recalcitrancy."

Wages and Cost-of-Living Bonus

The Federation expressed the opinion that wages should be augmented by an allowance to compensate for any decrease in the purchasing power of money and recommended "that the Minister of Labour should periodically anounce such changes in the cost of living as occur, and that he should urge the adjustment of the cost-of-living allowance bonus accordingly." The Federation further

suggested "that the cost-of-living allowance should be particularly applicable to workers who ordinarily receive no more than the income in pay, allowances, and supplementals of a private soldier on active service who has a family to provide for." It was pointed out that the cost-of-living provisions in all wage agreements which the constituent unions of the Canadian Federation of Labour have made since the war began recognize this limitation.

The Federation's memorandum also contained recommendations for the removal of anomalies in the rates of pay in the Army, Navy and Air Force and that all rates of pay be put upon an equitable basis; and that steps be taken to prevent, as far as possible, the occurrence of wide disparities between military and civilian rates of pay.

Co-ordination of Railway Services

As an economy measure the Federation recommended the co-ordination of railway services. It was considered that the objection on the ground of the resultant unemployment of railroad men had been removed by the 1939 amendment of the Canadian National-Canadian Pacific Act providing for compensation for employees adversely affected by co-operative economies. The belief was also expressed that by lowering the age of eligibility for retirement on pension from 65 to 60 "co-ordination could be effected without diminishing the younger men's opportunity of advancement to senior positions."

Civil Service

Referring to the Civil Service, the Federation expressed the hope "that in making economies in the Civil Service of Canada regard will likewise be had to expectation of periodical salary increment which is an established condition of employment, and in the main an assurance against expensive variations of personnel."

Industrial Sabotage

The Federation also requested the Government "to give due attention to the need for protection against industrial sabotage," in view of the important role Canadian industry is playing and is destined to play in munitions production. The internment of probable enemy agents was requested, particular reference being made "to persons showing their attachment to the Communist Party and its subsidiaries by their prominence at meetings of those organizations during the last five years."

Unemployment Insurance

Concluding its memorandum the Federation stated:

"With the end of the war still far out of sight, the Federation believes that no good purpose would be served by preparing in any detail for the outbreak of peace. It hopes however that the Government will proceed as early as possible to fulfil the intention expressed two years ago to introduce a national system of unemployment insurance, as some such provision to cushion the shock of a cessation of munitions employment will undoubtedly be needed. No one can foretell what economic and social changes may occur in Canada during a long war, and until there is some indication of the shape of things to come any attempt at more than very general planning would seem to be futile."

All-Canadian Congress of Labour

On January 26, Mr. A. R. Mosher, president, Mr. N. S. Dowd, secretary-treasurer, and Mr. M. M. MacLean, secretary, Canadian Brotherhood of Railway Employees, presented a memorandum of legislative requests on behalf of the All-Canadian Congress of Labour to the Dominion Government.

Confirming the Congress' previous pledge of support and co-operation to the Government made at the outbreak of war in September the memorandum stated: "This pledge of support is gladly confirmed, and will be carried out both in the letter and the spirit. The Canadian workers whom the Congress represents believe that the war should be vigorously prosecuted, and as loyal and patriotic citizens, they are willing to take their share of the war-effort. It is desirable, however, to emphasize at the outset the necessity of maintaining unimpaired the traditional rights of citizens of a democracy. Even if it be granted that it is necessary for the Government to adopt legislation under which it is granted wide powers, these should be so clearly defined as to enable every citizen to understand them and they should be used with discretion. It is generally assumed that the war is being fought to maintain the principles of democracy, and any infringement of those principles should be made only on grounds which are so obviously necessary that no reasonable person could object to them. Under the stress of wartime, there is a tendency to magnify offences out of all proportion to their importance, and the Government is urged to do everything possible to ensure that excess of zeal is not permitted to undermine at home the rights which our country is striving to defend overseas."

The Congress drew special attention to the fact that British regulations had been amended "so as to preserve practically unimpaired the right of free discussion and the right of labour to organize and to take strike action" and suggested that Canadian regulations should be similarly amended "since in their present form they curtail civil liberties to an extent which appears to be far beyond that necessitated by the war."

The Basic Problem of Civilization

Stating economic insecurity as being the fundamental cause of the evils prevailing throughout the world to-day, the Congress maintained that "even in the midst of war, there should be a widespread realization that the solution of the economic problem would solve almost every other problem which confronts mankind." The Congress urged that attention should be given by the Government "to the preparation of plans for the employment of returned soldiers as well as those workers who will be thrown into the ranks of the unemployed after the cessation of war activities."

Unemployment Insurance

Referring to the subject of unemployment insurance the Congress' memorandum stated:

"The Congress is interested to learn that the Government is considering the introduction of legislation at the present session of Parliament for the provision of unemployment insurance, and is communicating with the provincial governments with respect thereto. It is hoped that a determined effort will be made this year to put through the necessary legislation, and to bring Canada into line with other industrialized nations which have recognized the desirability of this measure of social justice. While it is no more than a palliative of the distress due to unemployment, this in itself is of some value. In this connection, the Congress desires to reiterate its opinion that unemployment insurance should be dealt with federally, on account of the need for uniformity throughout the Dominion."

It was pointed out that the present time with improved employment conditions due to war conditions afforded a favourable opportunity of introducing a system of unemployment insurance, and that these conditions would afford a larger number of workers to come under the scheme than in so-called normal times and would lessen the difficulties of post-war adjustments.

The Congress also repeated its request that in any scheme of unemployment insurance provision should be made to exempt workers who are in receipt of wages below a definite minimum. The Congress also considered "that the cost of unemployment insurance should be a direct charge upon industry, but if a contributory scheme is adopted, at least the low paid workers should be exempted from payments thereto."

Opposition to Railway Amalgamation

The Congress considered that the passing of the amendment to the Canadian National-Canadian Pacific Act providing compensation for railway workers who lose their positions because of the adoption of co-operative plans "has given the people of Canada a misleading impression that displaced railway workers would be adequately compensated and thus tended to lessen their opposition to more comprehensive schemes."

The memorandum then reiterated the Congress' belief "that all forms of transport should be co-ordinated and operated in the public interest, but that this should be carried out only as a part of a national system of public ownership and operation of the means of production and distribution."

The Congress' stand in regard to the St. Lawrence Waterway was that "this huge undertaking with its important international aspects and the Federal and Provincial interests involved should be given careful study by the Governments concerned, and that no action should be taken until the project has received unmistakable approval by the Canadian people."

Old Age Pensions

The Congress recommended that the Old Age Pensions Act be amended to provide for the payment of pensions at 60 years of age. If this was done, the Congress was of the opinion that younger workers who are now unemployed would be able to secure employment.

Nationalization of Munition Plants

The Congress urged the nationalization of the manufacture of arms and munitions "to prevent profiteering in war-supplies generally" . . . . "since it is intolerable that profits should be made out of the necessities of wartime."

Government Employees

Expressing commendation and appreciation for the abolition of the Order in Council which provided that not more than 80 per cent of any unit within the Civil Service should be made permanent, the Congress protested "very strongly" against any proposal to stop the statutory increases for the duration of the war "on the ground that it involves a policy of wage-cutting, applicable to those who are least able to bear it, and sets a bad example to employers of labour generally."

Other Proposals

Other legislative proposals put forward by the Congress dealt with the establishment of a maximum eight-hour working day for all workers including those employed in agriculture and a minimum rate of fifty cents an hour for all industrial workers; holidays with pay to all workers for at least two weeks; Canada's Peace Policy; the League of Nations Society in Canada; etc.

In conclusion the Congress' memorandum declared:

"There are obviously many other matters of interest to the workers of Canada represented by the Congress with regard to which representations might be made. It is felt however, that emphasis should be laid primarily upon matters of urgency and importance at the present time. The chief concern of the Congress, in the field of legislation, is the maintenance of democratic institutions and the provision of economic security. These questions are closely allied, and it is impossible to lay too much stress upon them, even in wartime."

Trades and Labour Congress of Canada Memorandum of Legislative Requests to Government of Ontario

On January 17, the Trades and Labour Congress of Canada submitted its memorandum of legislative requests to the Government of Ontario. The delegation from the Congress was headed by Mr. Tom Moore, president, and Mr. R. J. Tallon, secretary-treasurer. Receiving the delegation were the following members of the provincial Government: Hon. N. O. Hipel, Minister of Labour; Hon. E. Cross, Minister of Municipal Affairs and Public Welfare; Hon. G. D. Conant, Attorney-General; Hon. T. B. McQuesten, Minister of Highways; Hon. L. J. Simpson, M.D., Minister of Education; and Hon. P. M. Dewan, Minister of Agriculture. Mr. J. F. Marsh, Deputy Minister of Labour was also present.

The Congress' memorandum opened by extending to the provincial Government its pledge of "unwavering support in Canada's war effort" given to the Federal Government. In this regard the memorandum further stated:

> Without modifying this in any way, experience of the past few months forces us to warn that our full co-operation can only be effective if the same willingness to co-operate is shown by those to whom it is offered. Our declarations should not, therefore, be misinterpreted as meaning we are willing to accept without question and submit to every edict imposed without consultation merely because it is claimed to be essential to the successful prosecution of the war. Employers who openly or by more subtle means seek to prevent organization of workers will continue to meet our stubborn resistance and the responsibility for any disruption of industrial activity on that score primarily is theirs.

The memorandum then expressed the Congress' desire of avoiding "every unnecessary controversy during this critical period" and urged the provincial Government to enact a measure based on the draft bill of the Congress prohibiting interference by employers with workers in exercising their right to organize; and recommending the representation of labour on Boards and Commissions where labour's interests are particularly affected.

Freedom of Association

Drawing attention to the disappointment voiced at the Congress' last annual convention upon the failure of the Government of Ontario to enact legislation guaranteeing workers against discrimination because of their forming or joining a trade union of their own choice, reference was made to the amendment of the Criminal Code by the Federal Government respecting the right of workers to organize into trade unions. In this connection it was pointed out that during the debate on the amending measure it was contended that the Federal legislation could only apply in Provinces where similar legislation existed. The Congress therefore urged that, as Ontario was the only one of eight industrial provinces without this enabling legislation, action should be taken at the present session of the Legislature to give effect to the Congress' previous requests in this matter.

Injunctions

The memorandum reiterated the Congress' "firm opposition" to the use of court injunctions in labour disputes and condemned them as being "fundamentally wrong and unjust interference with lawful conduct of strikes inasmuch as the issuing of temporary or interim injunctions prevents peaceful picketing and communication of information." The Congress requested the enactment of legislation prohibiting the issuance of such injunctions by local judges before both parties to the dispute have been afforded an equal opportunity to be heard.

Unemployment and Relief

In dealing with unemployment and relief the memorandum re-submitted the Congress' previous proposals for "the provision of better housing and the carrying on of essential public works including reforestation, highway construction, elimination of level railway crossings, etc., to provide employment for the

employables until their services may be required elsewhere, and that on such work a maximum eight-hour day be fixed and the prevailing union rates of wages paid." The Congress also reiterated that "at the opportune time a six-hour day and five-day week be established without reduction in the workers' aggregate earnings." Upward revision of relief scales "to meet higher prices of the necessities of life" was also advocated.

The Government was commended for its efforts in connection with the Dominion-Provincial Youth Training scheme, and it was suggested that as an additional phase of the program a forestry school for the technical training of young men be established in Ontario.

Social Security

Expressing the opinion that social and labour legislation to be fully effective should be national in scope the Congress asked "that the Ontario Government consent to amendments to the British North America Act to permit Federal enactment and administration of legislation of this character.

Unemployment Insurance.—Referring to the fact that the Government of the Province of Ontario had accorded its consent to the Federal Government to enact unemployment insurance legislation the Congress hoped "that full co-operation will be rendered so as to make immediately possible the enactment of this very necessary and long overdue legislation."

Old Age Pensions.—The Congress reiterated its request that a retirement scheme should be incorporated into the Old Age Pensions Act "whereby all who withdraw from industry or commerce at the age of sixty or over be entitled to receive benefits." Other amendments to the Act sought were: That there be no reduction in the amount of benefits where the recipient's income is less than $1,000 per year; that the practice of counting as income an amount equal to 5 per cent of the assessed value of a home owned and occupied by a pensioner be discontinued where it is shown that the pensioner has paid local taxes on the property; that the present scale of benefits be substantially increased, and that the clauses respecting Provincial residence qualifications and the signing over of property be eliminated, etc.

Other legislative proposals dealing with social security recommended the amendment of the Mothers' Allowance Act raising the property exemption to $5,000, and the institution of a system of hospitalization and medical care under state control.

Minimum Wages

The Congress stressed the need for increased enforcement of the Minimum Wage Act as it applies to women, girls and boys under nineteen years of age, where the latter are not already covered by the Apprenticeship Act or trade union agreement; the bringing of domestic help and employees located on the outskirts of industrial centres within its scope; that workers seeking the aid of the Minimum Wage Board be accorded legal protection and guaranteed all back wages without having to go to court to obtain the same; and that organized labour be given direct representation on the Board administering this legislation.

Industrial Standards Act

Referring to the administration of the Industrial Standards Act the Congress stated:

While not denouncing the principals of this Act and holding the opinion that it could be of valuable assistance in stabilizing conditions in industry, experience has shown that under the unfriendly administration of the present Board, the purposes of the measure are being largely frustrated. On numerous occasions during the past two years changes in the personnel of the Board have been requested and evidence submitted in justification of this. We regret to say there has been no improvement shown in the administration. We therefore firmly ask that the Board be reconstituted under a new chairman and a labour representative included in its membership.

It is also suggested that to be really effective, the cost of securing compliance with the provisions of this Act should be borne by the Government and more adequate inspection provided.

Other Proposals

Other legislative requests and proposals contained in the Congress' memorandum included: Direct representation of labour on the Liquor Control Board; compulsory registration of barbers; requesting the rigid enforcement of the 11 o'clock limit for the employment of women under the Factory, Shop and Office Building Act and discontinuance of the issuing of permits under the relative section of the Act; endorsing the compulsory introduction of the three-platoon system in municipalities of 10,000 or more; compulsory institution in all municipalities of a superannuation and benefit fund to cover all permanent employees whether employed directly by the municipality or a municipal commission.

The Congress registered its opposition to the use of one-man cars and buses "as a danger to the public" and pending action prohibiting this type of operation suggested that legislation be enacted to prevent operators from performing other duties while such vehicles are in motion. It was also suggested that strain on the operator resulting in nervous or other breakdown in health should be classed as an industrial disease under the Workmen's Compensation Act.

The memorandum also reiterated the Congress' requests for action respecting the

following: Compulsory employment of one certified projectionist for each motion picture machine; compulsory introduction of sprinkler systems in hotels, hospitals, orphanages, homes for the aged; apartment houses, etc.; regulations governing the use of poisonous materials in industrial processes and sand-blasting operations; legislation for the compulsory bonding of lawyers, notaries and others handling trust funds; maintenance of competent life-guards at bathing beaches; free text books to all school pupils, etc.

Reply of Attorney-General

Following the presentation of the memorandum the Attorney General, Hon. G. D. Conant, dealt particularly with the Congress' representations in connection with freedom of association, and stated that provincial legislation was not necessary to make the amendment to the Criminal Code effective in the province, declaring:

"There is no question of the right of men to form a union and there is nothing that we could pass that would add one iota to the legal situation." Mr. Moore then suggested that a practical test might be made to clarify the legal confusion. To this Mr. Conant replied that his department was always ready to take action whenever there was any substantial complaint of interference of any employer with the rights of workers.

ANNUAL CONVENTION OF NEW BRUNSWICK FEDERATION OF LABOUR

THE twenty-seventh annual convention of the New Brunswick Federation of Labour was held in Moncton, N.B., on January 9, with the president of the Moncton Trades and Labour Council, Mr. F. H. Weir, presiding.

Among the guests of the convention who addressed the delegates was Dr. Charlotte Whitton C.B.E., Executive Director of the Canadian Welfare Council who spoke on welfare matters drawing attention to the necessity of further welfare legislation in the Province. Miss Whitton pointed out that New Brunswick had one of the best Children's Protection Acts of any province in the Dominion but that it had not been proclaimed and brought into force assumedly because of the cost of administration.

Following the preliminary proceedings Mr. Jas. A. Whitebone, president of the Federation, declared the convention officially opened and announced the appointment of the Credential and Constitution Committees. The Credential Committee later reported 37 locals and 2 councils had sent in the credentials of 77 delegates, and that 35 locals and 2 councils had 60 delegates in actual attendance.

The following fraternal delegates were also present and extended greetings from their respective organizations: R. J. Tallon, secretary-treasurer, Trades and Labour Congress of Canada; Magnus Sinclair, International Representative, A.A. of S. and E.R. and M.C.E.; J. Frank Caine, chairman of the Joint Provincial Legislative Committee of the Railway Transportation Brotherhoods; and E. R. Steeves, vice-chairman of the New Brunswick Workmen's Compensation Board.

The president and secretary-treasurer each submitted detailed reports on the business of the Federation during 1939, and forty-nine resolutions were referred to various committees of the convention and in due course these committees reported back to the convention.

Resolutions Adopted

Among the resolutions adopted by the convention was one endorsing the action of the Trades and Labour Congress of Canada in pledging the full support of Labour to the Government in the prosecution of the war and also pledging the Federation's co-operation and support to the Provincial Government in its war work.

The following is a summary of the other resolutions adopted by the convention:

Recommending that the Provincial Government pass legislation that would give a Federal Commission control over all transportation by water, rail, on the highway and in the air.

Requesting Federal and Provincial assistance for fishermen in the establishment of co-operatives.

Urging the Government to pass legislation permitting workers two hours off work with pay on election days.

Favouring direct labour representation on all public boards and commissions.

Favouring the organization of all technical men into trade unions.

Urging stricter enforcement of regulations governing licensed trades.

Favouring the affiliation of the Railway Running Trades with the Trades and Labour Congress of Canada and the Federation.

Opposing the use of Court Injunctions in labour disputes.

Requesting that all unemployed be put to work on necessary jobs and paid the prevailing rate of wages for an eight-hour day, and that those unemployed be adequately supported until such work is provided.

Urging the conservation of the forests.

Endorsing the adoption of a modern apprenticeship system.

Urging the complete nationalization of all social and labour legislation and pressing the Provincial authorities to consent to the necessary amendments to the B.N.A. Act to permit such nationalization.

Requesting that the homes of old age pensioners be exempt from deductions.

Superannuation of all workers serving 25 years in an industry.

Urging the adoption of the six-hour day and five-day work week by law.

Requesting legislation providing for state hospitalization and medicine.

That all industrial diseases be included under the Workmen's Compensation Act.

That all domestic servants be included under the Minimum Wage Act for Women and Girls.

Urging the Provincial Government to take steps to give effect to Part II of the National Housing Act.

Urging the partial exemption from taxes of small homes.

That 50 per cent of all licence fees and gasoline taxes be paid to the municipal authorities.

Requesting legislation to compel all vehicles to stop at all railway crossings, and that road markers be brought up to date by the insertion of reflector buttons.

That the principle of free school books be extended up to and including grade nine.

Establishment of legislation abolishing arrest for debt.

Requesting legislation providing for vacations with pay for all permanent workers.

Urging that the provisions of the Labour and Industrial Relations Act be extended to include Government employees.

Requesting a superannuation scheme for all Provincial Government employees.

That three weeks vacation with pay be granted to Provincial Hospital nursing attendents.

That a 48-hour week for Provincial Hospital employees be adopted.

Urging the amendment of the Labour and Industrial Relations Act in order that employers must bargain with their employees collectively when properly organized.

That legislation be adopted protecting workers' wages when employed by government contractors.

The following were elected to serve as executive officers of the Federation for the ensuing year: President, Jas. A. Whitebone, Saint John; 1st Vice-President, G. W. Roy Myles, Moncton; 2nd Vice-President, T. J. Lawlor, Dalhousie; 3rd Vice-President, E. C. Camick, McAdam; Legislative Representative, J. S. MacKinnon, Saint John; and Secretary-Treasurer, Geo. R. Melvin, Saint John. District Vice-Presidents were elected for each county in which there is an affiliated union. Edmundston was chosen as the next convention city.

During the progress of the convention, it was noted that the only two living Past Presidents of the Federation, C. A. Melanson and E. R. Steeves, were present as delegates and on a motion being unanimously adopted they were made life delegates to future conventions.

PENSION PLAN OF TORONTO TRANSPORTATION COMMISSION

According to an article appearing in the January issue of *Canadian Transportation* the employees of the Toronto Transportation Commission, by 1,112 votes to 461, approved of entering into an agreement with the Commission for the inauguration of a contributory pension plan effective January 1, 1940.

Benefits.—Under the plan, the amount of pension payable to the employees upon retirement depends upon the number of years of service and the annual earnings of the employee concerned. "Final average earnings" on which the pension is calculated, is taken as one-fifth of the five best years' earnings in the last ten consecutive years of service. Pensions are payable monthly and under the plan a male employee may retire, if he wishes, at the age of 65, and must retire at the age of 70. For female employees, the optional retiring age is 60 and the compulsory retiring age, 65. To be eligible for a pension, an employee must have at least 25 years' continuous service, at his retirement age. It is also provided that employees now over 70 years old, and with 25 years' service are eligible.

The amount of pension payable is calculated as being equal to $10.50 plus one-quarter of 1 per cent of the final average earnings, multiplied by the number of years of service. Thus in the case of an employee whose average annual earnings were $1,600 and length of service 40 years, the annual pension would be equal to $10.50 plus ¼ of 1 per cent of $1,600 multiplied by 40 which would equal $580.

Pension Fund Contributions.—The pensions are to be paid from a pension fund built up of deposits as follows: An initial payment of $250,000 by the Commission, an annual payment of $149,000 by the Commission paid in monthly instalments, and an annual payment by the Commission based on one-half of 1 per cent of the earnings of new employees.

Employees are to contribute 3 per cent of their wages and salaries estimated to produce a deposit of $120,000 a year into the fund. The deposit of each employee will draw interest at 2½ per cent compounded and if the employee dies or leaves the service of the Commission prior to reaching retirement age, his deposits will be refunded in full, together with accumulated interest.

Pensions will be paid monthly during the lifetime of the pensioner, it also being provided that should a pensioner die after receiving any pension money, but before having received in monthly payments an amount equal to the total deposits to his credit, the difference between such total deposits and the total amount of pension paid will be refunded to his beneficiary.

The pension fund, and all questions relating to pensions, is administered by a joint board of officials and other employees.

RECENT REGULATIONS UNDER PROVINCIAL LEGISLATION

Quebec Fair Wage Act, Rules of Interpretation, and repeal of Order 1-2-3 —Safety Regulations in Quebec—Saskatchewan Regulations Governing Income Tax Deductions for pension fund contributions —First regulations under Saskatchewan Trade Schools Regulation Act.

THE Quebec Fair Wage Board has repealed Order 1-2-3 which regulated wages in factories and shops in rural districts and Order 4 now covers the whole province. Rules of interpretation have been issued as an appendix to Order 4 and govern that order and others relating to particular industries or occupations. The order covering sash and door factories is again suspended for two months from January 3 and there is a new order for canneries. Safety regulations have been made under the Quebec Industrial and Commercial Establishments Act for window cleaners in factories. In Saskatchewan regulations determine the conditions, for income tax purposes, of deductions on account of contributions by employers to an employees' superannuation or pension fund. The first regulations under the Saskatchewan Trade Schools Regulation Act were also published recently.

Quebec Fair Wage Act

Rules of Interpretation governing Wage Orders

Pursuant to the 1939 amendment in the Act allowing the Board to issue rules of interpretation of the various provisions of its orders and decisions such rules were gazetted on January 20. They are to be read as part of Order 4 (Labour Gazette, 1938, p. 512).

Orders are to apply only to work done and salary earned within the province. Members of partnerships are not to be considered as employees. Population is determined according to the last published federal census or if the census is not definite it is fixed by the Board. For determining a period of apprenticeship a month is 26 working days and temporary employees are not to be included in the number of apprentices. The orders do not cover boys and girls in reformatory and industrial schools.

Orders applying to the district within a fixed radius of Montreal affect only municipalities totally within that radius and orders applying to cities and towns cover those subsequently incorporated as well as territory subsequently annexed to them. The zone in which such cities and towns falls is to be determined by their population or if the population does not appear in the census report, they are to be considered as in the zone for which the lower rates are fixed unless the Board decides otherwise. Persons employed by regular employers are to be regarded as in the same zone as the establishment in connection with which they work; if an employer has workplaces in several zones the workers are to be considered as in the zone where the work is done. A worker employed by a person who is not a regular employer is to be paid according to the rate for the zone in which the work is done and, if he works in more than one zone in the same week, at the rate for the zone where the employer resides. In motor transport the workers are to be paid according to the rates for the zone in which are the employer's headquarters. Workers no longer covered by a collective agreement are to be governed by rates for the category in which they would fall under Order 4. In all cases the Board may, by resolution, determine the zone and the wage order which applies to any workman.

Ushers in theatres are to be treated like other workers in commercial establishments with the minimum rate applying to a week of 54 hours but in the case of ushers employed at hockey, baseball or other games, remuneration may take the form of free admission to the games. Employees in public buildings and apartment houses including elevator operators are also to be considered as employed in commercial and industrial establishments but the rates apply to a 60-hour week. The telephone operators for whom special rates are given in Order 4 are those employed by telephone companies. Other switchboard operators are to be regarded as office workers and paid accordingly. When operators work at night but are provided with beds or couches and have four to five hours for sleep, they may work up to 66 hours a week and be paid the minimum rate for a 48-hour week.

The class "office worker" includes persons employed by stock brokers, outside collectors, ticket sellers and collectors for railway and shipping companies, persons engaged in checking incoming or outgoing merchandise

for commercial or industrial establishments, persons in charge of stores or tools and persons employed by custom brokers to clear merchandise and determine rates of duty, etc.

The minimum rates for office workers are revised to permit lower rates for the first year of employment. Instead of minimum hourly rates of 25 cents, 22½ cents, 20 cents and 15 cents in the four zones into which the province is divided, 17 cents, 15 cents, 13 cents and 12 cents may be paid for one year. Beginners hired by the week may be paid for the first year in Zone 1, $8, $9 or $10 according as the regular work week is 48, 54 or 60 hours; in Zone 2, $7, $8 and $9; in Zone 3, $6, $7 and $7.75; and in Zone 4, $5.75, $6.25 and $7. The ordinary work week of office workers is according to Order 4, 48 hours but office workers in industrial and commercial establishments employed for the regular hours of the establishment must be paid for those hours. The new provisions permit bank messengers engaged by the year to agree to a 60-hour week for $600 or more. It is also provided that office workers in biscuit factories and bakeries in Quebec district who are not covered by the collective agreement governing these plants are, however, subject to the regulations as to hours of work, overtime and legal holidays laid down in the agreement as long as it is in force.

Another section of the new regulations stipulates that an employer who sells goods delivered and contracts with a carrier to deliver them is co-responsible for payment to the employees of the carrier for the wages fixed by the order. The rates for messengers are to apply to the normal weekly hours of the establishment where they are employed. Messengers working inside more than half the time and paid at the rate for the general workers are not to be included in calculating the percentage for the purpose of determining the numbers to which the different minimum rates apply. Persons employed in cloakrooms in hotels and restaurants are classed as messengers and girls peddling articles such as cigars, cigarettes, etc., inside an establishment are to be paid as sales girls.

Certain rules are laid down as regards hotel employees. Stenographers in hotels who are employed by other than the owner have a normal 48-hour week. Hotels of more than 50 rooms in Zones 3 or 4 are ordinarily required to pay the rates fixed for Zone 2 but if they close down rooms in winter to bring the number in use to 50 or less they are permitted to pay the rates for the zone in which they are actually situated. The weekly wage for bell-boys, porters and messengers based on a 60-hour week is raised from $5.40 to $6. Waiters in taverns and waiters, kitchen help and cooks in hotels, restaurants, etc., have a normal 60-hour week with a weekly salary of $15, $65 monthly and $780 yearly.

Except teachers, office workers employed by municipal corporations and school boards and church officers employed by parish vestry boards, all employees of public corporations are to have the same conditions as workers in industrial and commercial establishments who are employed for a normal 60-hour week. For firemen and policemen the normal week is 72 hours but cities and towns may arrange for a day shift of 10 hours and a night shift of 14 hours provided the average hours per week are 72.

When a watchman works regularly a 56-hour shift instead of 60 hours a week, any hours beyond 56 must be paid for at time and a half. Special constables in industrial and commercial establishments are to be classed as watchmen and not included in percentages. The provision for a weekly rest day does not apply to watchmen hired specially on account of the war. Watchmen or janitors regularly employed by one employer and working part-time for another are entitled, from the former employer, to 25 cents an hour with a minimum of three hours a day or $5 a week or $21 a month, subject to a deduction of $15 a month for a heated apartment. The employer is to furnish water, electricity and gas if they are installed in the building and must pay taxes for the apartment and the services.

Construction labourers not employed in connection with commercial or industrial establishments are to be paid 25 cents, 18 cents or 13 cents an hour in Zones 1 and 2, 3 and 4, respectively for a normal work-week of 54 hours in Zones 1 and 2 and 60 hours in Zones 3 and 4. Shoe polishers have a normal 54-hour week. The special rates for motor mechanics under Order 4 apply only where the garage in which they are employed is a separate undertaking and apply to a 60-hour week throughout the year. Other workers of the kind are to be paid according to the type of establishment in which they work.

The provision in Order 4 for maintaining the rates of wages in effect on January 1, 1938, if higher than under the order, which applies equally to wages on December 1, 1939, in the case of persons who on that date were not subject to Order 4, is declared not to apply to an employee engaged between January 1 and May 15, 1938, to replace one who had left or to a workman who, although employed in an establishment on January 1, 1938, and occupying the same position on May 15, 1938, agreed in the meantime to a reduction of salary or to the employee who replaces him. Neither does the provision

apply to those who, in December, 1937, were paid wholly or partly on a piece-work or commission basis nor to one not receiving in December, 1937, a wage above the highest minimum rate prescribed for persons employed in industrial and commercial establishments.

When the Board fixes by permit or special order for a certain establishment, a normal week longer than is fixed by the regular orders, workmen previously engaged by the week and paid at least from $20 to $30 a week depending on the zone, can claim payment for these additional hours only if they represent an increase over the normal hours in December, 1937, or on any other date at which this provision is made applicable by special order. When a special order governs employees subject to the provision concerning wages in effect on January 1, 1938, the rates to be maintained are only those which are higher than those fixed for Class "A" workers by the special order. The rates for December, 1937, need not be maintained unless expressly provided for in the order.

Methods are given for determining from the weekly rate hourly or monthly rates. When a workman works outside the employer's plant and beyond his control, the daily hours are fixed at one-sixth of the normal week. Time taken for lunch is not included in the work-period if it is noted in the time-book. Hours of drivers of vehicles include only the actual hours spent in charge of their vehicles, but if they must wait elsewhere than at their place of residence or departure for at least eight hours these hours must be counted in the ten hours in the day for which they are to be paid but not as overtime. The provision that payment must be made for at least three hours' work in any day applies to all part-time workers except those employed less than 30 hours a week, those working in the same day for two or more employers as watchmen, furnacemen, etc., employees such as maintenance men, cleaners, charwomen, furnacemen, janitors, etc., who do not work habitually a complete day but are hired for a month or longer and employees engaged and working regularly by the week or for a longer period but less than three hours a day.

The weekly limit of 72 hours for male workers is extended to 84 from April 20 to May 15 for persons employed in moving household goods but time and a half is payable for the hours in excess of 72. The provision for time and a half after 10 hours' work in a day where the normal number of hours per week is not exceeded applies only to workmen engaged by the hour. The overtime provisions of Order 4 are suspended in the case of employees in establishments subject to the collective agreement covering the shoe industry but who are not within the scope of the agreement but the regular hourly rates must be paid for all hours worked. The exception to payment of time and a half when weekly wages exceed $20, $25 or $30 according to the zone does not apply to employees paid by the hour to whom the time and a half rate is payable only after 72 hours' work. When holidays are granted instead of payment for overtime, the holidays must be granted within three months from the date overtime was worked.

The provision that an employee doing two kinds of work is to be paid the rate fixed for the higher paid occupation does not apply to work done partly in winter and partly in summer but only where the employee works at different occupations during the same period. Employers must give the Board on request the names and addresses of contractors arranging for home-work and they are not to change the numbers of employees so entered in the registers without permission from the Board. After February 1, 1940, when the provisions of Order 4 have been suspended because of the coming into effect of a special order in any district, the area not so covered becomes again subject to Order 4.

Repeal of Order 1-2-3

The repeal was effective on December 30 of Order 1-2-3 (Labour Gazette, 1938, p. 623) which applied to men and women in similar occupations in factories and retail and wholesale stores in rural districts. The provision in Order 4 (Labour Gazette, 1938, p. 512) exempting from its application municipalities other than those erected in cities or towns is repealed and the section defining the zones has been rewritten to bring under the order all factories and shops in the province. Factories outside cities and towns are treated as in Zones III or IV according to the size of the municipality. Otherwise the four zones under Order 4 remain unchanged. The only exceptions are that the textile industry in Chicoutimi is to be governed by the conditions of Zone IV and servants in hotels, restaurants, etc., and waiters in taverns in the city of Thetford Mines are to be considered in Zone III.

Canneries—Order 27 governing the canning industry, a draft of which was gazetted on June 3, 1939, is now published in final form to be in effect for one year from February 11 and renewable for another year. Exception is made of establishments open only from June 15 to October 15, those where the main industry is other than canning and food is canned only for the use of the principal industry, and

of religious or teaching institutions, etc. Quebec is divided into two zones, Zone I being Montreal and within a five-mile radius, the rest of the province making up Zone II. There are eight categories of workers. Part-time workers are those employed intermittently from June 15 to October 15 in plants operated throughout the year or for not more than 12 days, consecutive or not, during the other eight months if the days fall within a period at the end of which the workers must be reclassified in order to determine the numbers to which the minimum rates apply.

There is no prescribed work-period to which are to be applied the wages of travelling salesmen, part-time employees, or strawberry hullers but for other classes an overtime rate of time and a half is fixed for hours in excess of the prescribed period. Men working part-time in Zone I receive 25 cents an hour and 20 cents in Zone II; women 17 cents and 15 cents. All strawberry hullers receive a flat rate of one cent per quart, one-half cent per pint. For office workers and salesmen who work a 54-hour week in Zone I there is a 17 cents hourly rate for the first year, then 25 cents; in Zone II it is 15 cents and 22½ cents. Travelling salesmen must be paid at least $20 and $18 a week in the two zones. Stationary enginemen in Montreal and district are to work for the number of hours and receive for regular work and overtime the rates fixed by Order 6 (LABOUR GAZETTE, 1938, p. 624); in other parts of the province the rates are as for the general body of workers under this order, rates applying for a 60-hour week. Watchmen throughout Quebec work a 72-hour week and have a 25 cent minimum hourly rate; carters' and drivers' helpers are to receive 20 cents and 18 cents an hour according to the zone. Their work-week is 54 hours.

Sixty per cent of the male employees other than the above special classes are entitled to 35 cents an hour and the rest are to be paid 30 cents. The hourly rates in Zone II are 30 cents and 25 cents for the same percentages of workers. Females in comparative work are paid less: 60 per cent receive 24 cents and 40 per cent 20 cents in Zone I and in Zone II 22 cents and 17 cents for these percentages, respectively. Office workers and salesmen, carters' and drivers' helpers and employees not included in any of the other categories have a regular 60-hour week each year from June 15 to October 15.

Employees are to be classified every four weeks unless the Board issues a permit to the contrary. The provisions of Order 4 apply when not incompatible. However, temporary employees and strawberry hullers are not affected by the provisions that payment must be made for at least three hours when a man is called and willing to work, provision for a weekly rest day or for the maintenance of higher wages if fixed by agreement or otherwise on January 1, 1938. None of the employees covered by the order for the canning industry is entitled to the 15 per cent increase provided under Order 4 when an employee works less than 30 hours a week or for three hours or less in a day.

This order abrogates resolution 30 of June 15, 1938, which allowed employment during the busy season in seasonal industries of part-time workers at less than the regular rates.

School Teachers.—An order in council gazetted on January 20 amends Order 4 with respect to minimum salaries for school teachers. The minimum for any teacher employed by a school commission in any part of the province is now $300. Formerly, when the order applied only to cities and towns, the minimum was $300 if full lodging was provided; otherwise the wage was $400. Another change is the repeal of the order in council of December 22, 1938, permitting municipal or school corporations by majority vote to declare themselves exempt from Order 4.

Janitors.—An amendment in Order 14 dealing with maintenance men in public buildings in Montreal and district (LABOUR GAZETTE, 1938, p. 1099) concerns janitors employed on a part-time basis, and reduces the number of rooms for the care of which a man receives only living quarters. Formerly those looking after less than 60 unfurnished or 50 furnished rooms were entitled only to heated living quarters. Now janitors must be paid if the number of rooms exceeds 40 unfurnished or 30 furnished, the rate in the former case being 30 cents a month for each room over the fixed number and in the latter case 35 cents. The original order provided that this 30 cents additional rate was payable for rooms in excess of 60 unfurnished and the 35 cents rate for furnished rooms over 50. Where living quarters are not provided, an additional $10 a month is payable when the rooms are unfurnished regardless of the number instead of being payable only where there were more than 60 unfurnished rooms. The same wage is payable where there are less than 30 furnished rooms but if there are more than 30 furnished rooms, the janitor is entitled to $12 a month in lieu of living quarters, which was the sum fixed originally for more than 50 furnished rooms.

Sash and Door Factories.—Order 24 governing the manufacture of doors, sashes and wood building products is further suspended for two months from January 3, 1940, by order in council gazetted January 27.

Quebec Industrial and Commercial Establishments Act

By an order in council gazetted on January 5 a section was added to the general regulations under this Act in force since June 13, 1934, applying to window cleaners in factories the regulations of December 22, 1938, under the Public Buildings Safety Act. To prevent accidents persons washing windows from the outside are to use either a solidly built platform balcony or safety belts held with anchors or hooks.

Saskatchewan Income Tax Act

In line with a 1939 amendment in the Act providing that the deductions from income which are to be allowed on account of contributions made by employers to an employees' superannuation or pension fund must be approved pursuant to regulations made by the Lieutenant-Governor in Council, such regulations dealing with incomes earned in 1938 and in respect of fiscal years ending after August 31, 1938, were embodied in an order in council gazetted on January 15.

No deduction is allowed for a company's contributions set up in the nature of a reserve out of which pensions may be paid but where a company contributes certain amounts to the fund and retains a portion of an employee's salary, in computing the amount of the profits or gains to be assessed, if the company's contribution is set apart and entirely severed from the company the amount may be deducted by the company as well as by the employee. When a company makes a lump sum payment in Saskatchewan on account of an employees' superannuation or pension fund in respect of past services and the sum is irrevocably charged for the benefit of the fund one-tenth of the lump sum payment may be deducted in each of ten successive years commencing in the year in which payment is made.

Saskatchewan Trade Schools Regulation Act, 1939

The first regulations under this Act, gazetted on January 2 and in force on February 1, include regulations for all trade schools as well as those covering only beauty culture and hairdressing and barbering schools. Final interpretation of the regulations lies with the Commissioner of Labour and Public Welfare to whom an annual statement must be submitted. The regulations set out the procedure and the information required for the registration of a trade school. After registration the Commissioner's approval must be obtained for any change in a course of instruction or in the fees or texts or supplies required or in any advertisements, and he must be informed of any change in the teaching staff. He is to approve requirements for admission, qualifications of teachers, standards of instruction, length of courses, safety and sanitary conditions of buildings and suitability of premises. Salesmen of trade school courses must be approved by the Commissioner and neither agent nor operator may guarantee positions. No person under 16 may enter a trade school.

Every operator of a trade school must deposit with the Commissioner as security $1,000 for the payment of creditors holding judgments in respect of contracts for instruction. The judgment debtor is obliged to provide further security to maintain the sum at $1,000. A contract for a course of instruction may be terminated by written notice to the school or its representative or teacher and the student is entitled to a refund of moneys paid above fees for "the then current week and the seven weeks next following or for the then current month and the month next following." With the Commissioner's approval the student may arrange to take a course terminable on shorter notice. The student is also entitled to a refund when the operator of the school is not registered or the situation has been falsely represented.

The regulations dealing with beauty culture and hairdressing or barbering schools provide that a course is to consist of at least 1,000 hours of instruction and practice during not less than six months of which in the former case at least 250 hours and in the latter 150 hours must be instruction in theory or demonstration of technique by instructors. No short courses other than in manicuring are to be given except to operators returning for refresher courses and persons holding certificates of competency. There must be at least one instructor with two years' practical experience for each 15 students. Any licensed nurse or physician may instruct in sterilization of equipment and personal hygiene. Every school must be separated by a solid partition from any beauty shop or barber shop, as the case may be. There is restriction on the rates which may be charged for student services as well as the hours during which they may be performed. Students are to have an hour off for lunch between 12 noon and 2 p.m.

In addition to providing for the observance of the regulations concerning sanitation in barber shops which were issued on June 15, 1931, under the Public Health Act, the new regulations require every student to furnish a medical certificate. Instructors must do so annually and at such other times as the Commissioner may require.

OLD AGE AND BLIND PENSIONERS IN CANADA

Financial and Statistical Summary as at December 31, 1939

IN the accompanying tables, which have been prepared by the Department of Finance, information is given concerning the Old Age Pensions Act and the amendment to that Act providing for the payment of pensions to blind persons.

Old Age Pensions

In the first of the tables appearing with this article, particulars are given dealing with operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156; as amended by Statutes of 1931, Chapter 42), and under the various provincial concurrent acts, as at December 31, 1939. (The text of the Old Age Pensions Act was given in the LABOUR GAZETTE for April, 1927, page 375, and the new regulations were reviewed in the issue for March, 1938, pages 286-288.)

The Act made provision for the establishment of a Dominion-provincial pensions system to be effective in such provinces as might enact and give effect to special legislation for this purpose. All the provinces are now participating.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and over who is not in receipt of an income of as much as $365 a year and who has resided in Canada for 20 years, and in the province in which the application is made for the five years immediately preceding the date of the proposed commencement of pension. The Act also provides that an applicant must not have assigned or transferred property for the purpose of qualifying for a pension. Indians, as defined by the Indian Act, are not eligible to receive old age pensions.

The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to reduction by the amount that their private income exceeds $125 a year.

Under the provisions of the Act as it was first passed, the Department of Labour of Canada (then the administering Department) paid quarterly to each province one-half of the net sum paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty to seventy-five per cent of the net sum.

In order to avoid duplication of departmental activities and to secure centralization of responsibility in carrying out the provisions of the Act, which involves accounting control and supervision, the administration of the Old Age Pensions Act was by Order in Council dated March 1, 1935, transferred to the Department of Finance from April 1, 1935.

Pensions for the Blind

An amendment to the Old Age Pensions Act, assented to on March 31, 1937 (LABOUR GAZETTE, May, 1937, page 503) provides for the payment of pensions to blind persons who have attained the age of 40 years and have fulfilled other conditions set forth in the Act. Such persons must be so incapacitated by blindness as to be unable to perform any work for which eyesight is essential, and must not be in receipt of a pension or allowance in respect of blindness under the Pension Act or the War Veterans' Allowance Act.

The maximum pension payable to a blind person, whether married or unmarried, is $240 per annum. If, however, a blind person marries another blind person after March 31, 1937, maximum pension is reduced to $120. If a pensioner is unmarried, the maximum pension is reduced by the amount of his income from earnings or other sources in excess of $200 a year. If a pensioner is married to a person not receiving a pension in respect of blindness, his income is deemed to be the total income of himself and his spouse (including any old age pension payable to the spouse) less the sum of $165, and the maximum pension is reduced by the amount by which his income, so calculated, exceeds $400. If a pensioner is married to a person receiving a pension in respect of blindness, his income is deemed to be one-half the total income of himself and his spouse (excluding the pension in respect of blindness payable to his spouse) and the maximum pension is reduced by the amount by which his income, so calculated, exceeds $200.

Under agreements negotiated between the Dominion and the provinces, the Dominion contributes 75 per cent of the cost of pensions to blind persons, the provinces assuming the remainder of the cost of such pensions.

Regulations governing the payment of pensions to the blind were published in the *Canada Gazette* of August 28, 1937.

The accompanying tabular statistics indicate the extent of operations under this amendment to the Old Age Pensions Act.

OLD AGE PENSIONS—FINANCIAL AND STATISTICAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT DECEMBER 31, 1939

—	Alberta Act effective Aug. 1, 1929	British Columbia Act effective Sept. 1, 1927	Manitoba Act effective Sept. 1, 1928	New Brunswick Act effective July 1, 1936	Nova Scotia Act effective Mar, 1, 1934	Ontario Act effective Nov. 1, 1929

CANADIAN CONSTRUCTION ASSOCIATION

Annual Convention Featured by Resolutions on Post-war Preparation and Youth Training

WITH a registration of over 600 in attendance, the twenty-second annual convention of the Canadian Construction Association was held in Toronto on January 16-18.

Among the resolutions adopted were four of particular significance at this time, viz.: wartime policy, preparation for the post-war period, youth training, and trust fund legislation.

The resolution on wartime policy reaffirmed the stand the executive had taken and had already expressed to the Dominion Government, namely, that "the full resources of the construction industry are placed at the disposal of our country to bring the war to a successful conclusion."

In regard to preparation for the post-war period, the resolution, after declaring "it is inevitable that an unsettled period will follow after the close of the war unless definite precautions are taken," called upon its incoming officers to place before "the Dominion Government such representations as may be necessary, asking for the setting up of a commission or by such other means as may be deemed expedient, to have in readiness various schemes of work and industry fully prepared and financed, so that they may be set in motion directly the war is over."

The convention dealt with youth training in a resolution which advocated the appointment of a committee of three to represent the Association for the purpose "of meeting with a similar committee when appointed by the Canadian Manufacturers' Association to consider the necessary steps to be taken to bring about the appointment of provincial government committees to study and report on necessary reforms in vocational and trade training in relation to industry and business."

In addition the Dominion and provincial governments were urged "that the programs of youth training on a co-operating basis be continued, and particularly that part of the work which seeks to tie up vocational and technical school work with placement in industry."

The resolution on trust fund legislation placed the Association on record as favouring such enactments in all provinces along the lines of the Manitoba Act.

In his presidential address, Mr. C. D. Harrington emphasized that the Association's common objective should be to decide what is the best way in which the construction industry can serve Canada and to see to it that this objective is reached. In this respct he declared:—

"It is our duty to consider what measures may be necessary to prevent disorganization and financial loss, in the rapidly changing financial and business conditions. Further, we must seek measures which will tend to stabilize costs of labour and materials, so that there may be no undue wartime inflation, which, if permitted, will inevitably lead to another and perhaps even greater post-war depression."

After reviewing the position of the industry in a number of matters, Mr. Harrington referred to the administration of the housing legislation as follows:—

"There has been a very encouraging advance during the past year in the operation of the National Housing Act. The government has apparently found it necessary to make some restrictions as from the first of this year, cutting out apartment houses and duplexes and houses over $4,000. This, I feel, was justified under war conditions. I think we should be prepared to urge the government to continue help to the small home owner."

One of the major discussions of the convention centred on construction during and after the war. Leading off on this subject, Mr. Walter G. Hunt, Montreal, observed that the construction industry did not want a war boom. It had been progressing favourably in the past few years, and he considered that it was "essential that material and labour prices should not be allowed to rise exhorbitantly but should be held within reason." He declared that there should be no profiteering in the industry.

He recommended that some action be taken "to counteract prejudiced opinion that was developing in the mind of the general public" as reflected in letters appearing in the press. Declaring such assertions to be untrue, Mr. Hunt advocated that "the lump sum and cost plus methods" in contracts as being the fairest for all parties concerned.

The activities of the Association during 1939 were reported by its manager, Mr. J. Clark Reilly, who reviewed developments in an eventful year as well as the organization's relations with the government.

Other topics of discussion included "Credits and Trust Fund Legislation" (introduced by Mr. F. G. Rutley); and "Improved Co-operative Relations Between the General Con-

tractor and Separate Trade Contractors" (introduced by Mr. John Parkin).

The officers elected for 1940-41 were as follows:—

Past president—C. D. Harrington, Anglin-Norcross Corp. Ltd., Montreal.

President—Cecil H. Gunn, John Gunn and Sons Ltd., Winnipeg.

Vice-president—John E. Clarke, Carter-Halls-Aldinger Co. Ltd., Toronto.

Eastern vice-president—Geo. Flood, John Flood and Sons Ltd., Saint John, N.B.

Mid-western vice-president—C. M. Miners, Saskatoon Construction Association, Saskatoon, Sask.

Western vice-president—Col. J. F. Keen, E. J. Ryan Contracting Co. Ltd., Vancouver, B.C.

Honorary secretary—R. A. Seasons, W. G. Edge Ltd., Ottawa, Ont.

Honorary treasurer—E. F. Longfellow, Canada Electric Co. Ltd., Toronto.

Chairman, Membership and Finance Committee—E. M. Seale, Canadian Tube and Steel Products Ltd., Montreal.

Chairman, Trade Contractors' Section—G. P. Wilbur, Dominion Bridge Co. Ltd., Toronto.

Chairman, Manufacturing and Supply Section—John W. Gooch, Canadian Metal Window and Steel Products Ltd., Toronto.

ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1939

THE Dominion Bureau of Statistics issued recently its Annual Review of Employment in the Dominion for 1939. The report deals with the situation in manufacturing, logging, mining, transportation, communications, construction and maintenance, services and trade, and also contains a brief section dealing with the subject of employment in banks, and other financial institutions.

The review points out that a number of events, both domestic and foreign, combined to make 1939 an unusual year in many respects. Among the adverse factors entering into the situation was a generally late spring that seriously retarded the commencement of seasonal operations during April and May, while another was the widespread uncertainty in business over a period of many months, due to the dangerous political situation in Europe. The impetus to business provided by the Royal Visit, and the harvesting of the largest wheat crop in eleven years were among the beneficial influences of domestic origin, while the revival of industrial activity in the United States also had a favourable reaction in the Dominion. Finally, the outbreak of hostilities in September was of first importance in its effect upon Canadian business. Responding to these various factors in different parts of the year, employment in 1939 showed fluctuations that in direction or extent were frequently at variance with those indicated as normal in the nineteen years of the employment record. At the 1939 minimum of industrial activity, recorded at April 1, the index was lower than at the same date in either 1938 or 1937; beginning with May 1, however, the movement was uninterruptedly favourable, the rate of improvement being accelerated as the year advanced, until at December 1, industrial employment was generally greater than in the same month in any other year of the record.

During 1939, 139,810 individual reports on employment were tabulated by the Employment Statistics Section of the Dominion Bureau of Statistics, a monthly average of 11,651. The employees of these establishments averaged 1,105,712, ranging from 1,015,632 at April 1 to 1,206,183 at November 1. In addition, data were received from many companies in the financial group; over 800 branches of financial institutions employed some 56,100 persons in 1939.

Based on the 1926 average as 100, the general index of employment in 1939 averaged 113·9, not quite two per cent higher than the 1938 average of 111·8; at January 1, 1939, the index was nearly five per cent lower than at the same date in the preceding year, while at November 1 and December 1, it was between seven and eight per cent higher than it had been in the last two months of 1938. The average for the year under review was fractionally lower than that of 114·1 in 1937, but was higher than in any other year of the record except 1929.

Employment Comparison Canada—United States

In a comparison of the course of employment in manufacturing in Canada and the United States, the review states that, on the whole, rather less fluctuation is shown in Canada than in the States. This is somewhat surprising in view of the fact that employment in manufacturing in the Dominion is generally more subject to seasonal variation than is the case in the United States. It is suggested that differences in the industrial distribution of the workers included in the surveys in the two countries largely contribute to this more advantageous position in the Dominion, where a larger proportion of the total workers belong to the non-durable groups of industries than is the

case in the United States. Non-durable groups ordinarily show less marked fluctuations than occur in the production of durable goods, which probably provide work for a greater proportion of the workers included in the American than in the Canadian surveys of employment.

The 1939 Annual points out that, in revised statistics recently issued by the United States Department of Labor, 1937 has displaced 1929 as the year of maximum industrial activity, the latter yielding the position in this respect that it has been accorded for a decade. In the Dominion, however, 1929 retains its general superiority over any other year of the record.

With regard to the situation on steam railways, it is remarked that from 1929 until 1933 there were successive and pronounced declines in the personnel of these utilities in both countries, while the recovery since then has been relatively slight. However, the level of employment on the Dominion railways has, since 1929, been higher than on the American lines.

Employment by Industries

The review devotes another section to a comparison of the varying levels of employment in recent years in the main industrial groups and in all industries in the Dominion, showing that since 1929 manufacturing and transportation have been almost uniformly at a lower level than general industrial employment, although the disparity in manufacturing has considerably diminished in the last four or five years, and at the end of 1939, the general and the manufacturing indexes were very similar. The course of employment in construction, governed to some extent by unemployment relief work in the years since 1931, has been erratic, the curve having in some years been considerably above, and in others considerably below, the general average. However, in the last three years some recovery has been indicated, with the result that the 1939 construction curve was quite close to that for all industries. On the other hand, the level of employment in mining, trade and services has for many years been considerably above that in other industries; the employment figures for these industries not only exert a stabilizing effect upon the general volume of employment, but also have an important influence in raising the all-industries curve to a position above that of the manufacturing, construction, transportation and communications industries.

In a comparison of the trends in the four great divisions of manufacturing—(pulp and paper, lumber, textiles, and iron and steel)—with those in manufacturing as a whole, it is pointed out that the factors making for intensified activity in 1939 operated with greater force upon the last three than upon the pulp and paper division, with the result that the movement in that group was not so steeply upward during the 1939 period of expansion as in the other three divisions. In comparison with the other major manufacturing industries, the textile trades appeared in a particularly favourable position, employment in recent months having reached an exceptionally high level. The improvement in iron and steel has recently also been pronounced, until at December 1, 1939, the employment index was slightly higher than in any preceding month since the early part of 1930.

In regard to transportation, it is stated that the level of employment in the western areas has been consistently higher than in the remaining parts of the Dominion; in most provinces, this industry in the latter months of 1939 was more active than in the autumn and early winter of any other recent year. The staffs of trading establishments in all five economic areas have since 1933 shown successive increases, resulting during 1939 in the greatest volume of employment yet recorded. The review remarks that the level in trade has been highest in Quebec, where the increases in the total population have also exceeded those in other parts of Canada.

In a detailed analysis of the situation, the review points out that from the 1939 low point at April 1 until the maximum of employment at November 1, the uninterruptedly favourable movement resulted in an increase of 17·8 per cent in the index, an advance that in the years since 1920, was exceeded only by that reported in the same period of 1937. The November 1 index was the third highest figure in the nineteen years for which statistics are available, while that for December 1 was the highest yet recorded at that date. It is estimated that at December 1, 1939, the staffs of the co-operating employers included some 85,000 more workers than these establishments had employed at December 1, 1938.

Employment by Provinces and Cities

Employment in all provinces except in New Brunswick was generally brisker in the year reviewed than in 1938. In most other provinces the improvement in 1939 commenced after the lapse of a few months, during which the comparison with the same period of 1938 was unfavourable; also in most of the provinces the rate of expansion was accelerated towards the close of the year, the December 1 gain over the same date in 1938 considerably exceeding the average increase shown by the same province in the annual comparison.

The situation reported in Montreal, Quebec City, Toronto, Ottawa, Winnipeg and Vancouver was generally better in 1939 than in the preceding year, the gains in the indexes of

employment ranging from just under one per cent in Winnipeg, to 11·3 per cent in Quebec City; in each of these centres except Winnipeg, the increase exceeded the percentage advance reported in the Dominion as a whole. In Hamilton and Windsor, on the other hand, activity was generally lower than in 1938. An index calculated for these eight cities as a unit, showed an increase of two per cent over 1938, compared with that of 1·9 per cent in the general index for Canada. The cities' index was higher than in any other year since 1930, being two points above the 1937 figure, whereas the Dominion index was fractionally lower than that for 1937. The review goes on to state that employment generally in manufacturing, communications, trade, services and construction in the larger cities, in 1939 as in immediatly preceding years, did not reach a level equal to that in other parts of Canada. On the other hand, the cities' employment index for transportation in recent years has been above the Canada figure.

Industrial Analysis

In an analysis dealing with the various industries, the review points out that manufacturing showed uninterrupted expansion from the first of January to December 1, during which period the index increased by 17·2 per cent to an all-time maximum of 122·2 at the beginning of December. This advance compared favourably with the average gain of rather better than eight per cent, indicated from January 1 to December 1 in the experience of preceding years since 1920. In spite of this unusually pronounced expansion, the 1939 average index was only slightly above that for 1938; this was due to the relatively low level of activity prevailing in the first part of last year, when the monthly indexes from January to July were below those for the same date in 1938.

Among the non-manufacturing industries, substantial improvement was reported in logging in the last quarter of 1939, but owing to slackness in the earlier part of the year, the annual index of employment was below the 1938 average. In mining, employment showed nine monthly advances, and the situation was more favourable than in any other year of the record. Transportation, on the whole, reported a slight gain over 1938 and 1937; the increased movement of grain and other commodities brought about improvement during many months, until the level of employment at the end of the year was the highest indicated since 1931. Construction and maintenance afforded more employment in the first three quarters of 1939 than in the same part of 1938, after which the comparison was unfavourable. However, the index for the twelve months of 1939 was above that for the preceding year. Building and railway construction and maintenance showed slight improvement, and road construction was also more active, partly as a result of an increase in the unemployment relief projects undertaken during the year. In services and trade, employment was in greater volume than in any other year of the record.

UNEMPLOYMENT IN CANADA AS REPORTED BY TRADE UNIONS FOR THE YEAR 1939

THE Department of Labour receives monthly reports from local trade unions throughout the country, indicating their membership and the number of members unemployed on the last day of each month, a tabulation of this data furnishing a continuous gauge of the situation for organized workers during the year. Local unions reporting each month during 1939 averaged 1,943 with a membership average of 245,748 persons, 12·2 per cent of whom were on an average unemployed. This percentage for 1939 was the lowest on record since 1930 with the exception of the year 1937 when unemployment averaged 10·7 per cent.

There was some measure of revival in conditions for organized workers during 1939 from the previous year, the percentage of idleness for each month from the close of April onward being at a level below that of the corresponding month in 1938. Employment for the year reached its height in October when 9·0 per cent of the members reported were off work, which percentage was the smallest that has been recorded in any month since October, 1937. The percentage of 16·4 reflected in February, 1939, constituted the unemployment maximum for the year.

The manufacturing industries during the first quarter of the year showed some curtailment in activity from the same period in 1938, but more favourable conditions prevailed in the remaining months. In the iron and steel trades the situation was quieter in the first six months, but employment was more plentiful from then onward, particularly in the latter part of the year. The garment trades indicated substantial improvement during ten months of the year, the increases being especially marked in April, May and July, while in January and March some employment cessation was apparent. Varying conditions were noted in the pulp and paper industries during 1939, January, March, April and May

showing but slight curtailment in employment from the corresponding months in 1938, and August and September recessions on a somewhat larger scale. In June, however, noteworthy employment advancement was evident, and an upward movement of employment was reflected in the remaining months. The wood products division of the manufacturing industries registered substantial employment recovery from 1938 in all months except August and September. Building and construction activities were stimulated during 1939, January, February and April being the only months to record any slackening in employment, while of the gains in the other months those registered in the last quarter of the year were of quite generous proportions. The transportation industries likewise showed a higher level of activity, the first four months only indicating a less favourable situation, the steam railway division reflecting consistent gains from the close of April, while in navigation some lessening in the volume of activity was evident during a large part of the year, though tending to improve in the latter months. The coal mining industry was generally quieter during 1939 than in the previous year, though the variations month by month were not outstanding, October and December alone reflecting moderate gains in activity. Retail trade was quite active, the change in conditions from 1938 being so slight as to be almost negligible. Communication workers were afforded a somewhat better volume of employment in all months during 1939 with the exception of September, when compared with the corresponding months of 1938, while the drop in activity recorded in that month was quite small. The services division showed little variation in the employment level month by month when compared with 1938 conditions, several months showing rather slight increases in activity, and others recessions of little importance. The situation for lumber workers and loggers reflected a more favourable trend toward the close of the year, but for the most part slacker conditions prevailed. The fishing industry showed a greater prevalence of available employment during January, February, August, October and November, while in the other months losses were recorded, which in March and April were quite pronounced.

During January, 1939, there was a minor increase in the volume of work afforded local trade union members from the close of 1938, the manufacturing industries, particularly the iron and steel, and garment trades, being largely responsible for this better trend. In February there was a general lowering in activity, the majority of trades participating in this slightly less favourable employment movement noted from January. At the close of March a small gain from February conditions was apparent, the building and construction trades, and manufacturing industries reflecting an upward trend. This improvement continued throughout April, the manufacturing and transportation industries particularly, indicating heightened employment, though activity in practically all trades tended in a favourable direction. The period of diminishing unemployment which set in during March was maintained without interruption until the close of October, though the changes from month to month were small. In November there was a slight tendency toward retarded employment, due largely to the seasonal lull in building and construction activities, and in a smaller measure to losses in coal mining and in the transportation industries. However, the percentage of unemployment for November proved to be the lowest on record for the corresponding month in any year since 1929. Due partly to seasonal inactivity and in some measure to conditions consequent upon the holiday period when a number of firms take advantage of the usual quietness in business for inventory and stocktaking purposes, the December percentage of idleness showed a slight rise from November.

The International Labour Organization in 1939

The increasing gravity of the international outlook and the subsequent outbreak of war necessarily influenced the activity of the International Labour Organization during the year 1939, records the International Labour Office in a recent review of the activities from which the following is taken.

The Organization has adapted itself to events. It has shown that its tripartite character, uniting Governments, employers and workers for a common aim, is capable of facing social problems in a time of crisis as well as in normal times.

Thus, from the beginning of the year, it drew the practical conclusions from the condition of "near war" and the speeding up of re-armament which obtained in most countries, by renouncing attempting to secure the immediate realization of the 40-hour week. In June, at the International Labour Conference, Governments, employers and workers, under the menace of imminent hostilities, decided almost unanimously to postpone the consideration of the questions of the reduction of hours of work submitted to them, while reserving action on them for the future as a reform which will be of vital importance when excessive armament production has ceased and the world returns to a peace-time economy.

On the other hand, in dealing with the other items on its agenda, less affected by exceptional circumstances—road transport, contracts

of employment to indigenous workers, the protection of migrant workers, and technical and vocational education and apprenticeship—the Conference adopted no less than 4 draft Conventions and 6 Recommendations.

This session of the International Labour Conference was not only noteworthy because of this important contribution to the volume of international social legislation which has been created during the past 20 years. It also gave striking evidence of the loyalty of the States Members. Forty-six were represented, in spite of the political crisis. Some were countries which, like the United States, never belonged to the League of Nations, or which have either left the League or have given notice to do so but have remained Members of the International Labour Organization—like Brazil, Chile, Venezuela, Peru, and Hungary. During the general discussion on the Report of the Director, Mr. Winant, 60 speakers—Governments, employers and workers—from every Continent maintained energetically that the Organization must continue its services to the world whatever the circumstances.

It thus endorsed the principle already adopted unanimously by the Governing Body of the I.L.O. in February—that the International Labour Organization should continue its work, even in the ultimate event of war.

The Governing Body, moreover, did not stop at stating this principle, but also took various steps to ensure its practical application in the event of an armed conflict ensuing.

Therefore, when hostilities broke out at the beginning of September, the I.L.O., thanks to the wise provisions taken, was able to continue its activity despite the mobilization of part of its staff and other difficulties of all kinds. It is carrying on.

For the past 4 months, the I.L.O. has continued its work of endeavouring to meet the various and changing needs of its States Members. More than 40 of them, 20 of which are actually European, are taking no part in hostilities. In the case of those countries which are at peace and which have not had to take serious military measures, permanent labour problems present almost an ordinary aspect. Others, although neutral, owing to mobilization have to meet new and complex problems. As for the belligerents, they are faced with great economic and social problems the importance of which cannot be overestimated.

Such are: the redistribution of labour; hours of work and rest periods; the employment of women, young persons and children; the question of elderly workers; the adaptation of wages to the cost of living; the prevention of, and compensation for, accidents; industrial diseases; labour inspection; the increasing importance of social insurance; the guarantee of employment on demobilization; assistance for the families of mobilized men; new conditions of maritime and agricultural work; and the organization of collaboration between public authorities, employers and workers.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER TO DECEMBER, 1939

THE work of the offices of the Employment Service of Canada during the quarter October to December, 1939, was less in volume than during the corresponding quarter of 1938, as there was shown a decrease of 23 per cent both in vacancies offered and in placements effected. An analysis of the different industries showed fewer placements were registered in farming, construction and maintenance, services, and transportation, the bulk of the decline being shown in the first two groups. These decreases were offset, in part, by gains reported in logging, manufacturing, trade and mining, of which the largest were in logging and manufacturing. Provincially, New Brunswick and Ontario alone reported more vacancies and placements. Losses in all remaining provinces, however, more than offset these gains, the declines recorded throughout the West in farming and in Quebec and British Columbia in construction and maintenance being particularly outstanding.

From the chart which accompanies the article on the work of the Employment Service for the month of December it will be seen that the curves of vacancies and placements in relation to applications followed a downward course throughout October and November, the trend of the curves being less pronounced during the first half of October than during the succeeding periods, but in December a sharp recovery was noted, there being a rise of 10 points. At the close of the quarter, however, the levels reached were still considerably below those attained at the end of December a year ago. During the period October to December, 1939, there was a ratio of 46·4 vacancies and 44·5 placements for each 100 applications for employment, as compared with 54·2 vacancies and 52·6 placements during the corresponding periods of 1938.

The average number of positions offered daily during the quarter under review was 1,233, of applications registered 2,658, and of placements effected 1,184, in contrast with a daily average of 1,577 vacancies, 2,910 applications and 1,529 placements in regular and casual employment during the last quarter of 1938.

During the three months October to December, 1939, the offices reported that they had made 93,044 references of persons to positions

and had effected a total of 88,758 placements, of which 57,540 were in regular employment and 31,218 in casual work. Of the placements in regular employment 41,708 were of men and 15,832 of women, while casual work was found for 16,848 men and 14,370 women. Comparison with the corresponding quarter in 1938 showed that 116,201 placements were then made, of which 79,906 were in regular employment and 36,295 in casual work. Applications for employment during the period under review were received from 144,008 men and

55,339 women, a total of 199,347 in contrast with the registration of 221,113 persons during the last quarter of 1938. Employers notified the Service during October to December, 1939, of 92,463 vacancies, of which 59,107 were for men and 33,356 for women, as compared with 119,835 opportunities for work during the corresponding period of 1938.

A report in detail of the transactions of the Employment Service for the month of December, 1939, will be found elsewhere in this issue.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA, DECEMBER, 1939

THE accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on January 1 was 11,891, the employees on their pay-rolls numbering 1,135,400 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for December was 1,967, having an aggregate membership of 251,282 persons, 11·4 per cent of whom were without employment on January 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from 70 centres in which the Employment Service of Canada is situated, showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of January, 1940, as Reported by Employers

The records of the Dominion Bureau of Statistics show that there is invariably a contraction in industrial activity at the beginning of January, mainly due to curtailment of operations in the outdoor industries for the winter, together with the losses in employment resulting from the closing of establishments over the holidays and for inventories and repairs. There was the customary recession at the beginning of January, 1940, but this was less-than-normal in the experience of the last nineteen years, involving the release of some five per cent of the reported staffs, as compared with the average reduction of just under seven per cent between December 1 and January 1 in this period. The level of employment at the latest date was considerably higher than that indicated at January 1 in any other year of the record.

Statements for the month under review were furnished by 11,891 establishments, whose employees aggregated 1,135,400; as compared with 1,198,541 at December 1, 1939, this was a decline of 63,141 persons, or 5·3 per cent. Based on the 1926 average as 100, the crude index stood at 116·2, compared with 122·7 in the preceding month, and 108·1 at January 1, 1939. The previous high figures for that date were those of 113·4 in 1938, and 111·2 in 1930.

After correction for seasonal influences, the January 1, 1940, index was 120·7, compared with 119·8 at December 1, when the reduction in employment had also been below the average. The seasonally-corrected index at the latest date was higher than in any other month since September, 1929.

In accordance with the experience of other years of the record, there were general declines in employment at January 1, 1940, but the distribution of the losses among the various industries differed from that usually indicated. On the average the recession in manufacturing at the beginning of January in the period, 1921-1939, has accounted for some 56 per cent of the total reduction in the staffs of the employers furnishing returns, and that in the non-manufacturing divisions for the remaining 44 per cent. At the date under review, however, less than a third of the total decrease was reported by manufacturers, while rather better than 67 per cent took place in other industries.

The contraction in manufacturing as a whole was the smallest reported at January 1 in any year of the record; some 20,600 persons were released by the co-operating factories, a decline of 3·3 per cent, which compared favourably with the average January decrease of over seven per cent in the period, 1921-1939. There were considerable gains in tobacco factories at the date under review, but the trend in most other classes was downward. The largest reductions were in the food, lumber, textile, iron and steel and pulp and paper groups.

Among the non-manufacturing divisions, construction suffered the most pronounced losses, there being a decline of 30,294 persons, or 25 per cent in this group, a decrease which

considerably exceeded the average. Logging, transportation and mining also reported important contractions, and there was a falling-off in employment in communications. On the other hand, retail trade and hotels and restaurants showed unusually marked seasonal improvement.

Following are the unadjusted general indexes as at January 1 in the years since 1927, (1926=100): 1940, 116·2; 1939, 108·1; 1938, 113·4; 1937, 103·8; 1936, 99·1; 1935, 94·4; 1934, 88·6; 1933, 78·5; 1932, 91·6; 1931, 101·7; 1930, 111·2; 1929, 109·1 and 1928, 100·7.

For January 1, 1939, 11,210 employers had made returns showing that they had an aggregate staff of 1,041,042 men and women; as compared with 1,097,953 in the preceding month, this was a reduction of 56,911, or 5·2 per cent. The largest losses had then taken place in manufacturing and construction.

Employment in Financial Organizations

For some months, statistics of their employment have been collected from banks, trust companies and stock market operators. At the beginning of January, 415 firms and branches in these lines of business reported staffs aggregating 33,484 persons, compared with 33,408 in the preceding month. The addition of these figures to the returns furnished in the manufacturing, logging, mining, transportation, communications, construction, services and trade industries brings the total number of employees included in the December 1 survey of employment to 1,168,884 in 12,306 establishments, and slightly lowers the index of 116·2 in the industries above enumerated, to 116·1; when the employees of the co-operating financial organizations were added to the general figures for November 1, the index was lowered from 122·7 to 122·3. Comparable data for 1939 are not available.

Employment by Economic Areas

All provinces recorded seasonally reduced activity, the losses ranging from two per cent in New Brunswick to 11·3 per cent in British Columbia. Employment in four of the five economic areas was brisker than at the beginning of January of last year, the exception being British Columbia, where the latest index was fractionally lower. In Quebec and Ontario, the general level of employment was higher than in any other January of the record; in the Maritime and Prairie Provinces the favourable comparison goes back to 1931, while in British Columbia the index was very slightly lower than at January 1 of 1939 and 1938, but was otherwise the highest since 1930.

Maritime Provinces.—Most of the contraction in employment in the Maritime Provinces at January 1, 1940, occurred in construction, but manufacturing, logging, mining, communications and trade were also slacker. Within the manufacturing division, iron and steel, food, lumber, clay, glass and stone and electric light and power plants showed the greatest declines, while there was improvement in textile factories. Heightened activity was also indicated by the track maintenance departments of the railways and in all branches of transportation, the gains in the latter being due to the reopening of the winter ports. There were losses in employment in Prince Edward Island, Nova Scotia and New Brunswick, those in Nova Scotia being largest.

Statements were received from 830 establishments in the Maritime area, employing 88,031 persons, compared with 91,099 at the beginning of December. While the general recession at January 1, 1940, was seasonal in character, it exceeded the average recorded at that date in the period, 1921-1939, and was also greater than the decrease in employment

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS,

(AVERAGE CALENDAR YEAR 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Jan. 1, 1927	95·9	101·8	93·6	96·8	99·9	87·7
Jan. 1, 1928	100·7	97·1	99·6	101·9	107·5	91·4
Jan. 1, 1929	109·1	103·3	103·3	113·8	116·6	100·4
Jan. 1, 1930	111·2	113·6	107·4	116·1	111·0	99·1
Jan. 1, 1931	101·7	119·3	99·3	100·1	106·4	94·1
Jan. 1, 1932	91·6	111·1	86·3	93·8	92·8	80·6

[1] For explanation of term "Relative Weight", see footnote to Table I.

noted at the beginning of January of last year. The index then, however, was nearly ten points lower than at the latest date, when it was higher than in any other January of the record except that in 1931.

A total of 805 employers had furnished data for January 1, 1939, showing payrolls aggregating 80,157 workers, compared with 80,619 in the preceding month.

Quebec.—The curtailment in Quebec at the beginning of January was less than average in the experience of the years since 1920, although it exceeded that indicated at January 1, 1939. The index, at 120·7 at the latest date, was, however, 5·8 points higher than at the beginning of 1939; it was also higher than in any other January for which statistics are available, being slightly above the previous maxi-

mum of 119·7 at January 1, 1938. Manufacturing (notably in textile, lumber, leather, pulp and paper and food plants), logging, transportation and construction reported the most pronounced losses, while the tendency was also downward in mining and communications; on the other hand, seasonal improvement took place in hotels and restaurants and retail trade. In many cases, operations will have been resumed early in the New Year in the establishments closed over the holiday season and for purposes of inventory. The labour forces of the 2,957 co-operating firms aggregated 345,228 workers, as against 372,544 at December 1, 1939.

For January 1, 1939, 2,815 employers had reported a staff of 325,598 men and women, compared with 344,908 in the preceding month; the index then stood at 114·9.

Ontario.—Manufacturing in Ontario showed seasonal declines, to which most industries contributed; the exception was the tobacco group, in which important gains (also seasonal in character) were recorded. The most pronounced reductions were in textile, food, pulp and paper, iron and steel, lumber, rubber and leather factories. In the non-manufacturing industries, there were large contractions in mining, transportation and construction, while logging and retail trade showed further improvement. A combined staff of 481,260 persons was employed by the 5,200 firms whose returns were received, and who had 495,743 employees at December 1. This decrease of 14,483 persons, or 2·9 per cent was, with one exception, the smallest recorded at January 1 in the years since 1920, being also decidedly less than that indicated at the same date of last year; the average loss at January 1 in the period, 1921-39, was between six and seven per cent. The index, at 120·9 at the latest date, was eleven per cent higher than that of 108·8 at January 1, 1939; it was also higher than at the beginning of January in any other year of the record. The establishments furnishing data for January 1, 1939, had numbered

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

4,875 and their employees, 426,576, as compared with 448,885 in the preceding month.

Prairie Provinces.—Shrinkage on a smaller scale than at the opening of 1939 was noted in the Prairie Provinces at Janury 1, 1940, when statistics were tabulated from 1,698 employers of 134,934 workers, or 7,321 fewer than at December 1. This shrinkage was also below the average in the experience of the last nineteen years. The index at the date under review stood at 103·3, as compared with 97·1 at January 1, 1939. Manufacturing, transportation and construction reported the most marked reductions at the beginning of January, 1940, but the trend was also downward in mining, communications and services. In the manufacturing division, the largest losses were in food, clay, glass and stone, textile and iron and steel plants. On the other hand, employment increased in logging and retail trade.

For January 1, 1939, 1,594 firms had reported an aggregate working force of 124,563, which was smaller by 8,193, or 6·2 per cent, than in the preceding month.

British Columbia.—The recession in British Columbia involved more workers than that indicated at the beginning of January of last year, and also exceeded the average decline at January 1 in the period, 1921-1939. The 1,206 establishments furnishing data reported 85,947 employees at the date under review, as against 96,900 at December 1, 1939. Lumber, food and iron and steel factories, logging, mining, construction and transportation recorded curtailment. The losses in the lumbering industries were especially pronounced, partly owing to unfavourable weather conditions and partly owing to the closing of camps over the holiday week-end. On the other hand, services and retail trade showed improvement. Employment on the whole was a little quieter than at January 1, 1939, when the 1,121 cooperating firms and branches had employed 84,147 men and women; the index then stood at 98·0, compared with 97·6 at the opening of 1940.

Index numbers of employment by economic areas are given in Table 1.

Employment by Cities

There were contractions in six of the eight cities for which separate tabulations are made, firms in Montreal, Quebec City, Toronto, Hamilton, Winnipeg and Vancouver reporting reduced employment, while there was a small increase in Ottawa and Windsor. In Montreal, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver, employment was brisker than at January 1, 1939. In Montreal and Vancouver, the indexes were slightly higher than in any other January of the record; in Toronto, Ottawa, Hamilton and Winnipeg, the favourable comparison goes back for eight or nine years, while in Quebec City and Windsor employment was more active than at January 1 in most other years of the record.

Montreal.—The recession in Montreal involved a much smaller number of workers than that indicated at January 1 in any other year of the record except 1935. Statements were received from 1,725 establishments with 167,684 employees, as compared with 175,114 at December 1, 1939. Curtailment was shown in manufacturing, in which the losses in food, textile and leather plants were largest. Transportation and construction were also slacker. On the other hand, employment in retail trade was in greater volume. The index, at 108·0, was 7·6 points higher than at the beginning of January in 1939, when 1,628 firms had reported payrolls aggregating 154,710 persons, compared with 163,750 in the preceding month.

Quebec.—Manufacturing, services and trade showed moderate gains, but transportation and construction released employees. The 210 cooperating employers in Quebec City reduced their staffs from 15,388 at December 1 to 14,999 at the beginning of January. This decline was rather smaller than the average recorded at January 1 in preceding years for which data are available. At that date in 1939, however, the trend had been upward, and employment was then at a higher level, according to the 202 establishments making returns, which had employed 16,598 men and women.

Toronto.—Toronto firms showed a decidedly smaller seasonal reduction in personnel at January 1, 1940, than at the same date in almost any other year of the record. The index, at 116·6, was over nine points higher than at January 1, 1939, when it stood at 107·3; it was also higher than in any other January for which data are available, except that of 1930. As compared with December 1, 1939, there were losses in manufacturing, the most noteworthy being in the textile, food and pulp and paper groups; construction and transportation were also quieter, while there was pronounced, seasonal improvement in retail stores. Returns were tabulated from 1,768 employers of 150,019 workers at January 1, compared with 151,422 in the preceding month; at the beginning of January of last year, 1,648 firms had reported 135,660 persons on their pay-rolls.

Ottawa.—A slight advance on the whole was indicated in Ottawa; manufacturing showed a recession and building was also slacker, but road work and retail trade were more active. The result was a small increase in general employment in the city, according to the 228 reporting establishments, whose staffs included

14,838 men and women, as compared with 14,817 in the preceding month. A reduction had been recorded at the same date of last year, when the index of employment was over five points lower. Statements had then been furnished by 215 employers with a personnel of 14,028.

Hamilton.—Data were received from 332 firms in Hamilton employing 37,248 workers, as against 37,826 in the preceding month. Manufacturing showed most of the curtailment, which took place chiefly in textile, non-ferrous metal and food factories; on the other hand, iron and steel works were more active. Trade recorded some seasonal improvement, but transportation was quieter. At January 1, 1939, the 310 co-operating establishments had reported 31,489 employees, and the index was more than sixteen points lower.

Windsor.—There was a slight gain at the beginning of January in the number employed in Windsor; the increase was mainly in manufacturing, notably in the textile and iron and steel industries. Trade was also rather brisker. On the other hand, construction and transportation released some workers. Returns were compiled from 194 firms with 20,693 persons in their employ, as compared with 20,457 in the preceding month. Activity was slightly lower than at January 1, 1939, when the trend had also been upward, according to information from 191 businessmen, whose payrolls had included 20,639 men and women.

Winnipeg.—Employment in manufacturing and construction declined in Winnipeg, while other groups, on the whole, showed only slight changes; within the former, the losses in food, textile and printing and publishing factories were largest. The 530 co-operating establishments reported 42,685 employees, compared with 43,916 in the preceding month. This contraction involved fewer workers than have been laid off, on the average, at January 1 in preceding years of the record, being also less than that indicated at the same date in 1939. The index then was several points lower. Statistics for the beginning of January of last year had been tabulated from 503 employers of 39,070 persons.

Vancouver.—Reduced activity was indicated in Vancouver, according to returns from 521 firms employing a staff of 37,173 persons, as compared with 38,081 at December 1. The decrease noted at the same date of last year had been larger, and the index then was 4·2 points lower. There were losses in manufacturing at the date under review, notably in the food, lumber and iron and steel divisions, and building and transportation were also slacker than in the preceding month; on the other hand, trade and services showed improvement. For January 1, 1939, 472 establishments had reported 34,808 men and women on their pay-lists, compared with 36,055 in the preceding month.

Employment by Industries

Manufacturing.—As already stated, the decline in employment in manufacturing at January 1, 1940, was the smallest reported at that date in any of the years since 1920, there being a loss of 3·3 per cent, as compared with December 1, while the average reduction in this comparison since 1920 has been over seven per cent The contraction at the date under review, as in January of other years, was partly due to comparatively brief shut-downs for inventory and over the holiday season. In each of the preceding years for which data are now available, employment has shown partial recovery in the weeks succeeding January 1; on the average, this has amounted, up to the date of the next report (February 1) to rather less than 50 per cent of the shrinkage indicated at the opening of the year.

The manufacturers making returns for January 1, 1940, numbered 6,468, and their staffs aggregated 606,636, compared with 627,252 at December 1. The index declined from 122·2 in the preceding month, to 118·2 at the date under review. As compared with 104·3 at January 1, 1939, there was an increase of 13·3 per cent, while the latest index was 8·8 per cent higher than at the same date in 1938, the previous maximum for January 1 in the years since 1920.

After correction for seasonal influences, the index for January 1, 1940, was 126·1, the highest figure recorded in any month for which statistics are available.

The most extensive reductions at the date under review were in food, lumber, textile, iron and steel and pulp and paper factories, but the fur, leather, rubber, chemical, clay, glass and stone, electric light and power, non-ferrous metal and miscellaneous manufacturing industries also recorded important curtailment. On the other hand, tobacco works showed marked improvement, as has often been the case at the beginning of January; beverage and electrical apparatus plants also reported somewhat greater activity.

The index numbers of factory employment at the first of January in the years since 1927 are as follows:—1940, 118·2; 1939, 104·3; 1938, 108·6; 1937, 102·4; 1936, 96·8; 1935, 87·4; 1934, 80·0; 1933, 74·4; 1932, 83·9; 1931, 93·7; 1930, 106·5; 1929, 107·3 and 1928, 97·9.

The 6,215 manufacturers making returns for the same date in 1939 had reported a personnel

of 532,012, a decline of 29,537 workers, or 5·3 per cent, from the preceding month.

Animal Products, Edible.—Declines were noted in meat-packing and fish-preserving plants, while dairies showed no general change. Statements were received from 305 manufacturers with 25,711 workers, as compared with 27,975 at the beginning of December. This loss was larger than that recorded at January 1, 1939, when the index number was slightly lower. All five economic areas reported lessened employment at the date under review, the greatest contractions being in British Columbia.

Leather Products.—There was a seasonal falling-off in the leather industries at the beginning of January. The shrinkage involved much the same number of employees as that indicated at the corresponding date of last year, but the index then was over twenty points lower. A combined working force of 24,942 persons was registered by the 336 firms making returns, as compared with 25,938 in the preceding month. Most of the loss occurred in Quebec and Ontario.

Lumber Products.—Seasonal curtailment was noted in lumber mills, 949 of which reduced their pay-rolls from 45,716 employees at December 1 to 41,920 at the beginning of January. Employment was in greater volume than at the same date of last year, although the recession then indicated had been on a smaller scale. Sawmills showed the most pronounced decreases, but there were also contractions in container, furniture, vehicle and other wood-using industries. The largest falling-off was in British Columbia, but the general tendency was downward.

Musical Instruments.—Thirty-six manufacturers of musical instruments reported a combined staff of 1,537, which was 66 less than in the preceding month. A loss had also been noted at January 1 a year ago, when the index number was lower.

Plant Products, Edible.—There were important seasonal reductions in employment in most branches of the vegetable food group, bakery, chocolate and confectionery factories. the largest being in canning, sugar and syrup, The working forces of the 540 co-operating employers totalled 35,387 persons, as compared with 42,245 in their last report. While the movement was generally unfavourable, the most pronounced contractions were in Ontario. The declines at the beginning of January last year were not so etxensive, but the index number then was many points lower than at the date under review.

Pulp and Paper Products.—The shrinkage at the beginning of January, 1940, was on a much smaller scale than that indicated at the same date in 1939, when employment was in less volume. Statistics were received from 708 firms, whose staffs aggregated 68,360 workers, or 1,789 fewer than in the preceding month. There were considerable losses in Ontario. Pulp and paper mills reported reductions, and there were also declines in plants producing paper goods and in printing and publishing houses.

Rubber Products.—Rubber factories showed a decrease which exceeded that noted at January 1, 1939; 52 plants had 13,718 employees at the date under review, as against 14,494 at the beginning of December. Most of the recession took place in Ontario. The index number, at 109·8, was several points above that of 102·4 at the same date of last year.

Textile Products.—The 1,169 textile firms furnishing data released a smaller proportion of their total operatives than was the case among the establishments making returns at the beginning of January, 1939, when the index was many points lower than that of 132·0 at the date under review. The reported pay-rolls included 114,906 persons at January 1, 1940, as against 118,089 in the preceding month. Quebec and Ontario recorded the bulk of the shrinkage, which was especially marked in the hosiery and knit goods and garment and personal furnishing divisions.

Tobacco.—There was a large seasonal increase in employment at the beginning of January in the tobacco group. Statements were tabulated from 45 manufacturers, employing 12,443 workers, or 4,153 more than at December 1. The advance took place in Quebec and Ontario, mainly in the latter.

Beverages.—Slight improvement was indicated in beverage manufacturing at January 1, when 149 establishments reported 9,483 employees, compared with 9,421 in their last return. An advance was noted in these industries as compared with January, 1939.

Chemical Products.—Employment in chemical and allied products showed a falling-off at January 1 from the preceding month, 351 persons having been let out from the labour forces of the 321 co-operating plants, which had 20,830 workers. Larger declines had been reported at the corresponding date a year ago, and the index number was then much lower.

Clay, Glass and Stone Products.—Further seasonal recessions in employment occurred in the production of these goods; 220 firms reported an aggregate staff of 9,856, as compared with 10,663 in the preceding month. All provinces shared in the curtailment, which,

however, was most marked in Ontario. Brick and stone yards recorded important losses; on the whole, these were on a much smaller scale than those of January 1, 1939, when activity generally was at a lower level.

Electric Light and Power.—Employment in electric light and power plants again declined, according to statistics from 102 producers, employing 17,068 workers, or 672 fewer than at December 1. Quebec firms reported the greatest contraction. A smaller reduction had been noted at the beginning of January of last year, but the index was then nearly seven points lower.

Electrical Apparatus.—A slight gain in industrial activity was indicated by the 125 cooperating electrical apparatus factories, whose labour forces aggregated 19,075 at January 1, as compared with 19,020 in the preceding month. Employment was much brisker than at the same date of 1939, when a falling-off had been recorded.

Iron and Steel Products.—The crude, rolled and forged, machinery, heating appliance, steel ship building, wire and certain other divisions reported curtailment, while additions were made to the personnel of railway car, locomotive and other vehicle plants. The largest losses were in Ontario. The staffs of the 927 firms furnishing data in the iron and steel industry totalled 143,964, against 146,171 at December 1. The decline, seasonal in character, was decidedly smaller than that recorded at the same date in most other years since 1920, while the index was higher than at the opening of any other year for which statistics are available, except 1929.

Non-Ferrous Metal Products.—The decrease in non-ferrous metal products involved the release of fewer workers than that indicated at January 1, 1939, when employment was in less volume. Returns for the date under review were compiled from 193 employers of 26,207 persons, as against 26,631 at the commencement of December. Most of the reduction took place in Ontario. An analysis of the data by industries shows a slackening in the precious and the base metal groups.

Mineral Products.—Lowered activity was noted in these industries, in which a similar shrinkage had been reported at the beginning of last year. A combined working force of 13,021 men and women was employed by the 98 establishments whose returns were received, and which had 13,208 employees at December 1. The index was substantially higher than at January 1, 1939, standing at 163·4 at the latest date, as against 150·0 in the same month of last year.

Logging

Bush operations on the whole showed a considerable falling-off at January 1. In the years since 1920 there has customarily been an exodus from logging camps over the holiday season, but the general movement in the present year was more pronounced than usual, partly owing to unsatisfactory weather conditions in British Columbia. Improvement was shown in Nova Scotia, Ontario and the Prairie Provinces, while elsewhere reductions in staff were indicated, of which those in Quebec and British Columbia were largest. Employment was in greater volume than in January of 1939, but was quieter than at that date in 1938. The index stood at 237·8, compared with 263·6 at December 1, 1939, and 150·6 at January 1, 1939. An aggregate pay-list of 69,983 men was reported by the 431 cooperating firms, who had 77,585 employees in the preceding month.

Mining

Coal.—Curtailment was indicated in coal mines, 102 of which reduced their staffs from 26,298 at December 1, to 25,747 at the beginning of January. There were small gains in New Brunswick and Saskatchewan, but the tendency was downward in Nova Scotia, Alberta and British Columbia. The index number at January 1, 1939, was slightly higher, employment then having shown a moderate advance from the preceding month.

Metallic Ores.—A pronounced decrease was noted in metallic ore mines, according to data from 210 mines employing 42,647 persons at the beginning of January, as compared with 44,145 in their last report. The index was decidedly higher than at the same date of last year, although a smaller recession had then been indicated.

Non-Metallic Minerals (Other than Coal).—The trend of employment in this division continued seasonally downward; the reductions were on a larger scale than at January 1 a year ago, but the index was then slightly lower. Statements were received from 101 employers with 8,255 workers, as compared with 9,289 in the preceding month. There were general losses, those in Quebec and Ontario being greatest.

Communications

A further decrease took place on telephones and telegraphs; the index was slightly higher than at the same date in 1939, when a rather smaller falling-off had been noted. The payrolls of the companies and branches furnishing data declined from 22,833 at December 1, 1939, to 22,522 at the beginning of January, 1940.

Transportation

Street Railways and Cartage.—Local transportation firms reported a seasonal contraction in personnel, involving many more workers than that noted at January 1, 1939; the index then, however, was lower by nearly eight points. A combined staff of 29,579 persons was employed by the 302 co-operating firms, who had 31,140 workers in the preceding month. The largest reductions were in Saskatchewan.

Steam Railways.—Employment in steam railway operation showed a decided decline, marked seasonal improvement in the Maritime Provinces being more than off-set by contractions in the other areas. The forces of the 101 companies and divisional superintendents furnishing returns included 60,495 persons, as against 61,451 in their last report. A smaller loss had been recorded at the same date last year, when the index was, however, nearly five points lower than that of 75·8 at January 1, 1940.

Shipping and Stevedoring.—On the whole, there was a large, seasonal decrease in employment in water transportation; curtailment was indicated in Quebec, Ontario and British Columbia, while an important increase, also seasonal in character, was noted in the Maritime Provinces. The general reduction was not equal to that indicated at January 1, 1939, but the index was then fractionally higher. Returns for the date under review were compiled from 124 employers of 12,447 men, compared with 16,338 in the preceding month.

Construction and Maintenance

Building.—Continued, seasonal curtailment of operations was shown in building construction; 876 contractors reduced their staffs from 32,106 at the beginning of December to 23,788 at January 1. The most pronounced declines were in Quebec and Ontario, although there were general losses throughout the Dominion. A smaller falling-off had been indicated at January 1 of last year, but the index was then rather lower.

Highway.—Statements were received from 386 firms employing 39,045 workers, or 21,564 fewer than at December 1. Important curtailment took place in all five economic areas. Road construction generally afforded much less employment than in the winter of 1938-39.

Railway.—A downward movement was shown in this division, in which 29 employers reported 20,409 persons on their pay-roll, as compared with 20,821 in the preceding month. The index was fractionally higher than at January 1 of a year ago, when improvement had been noted. There were increases in employment in the Maritime Provinces and British Columbia at the date under review, while in Ontario and the Prairies contractions were recorded.

Services

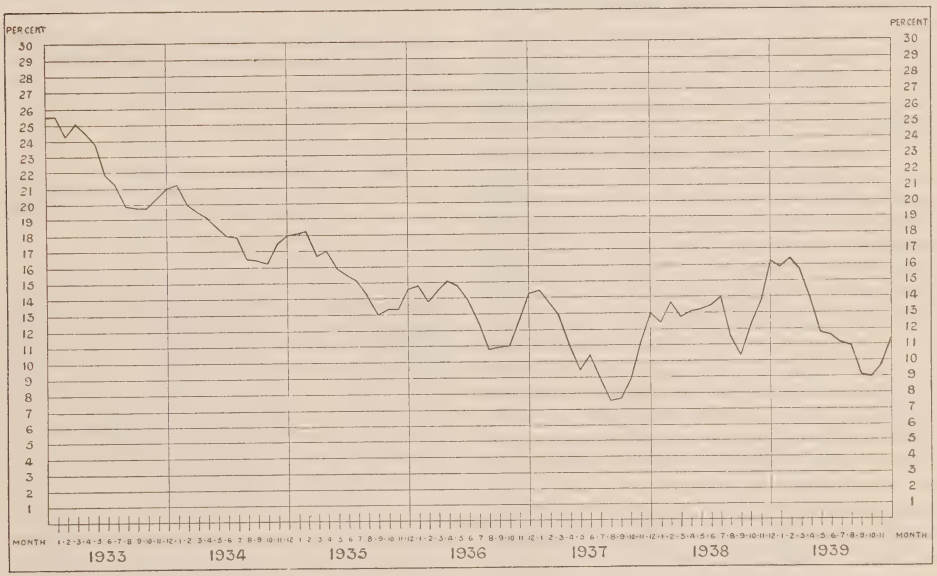
A slight gain was reported in services, in which 593 firms employed 29,564 men and women, compared with 29,402 in the preceding month. There was an increase in the personnel of hotels and restaurants, while laundries and dry-cleaning establishments were slacker. A smaller advance had been shown at the beginning of January, 1939, when the index was two points lower.

Trade

Trade afforded considerably more employment than at December 1; the increase in sales force, on the whole, greatly exceeded the average gain indicated at the beginning of January in the preceding years for which statistics are available. There were moderate seasonal losses in wholesale houses, but the additions to staffs in retail stores were exceptionally large. The 2,082 co-operating establishments had 144,283 employees, compared with 139,272 in their last report. The index stood at 149·9 as compared with 144·7 in the preceding month, and 144·8 at January 1, 1939.

Tables

The accompanying tables give index numbers of employment by economic areas, and industries. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns at the date indicated.



(2) Unemployment in Trade Unions at the Close of December, 1939

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work in other than their own trades or who are idle due to illness are not considered as unemployed while unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Further declines in the volume of work afforded, though on a small scale, were evident among local trade union members at the close of December, seasonal quietness together with

the curtailment in activity consequent upon the holiday period, having an adverse effect upon the situation at the end of the month. This was apparent from the reports forwarded by 1,967 labour organizations with a total of 251,282 members, 28,555 or 11·4 per cent of whom were out of work at the end of the month in contrast with a percentage of 9·7 in November. Conditions were considerably improved from December, 1938, when 16·2 per cent of the members reported were unemployed, and a higher level of activity was maintained during December, 1939, than in the corresponding month of any year since 1929, the unemployment percentage of 11·4 reported for the month under review being identical with that of December, 1929. There was a general lowering in the volume of work afforded in all provinces when compared with November though the variations were not pronounced, British Columbia unions with a 3·1 per cent drop in employment showing the greatest change. In this province the fishing and manufacturing industries, particularly the iron and steel trades in the latter, were mainly responsible for the less favourable movement noted from November. Employment losses of 2·4 per cent were recorded in Ontario when compared with November, seasonal dullness in building and construction activities and in the steam railway division of the transportation industries being determining factors in the downward employment trend. Minor recessions in available work were manifest by Quebec and Manitoba members, and the situation in Nova Scotia, New Brunswick, Saskatchewan and Alberta declined by less than 1 per cent. In making a comparison with the returns for December, 1938, an encouraging feature was the improvement noted in every province during the month under review. Manitoba unions reflected gains of over 9 per cent from December a year ago, which were most predominant in the manufacturing industries, and in New Brunswick and Quebec employment advances of over 5 per cent were apparent, a large number of trades and industries contributing to the expansion in these provinces. Ontario, Alberta and British Columbia unions recorded increases in activity of over 4 per cent, and Nova Scotia and Saskatchewan gains of lesser importance.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The records of unemployment affecting local trade union members in the largest city in each province, with the exception of Prince Edward Island, are compiled separately each month. Of these, Vancouver, Toronto and Montreal unions during December reflected contractions in activity on a moderate scale from November, and conditions were but nominally adverse in Edmonton, Regina, Winnipeg and Saint John. Halifax unions alone, showed a tendency toward greater employment though the variation from November was but fractional. A decidedly better volume of work was afforded Winnipeg members during December than in the corresponding month of 1938, and improvement of more

moderate proportions was manifest in Vancouver, Toronto, Montreal and Regina. Activity also tended upward for Edmonton, Saint John and Halifax members.

The chart which accompanies this article illustrates the trend of unemployment by months from January, 1933, to date. The curve of unemployment in January, 1939, showed but little variation in level from the close of 1938, the projection, however, tending in a downward direction, an evidence of a nominally improved situation. In February the volume of unemployment, as represented by the curve, showed a slight rise. From the close of February the curve followed a consistently downward course month by month until the end of October, reflecting continued gains in work afforded, the cumulative advancement recorded during these eight months being over 7 per cent. The maximum of activity for the year was reached at the close of October when unemployment stood at 9·0 per cent, the lowest percentage of idleness to be recorded in any month since October, 1937. In November, largely due to seasonal influence, the trend of employment was somewhat less favourable than in October, but the November situation proved to be the best that has been reflected in the corresponding month of any year since 1929. A continuation in the upward tendency of the curve shown in November was manifest throughout December indicative of further employment cessation. The peak of inactivity for the year 1939 occurred in February when 16·4 per cent of the members reported were without work. During the first four months in 1939 the situation as shown by the curve was less favourable than in the corresponding months of 1938 but during the remaining eight months of the year a better volume of employment was accorded.

Activity in the manufacturing industries during December, 1939, remained substantially unchanged from the preceding month, 10·0 per cent of idleness being recorded, as compared with a percentage of 9·9 in November. Reporting for December were 592 organizations of persons engaged in manufacturing pursuits with 97,729 members, 9,800 of whom were unemployed on the last day of the month. A considerably better level of employment prevailed, however, than in December a year ago when 16·6 per cent of idleness was recorded. Iron and steel workers registered heightened activity on a rather small scale during December from the previous month, and the situation tended upward for glass, gas, textile and carpet, and brewery workers, printing tradesmen and meat cutters and butchers. A large percentage increase in activity was manifest by electric current employees during December but as their membership was small they scarcely affected the percentage in the manufacturing industries as a whole. Of the contractions in employment in the remaining trades which were just more than sufficient to offset these gains, the most outstanding, viewed from a percentage basis, were reported by fur and rubber workers who together formed but a small share of the total membership indicated in the manufacturing industries. Noteworthy employment recessions were evident also, among general labourers and hat, cap and glove workers, and lesser declines occurred among metal polishers, leather, and cigar and tobacco, and wood workers. Activity for bakers and confectioners, paper makers and garment workers was but fractionally retarded from November. Contrasted with the returns for December, 1938, wood, garment, textile and carpet, hat, cap and glove, and glass workers, meat

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1929.....	4·0	1·6	7·7	4·3	7·1	5·3	6·4	5·9	**5·7**
Average 1930.....	5·4	3·7	14·0	10·4	9·6	10·6	13·3	11·6	**11·1**

cutters and butchers and electric current employees all were decidedly better engaged during the month reviewed, and pronounced expansion was apparent in the iron and steel group. Gains of smaller proportions though still rather noteworthy were evident among bakers and confectioners, paper makers, jewellery workers, and general labourers. Brewery, and cigar and tobacco workers, metal polishers, and mill and smeltermen indicated a slightly more favourable employment movement. Large increases in slackness, on the other hand, were apparent among leather, fur and rubber workers, while gas workers and printing tradesmen suffered losses in employment on a much smaller scale.

The 59 unions of coal miners from which reports were tabulated at the close of December, 1939, comprising a membership of 22,226 persons showed that 602 or a percentage of 2·7 were out of work, as compared with 3·8 per cent of idleness in November. British Columbia members were afforded a considerably greater volume of work than in November, and in Alberta some improvement in the situation was evident. Employment for Nova Scotia miners, however, eased off slightly from November. In comparing with the returns for December, 1938, when 6·1 per cent of inactivity was registered in coal mining as a whole, British Columbia members were decidedly busier during the month reviewed, and in Nova Scotia and Alberta lesser gains occurred. New Brunswick miners reported a fully engaged situation in all three months used for comparative purposes.

The usual mid-season dullness in building and construction activities, was evident during December, the 217 labour organizations reporting an aggregate membership of 26,783 persons indicating that 8,106 or a percentage of 30·3 were idle at the close of the month contrasted with 25·0 per cent of inactivity in November. Bricklayers, masons and plasterers reflected much quieter conditions than in November as did also hod carriers and building labourers, and pronounced curtailment was evident among carpenters and joiners and steam shovelmen. A considerable falling off in available work was recorded by painters, decorators and paperhangers, and activity for electrical workers subsided slightly. Employment expansion on a large scale, however, was evident among granite and stonecutters, and tile layers, lathers and roofers, and the situation was somewhat improved among bridge and structural iron workers and plumbers and steamfitters. A much higher level of activity was apparent in the building and construction trades during December, 1939, than in the corresponding month of the previous year when unemployment stood at 41·2 per cent. In this comparison substantial employment recovery was manifest by carpenters and joiners, plumbers and steamfitters, tile layers, lathers and roofers, and bridge and structural iron workers. Bricklayers, masons and plasterers, and painters, decorators and paperhangers also showed important gains in work afforded, and moderate advancement was apparent among electrical workers. Employment among hod carriers and building labourers, on the other hand, was much more reduced than in December, 1938, and fairly substantial losses were also indicated by steam shovelmen. Curtailment in activity on a small scale was evident among granite and stonecutters.

The transportation industries during December showed some slowing up in employment from November according to the reports compiled from 829 local unions representing a total of 68,813 members. Of these, 6,907 or a percentage of 10·0 were unemployed on the last day of the month in comparison with 6·9 per cent of inactivity in November. In the steam railway division, which constituted over 80 per cent of the entire group membership reporting, conditions were somewhat less favourable than in November, the closing of navigation on the Great Lakes affecting the situation, particularly among steamship clerks. Teamsters and chauffeurs showed a noteworthy drop in work afforded, Quebec unions especially reflecting quietness, the closing of the Montreal port greatly diminishing employment for these workers. Activity in the navigation division was also moderately retarded. Street and electric railway employees, however, indicated all their members at work in contrast with a fractional unemployment percentage in November. The transportation industries, as a whole, afforded a greater volume of work in December than in the corresponding month of 1938 when 12·5 per cent of the members reported were idle. In this comparison navigation workers indicated decided employment revival during the month reviewed, and the gains registered in the steam railway division, while not so large viewed from a percentage basis as those recorded in navigation, still affected a much greater number of members. The tendency for street and electric railway employees was but nominally upward from December, 1938. Teamsters and chauffeurs, on the contrary, registered marked increases in slackness.

From unions of retail shop clerks 6 reports were received for December, representing a membership of 1,872 persons, all of whom were fully engaged on the last day of the month, as in November, while at the close of December, 1938, only 0·2 per cent of idleness was reflected.

Activity for civic employees during December tended in a less favourable direction than in either the preceding month or December, 1938, the degree of change in each comparison being small. This was apparent from the 82 local unions reporting for December, with a total of 9,733 members, 413 or a percentage of 4·2 of whom were unemployed on the last day of the month, in comparison with percentages of 2·2 in November and 2·4 in December, 1938.

A fractionally upward employment movement only was manifest in the miscellaneous group of trades during December from the preceding month, but conditions improved considerably from December, 1938. Making returns for the month under review were 139 local unions with 10,172 members, 465 or 4·6 per cent of whom were unemployed at the end of the month, in contrast with a percentage of 5·5 in November and with 10·4 per cent of inactivity in December, 1938. Compared with the returns for November unclassified workers showed noteworthy employment advancement during the month surveyed, and nominal gains only were recorded by hotel and restaurant, and theatre and stage employees. Among stationary engineers and firemen, and barbers, employment subsided slightly. All groups of trades participated in the better movement noted from December, 1938, unclassified workers particularly being much busier during the month under review. Among barbers, hotel and restaurant, and theatre and stage employes expansion of moderate degree was indicated, and slight gains were apparent among stationary engineers and firemen.

Fishermen recorded important losses in employment during December from the preceding month, the percentage of idleness standing at 25·8 in comparison with 4·8 per cent in November. The percentage for the month under review was based on the returns compiled from 6 associations of these workers, with 2,619 members, 675 of whom were reported unemployed on the last day of the month. Less favourable conditions also prevailed than in December, 1938, when 19·4 per cent of inactivity was registered.

Among lumber workers and loggers there was some falling off in employment apparent during December from the November returns, but improvement in the situation in substantial measure was reflected from December, 1938. This was manifest by the reports tabulated from 6 unions of these workers with 2,408 members, 553 or 23·0 per cent of whom were idle on the last day of December, 1939, contrasted with unemployment percentages of 20·8 in November and 47·5 in December, 1938.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1929 to 1939 inclusive and also the percentages of unemployment for December of each year from 1929 to 1936 inclusive, and for each month from December, 1937, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for December, 1939

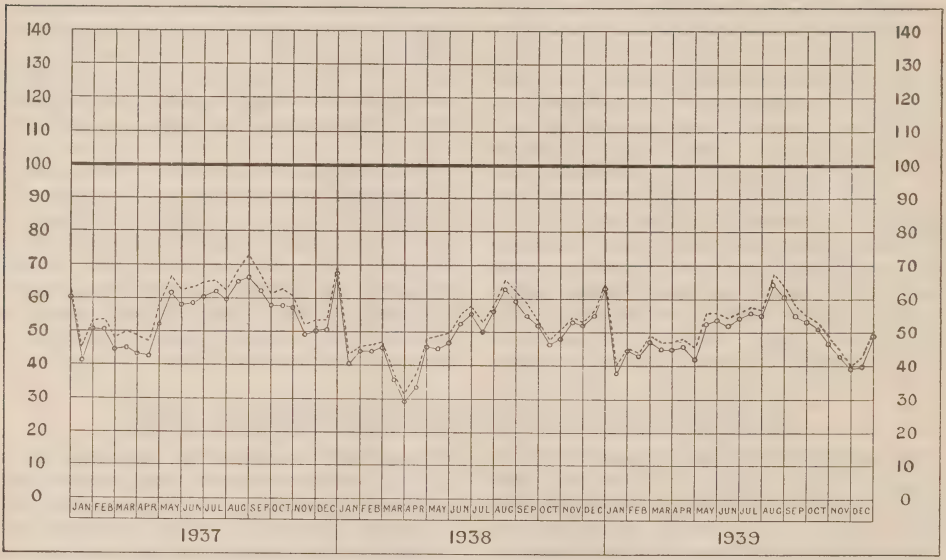
The records of the Employment Service of Canada for the month of December, 1939, when compared with those of November, 1939, and of December a year ago showed declines of 16 per cent and 34 per cent respectively in the average daily placements effected. Under the former comparison all groups showed decreased placements, the greatest losses occurring in construction and maintenance and logging, with others more moderate in services, farming, manufacturing and transportation, the declines in mining and trade being minor only. When compared with December, 1938, farming and construction and maintenance recorded very heavy declines, which were, for the most part, responsible for the net loss shown. A fairly substantial decrease was also recorded in services. Moderate gains, however, were reported in manufacturing and logging, changes in all other groups being small.

The accompanying chart shows the trend of employment since January, 1937, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications rose steadily throughout December, the upward trend being much more pronounced during the latter half of the month than during the earlier part, however, at the end of the period the levels reached were still about 14 points lower than those attained at the close of the corresponding month a year ago. The ratio of vacancies to each 100 applications was 42·5 and 50·2 during the first and the second half of December, 1939, in comparison with ratios of 56·7 and 64·3 during the corresponding periods of 1938. The ratios of placements to each 100 applications during the periods under review were 39·9 and 49·2 as compared with 55·0 and 63·2 during the corresponding month of 1938.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during December,

1939, was 1,016 as compared with 1,197 during the preceding month and with 1,501 in December a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,229, in comparison with 2,824 in November and with 2,499 in December, 1938.



The average number of placements made daily by the offices during December, 1939, was 972, of which 576 were in regular employment and 396 in work of one week's duration or less, as compared with a total daily average of 1,159 during the preceding month.

applications made, and 28,953 placements effected, while in December, 1938, there were recorded 39,006 vacancies, 64,972 applications for work and 38,070 placements in regular and casual employment.

During the year 1939 the offices of the Service throughout Canada reported 402,393 vacancies, 787,972 applications and 384,882 placements in regular and casual employment. These totals were somewhat higher than those for the year 1938 when there were listed 401,241 vacancies, 782,664 applications for work and 382,295 placements in regular and casual employment.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications———— Vacancies - - - - - - - - - Placements—o—o—o—o—o—o

Placements in December a year ago averaged 1,465 daily, consisting of 967 placements in regular and 498 in casual employment.

During the month of December, 1939, the offices of the Service referred 25,181 persons to vacancies and effected a total of 24,300 placements. Of these the placements in regular employment were 14,403, of which 10,210 were of men and 4,193 of women, while placements in casual work totalled 9,897. The number of vacancies reported by employers was 14,942 for men and 10,453 for women, a total of 25,395, while applications for work numbered 55,709, of which 40,942 were from men and 14,767 from women. Reports for November, 1939, showed 29,911 positions available, 70,581

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1929, to date:

Year	Placements		
	Regular	Casual	Totals
1929	260,747	137,620	398,367
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882

*137 placements effected by offices now closed.

Nova Scotia

During the month of December, positions offered through Employment Offices in Nova Scotia were over 2 per cent less than in the preceding month, but more than 4 per cent higher than during the corresponding month of the preceding year. There was a decrease in placements of nearly 1 per cent when compared with November, but an increase of over 3 per cent in comparison with December, 1938. The most important increase in placements by industrial divisions over December a year ago was in services, but this gain was largely offset by declines in construction and maintenance and farming. The changes in all other groups were small. Industrial divisions in which most of the placements were effected during the month were manufacturing 24; logging 37, construction and maintenance 461 and services 740, of which 526 were of household workers. Placements in regular employment numbered 362 of men and 123 of women.

New Brunswick

Employment opportunities, as indicated by orders received at Employement Offices in New Brunswick during December, were over 3 per cent better than in the preceding month and over 17 per cent above the corresponding month of the previous year. There was an increase also in placements of over 2 per cent when compared with November and of nearly 17 per cent in comparison with December, 1938. With the exception of a nominal decline in farming, all industrial divisions participated in the increase in placements over December a year ago, the most important gains being in construction and maintenance and services. Placements by industrial divisions included manufacturing 29; logging 24; construction and maintenance 555 and services 650, of which 520 were of household workers. During the month 229 mens and 129 women were placed in regular employment.

Quebec

Orders received at Employment Offices in the Province of Quebec during December called for over 22 per cent fewer workers than in the preceding month and over 36 per cent less than during the corresponding month of the previous year. There was a decrease also in placements of nearly 23 per cent when compared with November and of over 41 per cent in comparison with December, 1938. The large decline in placements from December a year ago was due to a substantial decrease under construction and maintenance. This loss was partly offset by a moderate gain in logging. Unimportant changes only were reported in all other groups. Industrial divisions, in which most of the placements were effected during the month, were manufacturing 142; logging 900; construction and maintenance 1,477 and services 2,630, of which 2,467 were of household workers. During the month 2,563 men and 1,407 women were placed in regular employment.

Ontario

There was a decline of over 17 per cent in the number of positions offered through Employment Offices in Ontario during December when compared with the preceding month, but a gain of nearly 8 per cent in comparison with the corresponding month of the previous year. Placements were over 19 per cent fewer than in November, but nearly 8 per cent above December, 1938. A fairly large increase in the manufacturing industries and a moderate gain in services accounted for the improvement in placements over December a year ago. The changes in all other groups were small and included increases in mining and trade and declines in logging and construction and maintenance. Placements by industrial divisions included manufacturing 866; logging 452; farming 386; construction and maintenance 2,751; trade 292 and services 3,645, of which 2,471 were of household workers. There were 2,913 men and 1,315 women placed in regular employment.

Manitoba

Opportunities for employment, as indicated by orders received at Employment Offices in Manitoba during December, were 18 per cent fewer than in the preceding month and nearly 51 per cent below the corresponding month of the previous year. Placements also showed a decrease of nearly 20 per cent when compared with November and of nearly 50 per cent in comparison with December 1938. There was a substantial decrease in farm placements when compared with December a year ago, which accounted for the decline under this comparison for the province as a whole. A moderate loss was also reported in services, but there were gains in construction and maintenance and manufacturing. Placements by industrial divisions included manufacturing 216; logging 213; farming 842; construction and maintenance 364 and services 907, of which 806 were of household workers. Regular placements numbered 1,658 of men and 316 of women.

Saskatchewan

The demand for workers, as indicated by orders received at Employment Offices in Saskatchewan during December, was nearly 6 per cent less than in the preceding month and nearly 84 per cent below the corresponding month of the previous year. There was a decrease also in placements of nearly 7 per

cent when compared with November and of nearly 84 per cent in comparison with December, 1938. The decline in placements from December a year ago was due to a substantial decrease in farming and a fairly large loss in services. The only change worthy of mention in other groups was a moderate gain in construction and maintenance. Industrial divisions, in which most of the placements were effected during the month, were farming 240; construction and maintenance 175 and services 590, of which 441 were of household workers. During the month 457 men and 284 women were placed in regular employment.

Alberta

During December Employment Offices in Alberta received orders for nearly 1 per cent more workers than in the preceding month, but over 16 per cent fewer than during the corresponding month of the previous year. There was a decline in placements of nearly 1 per cent when compared with November and of nearly 18 per cent in comparison with December, 1938. The only changes of importance in placements by industrial groups from December a year ago were a large reduction in farming and a moderate increase in logging. Placements by industrial divisions included logging 307; farming 774; construction and maintenance 223 and services 484, of which 404 were of household workers. There were 1,352 men and 314 women placed in regular employment.

British Columbia

There was a decline of over 14 per cent in the number of positions offered through Employment Offices in British Columbia during December, when compared with the preceding month and of nearly 51 per cent in comparison with the corresponding month of the previous year. Placements were over 13 per cent fewer than in November and over 50 per cent below those of December, 1938. The most important change in placements by industrial groups from December a year ago was a substantial decline in construction and maintenance. In addition, a moderate loss was reported in logging and smaller gains in services, trade, manufacturing and farming. Placements by industrial divisions included manufacturing 82; farming 125; construction and maintenance 1,110; trade 105 and services 908, of which 683 were of household workers. During the month 676 men and 305 women were placed in regular employment.

Movement of Labour

During the month of December, 1939, the offices of the Employment Service of Canada made 14,403 placements in regular employment, 6,503 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 473 were granted the Employment Service reduced transportation rate, 426 going to centres within the same province as the despatching office and 47 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may wish to travel to distant employment for which no workers are available locally.

Ontario offices during December issued 368 certificates for reduced transportation, 364 of which were provincial and 4 interprovincial. The latter were granted at St. Catharines to machinists' helpers bound for the Montreal zone. Provincially the movement was largely of workers engaged in bush operations; various offices assisting in the dispatch of 273 bush workers within the Port Arthur zone, 66 within the Sudbury zone and 20 within the Fort William zone. Transferred within the Port Arthur zone also, were 2 mine employees and one hotel worker who secured their certificates at the Port Arthur office. The Ottawa zone was the destination of one machine operator travelling from Sarnia while the North Bay zone received one cook from Pembroke. The labour movement in Manitoba during December originated at Winnipeg and comprised the transfer of 64 persons. Of these, 21 were bound for provincial situations and 43 for points outside the province. The transfers within the province were for the Winnipeg zone and included 11 bushmen, 5 farm hands, one farm domestic, 2 truck drivers and 2 sawmill workers. Of the persons proceeding to employment in other provinces, 41 bushmen and one riveter were bound for the Port Arthur zone and one farm hand for the Yorkton zone. In Alberta during December the Edmonton office transferred 32 persons at the reduced rate to employment within the territory administered by that city office among whom were 25 bushmen, 6 mine workers and one district nurse. Vouchers for transportation were issued in British Columbia during December to 9 persons going to provincial employment. These travelled on certificates received at Vancouver from which centre 5 miners were conveyed to Kamloops and 4 miners within the Vancouver zone.

Of the 473 workers who took advantage of the Employment Service reduced transportation rate during December, 217 travelled by the Canadian National Railways, 255 by the Canadian Pacific Railway and one by the Northern Alberta Railway.

(4) Building Permits Issued in Canada During December, 1939

The building permits issued by 58 cities in December, 1939, represented construction work valued at $6,035,212, as compared with $4,148,889 in November, 1939, and $3,482,915 in December, 1938. There was therefore an increase of $1,886,323, or 45·5 per cent in December as compared with the preceding month, and of $2,552,297, or 73·3 per cent in comparison with the same month in 1938. The total for December, 1939, was the highest for that month in the years since 1931.

The value of the building represented by the construction permits taken out during 1939 was $59,724,014; this was slightly lower than the aggregate of $60,817,332 reported in 1938, but with this exception was the largest aggregate since that for 1931. The cumulative total in each of the last eight years has, however, been decidedly below that for any earlier year of the record; the wholesale prices of building materials have recently been lower than in the same period of 1937 and the same as in 1938, although they continue higher than in any of the years, 1931-1936.

Detailed statements for December were received from some 50 cities, showing that they had issued about 225 permits for dwellings valued at more than $1,100,000, and 1,200 permits for other buildings at an estimated cost of more than $3,900,000. There were also seven permits taken out for engineering work at a cost of $519,279. During November, the construction of some 500 dwellings and 1,900 other buildings was authorized; these were estimated to cost approximately $1,850,000 and $2,200,000, respectively.

As compared with the preceding month, Prince Edward Island, Ontario, Manitoba, Saskatchewan and British Columbia reported increases in the value of the building authorized. The gains of $2,113,513, or 107·2 per cent in Ontario, and $354,151, or 100·8 per cent in British Columbia were most pronounced. There were declines in the other provinces, that in Quebec being the greatest; this amounted to $524,949, or 41·1 per cent.

The value of the building represented by the permits taken out in Prince Edward Island, New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia was higher in December, 1939, than in the same month of 1938, the most pronounced increase of $2,345,989, or 134·9 per cent, being in Ontario. Decreases were recorded in the remaining provinces, that of $405,848, or 35·1 per cent, in Quebec being greatest.

Of the four largest cities, Toronto reported important increases in the value of the building authorized as compared with November, 1939, and December, 1938; in Vancouver, there was a reduction in the former, but a gain in the latter comparison, while Montreal and Winnipeg reported declines as compared with either November, 1939, or December, 1938. Of the other centres, Charlottetown, Shawinigan Falls, Guelph, Hamilton, London, Oshawa, Port Arthur, St. Catharines, Sarnia, Welland, Windsor, Brandon, St. Boniface, Saskatoon, Edmonton, New Westminster and Prince Rupert reported increases in both comparisons.

Table I shows the value of the building authorized by 58 cities during the Decembers of the years since 1926, and also gives the statistics for the completed years; the 1939 figures are unrevised, while those for preceding years are revised. (A revised statement for 1939 will be issued next month). Index numbers, based upon the total value of the building authorized by these cities during 1926 as 100, are given below, as are the average index numbers of wholesale prices of building materials in the years, 1926-39.

TABLE I

Year	Value of permits issued in December	Value of permits issued in Twelve months	Indexes of value of permits issued in Twelve months (1926=100)	Average indexes of wholesale prices of building materials Twelve months (1926=100)
	$	$		
1939.....	6,035,212	59,724,014	38·2	89·3*

1929.....	14,688,682	234,944,549	150·2	99·0
1928.....	16,095,160	219,105,715	140·1	97·1
1927.....	11,755,566	184,613,742	118·0	96·1
1926.....	11,508,818	156,386,607	100·0	100·0

* Eleven months' average.

The unrevised statistics for 1939 indicate that last year's aggregate was slightly lower than that for 1938, but was higher than in 1937 and preceding years since 1931. However, the annual aggregate for each of those years has been considerably below the average for the

nineteen years, 1920-1938. The index number of wholesale prices of building materials in 1939, though lower than in 1937 and the same as in 1938, was higher than in earlier years since 1930.

Table II gives the value of the building permits issued by 58 cities in December 1939, and December, 1938. The 35 centres for which records are available since 1910 are marked thus "*".

[1] Report not received in time for tabulation.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JANUARY, 1940

Reports of Superintendents of the Employment Service of Canada

THE employment situation at the end of January, 1940, was reported by the superintendents of the Employment Service to be as follows:—

In the Maritime Provinces, farming was limited to chores and the cutting and hauling of fire-wood. Fishing showed considerable variation, good catches being reported by Halifax and Saint John, fair catches by New Glasgow, but poor from other centres. Logging continued active. There was a good demand for pit props. Coal mines in the New Glasgow area were in full operation while those in Cape Breton and vicinity worked from three and a half to six days per week. Very little construction work was in progress except in connection with airports and army huts. Manufacturing has increased and the majority of plants are working at capacity with full crews. Passenger and freight traffic by rail were heavy, but by bus and auto truck somewhat slowed down on account of road conditions. Large quantities of freight were being handled at the water-front. There was the usual demand for domestics and charworkers.

Farming activities in the Province of Quebec were confined to routine work. Logging operations were well advanced and hauling had commenced in some localities. A record season is anticipated in the Val d'Or district. Manufacturing in the metal industries was very active in Montreal, Three Rivers and

Sherbrooke, mainly due to war contracts. In textiles production was higher than in January, 1939. Leather and foods were operating at a high level of production in Montreal and Three Rivers. There was a slight decrease in manufacturing in Hull, Chicoutimi and Val d'Or. Seasonal slackness in construction was reported from all centres, although road work in Montreal and Hull provided some employment. New work has been started on a dam in the Rouyn zone. The completion of extension and improvement works in the mines at Val d'Or had released a large number of building tradesmen. Slackness generally was reported in trade. There was the usual demand for household workers.

In Ontario, farm placements held up well for the time of year. Inquiries are being received for help in the spring. Logging placements consisted chiefly of replacements. Hauling was progressing favourably. Mining operations continue normally, but very few placements are being made and large numbers of miners are available. In manufacturing, the only expansion of importance was in textiles and iron and steel, largely due to war contracts. Further increases would be made in production and staff levels if requirements in raw materials were fully met. Staff reductions were reported by plants engaged in the manufacture of goods and machinery for export due to a falling off in export trade and there was a decrease, also, in automobile production. All other industries were busy and many were adding to their staffs. Construction was considerably curtailed due to weather conditions, although work was progressing on buildings that were covered in. The erection and reconditioning of buildings for the Department of National Defence was keeping many workers employed, also municipal works such as the laying of sewers and pipe lines. A large number of building tradesmen were idle. A steady demand continued for household workers which was fully met, except in a few centres, for cooks-general and experienced domestics.

In the Prairie Provinces, the demand for farm hands was light and there were plenty of applicants available. It was anticipated, however, that a normal spring demand might result in a shortage of first-class men. The majority of placements in Manitoba were under the Farm Employment Plan. From Winnipeg it was reported that logging activities had been maintained despite the lack of snow. Several placements were made in the Yorkton zone, but there was very little activity elsewhere. Coal mining continues to be very good, but there is not much demand for additional help. Manufacturing was quiet. A milling plant at Medicine Hat had resumed operations after being closed for two weeks. Construction was almost entirely confined to repairs and alterations. Army huts were being started at Calgary. Trade was steady in Manitoba, but quiet in Alberta. The demand for household workers was somewhat better and a fair number of placements were made.

The demand for farm help in British Columbia was very small. Lumbering has shown some curtailment in the Great Central Lake district, but Queen Charlotte camps will re-open shortly. The reforestation scheme is steadily expanding and it is expected that by 1941 it will be possible to plant six million young fir trees on logged-off lands. Last year nearly one million trees were planted. Mining was active, but there was no demand for additional workers. There was little activity in construction. The dry dock and shipyard at Prince Rupert was fairly busy on overhauling work, but longshore work was quiet at New Westminster and Prince Rupert due to a shortage of boats. At Victoria there was sufficient work to keep regular longshoremen employed. Trade was fair. There was an increase in the number of orders for experienced household workers and many placements were made.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

(Owing to the late receipt of the necessary information, figures concerning the October-November 1939 employment situation in Great Britain were unavoidably omitted from the January issue and are recorded below. For the same reason the November-December record is omitted this month and will appear in the March issue.)

The British *Ministry of Labour Gazette*, December, 1939, summarized the employment situation as follows:—

Employment showed a slight improvement, on the whole, between 16th October and 13th November, 1939. For Great Britain and Northern Ireland, a total of 1,477,586 were registered as wholly unemployed (1,338,845) or temporarily stopped (138,741), a decrease of 22,307 compared with the figures for October 16, 1939, and a decrease of 433,707 when compared with the figures for November 14, 1938.

There were reductions between 16th October and 13th November, 1939, in the numbers unemployed in the coal mining industry, en-

gineering, metal goods manufacture, motor vehicle, cycle and aircraft manufacture, the principal textile industries, boot and shoe manufacture, the transport and distributive trades, the fishing industry, and the entertainment, sport, etc. industries. On the other hand, there were increases in the numbers unemployed in the building industry, agriculture and horticulture, tailoring, hat and cap making, and local government service.

The decrease in the numbers unemployed in November occurred mainly in the North of England and in Scotland; there was also a decrease in the Midlands Division. Unemployment increased in the South of England, in Wales and in Northern Ireland.

Among insured persons, aged 16-64, the percentage unemployed in Great Britain and Northern Ireland at 13th November, 1939, was 9·2, as compared with 9·3 at 16th October, 1939 and 12·6 at 14th November, 1938. For persons under the general scheme the corresponding percentages were 9·5 at 13th November, 1939, 9·6 at 16th October, 1939, and 13·0 at 14th November, 1938. For persons within the agricultural scheme the percentages were 5·1, 4·0, and 5·7 respectively.

United States

According to an official press release issued by Miss Frances Perkins, United States Secretary of Labor, nonagricultural employment increased by nearly a quarter of a million workers from mid-November to mid-December, due primarily to an increase of 390,000 workers in retail stores to handle increased volume of Christmas trade. It was stated that this gain brought employment in December to the highest level recorded since October 1937.

The following paragraphs taken from the official press release indicate the employment situation in the United States to be as follows:—

The resumption of full activity by certain automobile plants resulted in factory employment showing a slight contraseasonal increase of 0·2 per cent or approximately 15,000 workers in December.

Winter weather conditions brought a seasonal curtailment of employment on construction operations and in quarries. Transportation also showed a substantial decline, due, in part, to the reduction of nearly 30,000 employees on Class I steam-railroads in December. Anthracite and bituminous coal mines reported small decreases in employment, coupled with substantial losses in pay rolls resulting from sharply decreased production during the first half of December. Public utilities and other service industries reported small employment changes.

Total nonagricultural employment was more than 1,200,000 greater in December 1939 than in December 1938.

Factory Employment.—A slight gain of 0·2 per cent was reported in factory employment in December when usually there is a decline of 1 per cent in December. The increase marked the seventh consecutive monthly gain in employment in manufacturing industries. Weekly pay rolls rose by 2·1 per cent, or nearly $4,000,000, over the November level. Thirty-seven of the ninety manufacturing industries surveyed reported gains in employment and 44 reported pay-roll increases. Layoffs in many industries were smaller than seasonal. The most substantial gain was reported in the automobile industry, in which production was renewed after the settlement of a strike, employment increasing 15·6 per cent and pay rolls, 18·4 per cent.

The employment index for December 1939 (104·0 on the basis of 100 for the 3-year period 1923-25) stood 10·6 per cent above the level of a year ago and the pay-roll index (103·9) was 19·3 per cent higher. Both indexes were higher than any recorded since the fall months of 1937, but remained approximately 6 per cent below the levels reached in the earlier months of that year.

Employment in the durable goods group of industries continued to rise, the gain of 1·8 per cent bringing the December index (100·0) to the level of the 1923-25 average and 19·3 per cent above that of December, 1938. Seasonal factors contributed to a decline in employment in the non-durable goods group, the loss of 1·2 per cent in employment being accompanied by a small gain in pay rolls. Employment in the non-durable goods group in December 1939 was 3·9 per cent above the December 1938 level and pay rolls were 7·7 per cent higher.

Employment in the aircraft industry continued to expand for the fifteenth consecutive month, the gain of 6·3 per cent bringing the employment index to the highest ever recorded, more than 3½ times as high as the 1929 level. The gain of 4·5 per cent in employment in private shipyards raised the December index (138·8) above any recorded during the past 20 years.

Employment in Non-manufacturing Industries.—Retail stores reported a better-than-seasonal employment gain of 12·6 per cent for the Christmas trade, and the December employment index advanced to 101·2 per cent of the 1929 average. Pay rolls increased 9·8 per cent, and both employment and pay rolls exceeded the December 1938 levels by more than 3 per cent. The general merchandising group, which includes department, variety,

and general merchandising stores and mail-order houses, took on 38·0 per cent more workers to handle holiday trade and increased pay rolls by 35·4 per cent. The December employment and pay-roll indexes for this group were 152·4 and 129·7 per cent of the average for the year 1929, and both were at the highest point recorded over an 11-year interval. The gain in both employment and pay rolls since December 1938 was over 5 per cent. Apparel stores took on 11·3 per cent more workers, and jewellery stores added 24·3 per cent more employees to the their pay rolls to handle Christmas business. With the exception of a seasonal employment recession in firms dealing in lumber and building material (2·0 per cent), the principal lines of retail trade reported employment gains.

In metal mines an employment pick-up of 1·7 per cent and pay-roll gain of 4·2 per cent in December raised employment and pay rolls above the levels of December 1938 by 8·5 per cent and 22·9 per cent, respectively. The employment index, 67·6 per cent of the 1929 average, was at the highest level recorded in any month since December 1937. Quarries curtailed employment by 6·3 per cent and pay rolls by 8·8 per cent, both smaller declines than average. Employment continues substantially above 1938 levels. Employment and pay-rolls in oil wells declined slightly from November to December. Telephone and telegraph, electric light and power, and manufactured gas companies reported small seasonal employment losses of about 0·5 per cent from November to December, while employment on electric railroads remained virtually unchanged.

Employment in Private Building Construction.—Employment and pay rolls in private building construction decreased 6·8 per cent from November to December according to reports from 12,536 contractors employing 120,243 workers. These declines were less than the average decrease in December of the previous 5 years. Comparisons with December 1938 show a gain of 5 per cent in employment and 12·1 per cent in weekly pay rolls.

Employment in Public Works.—The seasonal increase of activity on work relief projects of the Work Projects Administration continued in December when 131,000 more persons were given employment. During the month 2,076,000 workers were employed as compared with 1,945,000 in November and 2,987,000 in December 1938. Pay rolls of $109,000,000 were $7,274,000 more than in November but $58,005,000 less than in the same month last year. Employment on Federal agency projects under the Work Projects Administration rose from 88,000 in November to 94,000 in December. Pay-roll disbursements for the month amounted to $4,625,000.

Work projects of the National Youth Administration furnished employment for 34,000 additional youths during December and 27,000 more students were added to the rolls of the Student Aid Program.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada, which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Mini-

mum Wages Scales of the respective provinces.

Respecting contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. The clause relating to wages and hours in the last named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency as may be approved by the Minister."

This Act, like the 1930 measure,, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not apear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee. Thus, with respect to works for the elimination of grade crossings, towards which assistance is granted from Dominion public funds under Orders of the Board of Transport Commisioners, and certain other works being carried out under agreement with the provinces which are also assisted by grant of federal funds, the same labour conditions are enforced which apply to works of building and construction undertaken for the various departments of the Dominion Government.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are

fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada:

GROUP "A" CONTRACTS

(1) *Works of Construction, Remodelling, Repair or Demolition*

NOTE: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provided that "Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work, and also specify that the rates of wages set out therein are *minimum* rates only and that nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

DEPARTMENT OF PUBLIC WORKS

Repairs and alterations to the R.C.N.V.R. Building at Stanley Park, Vancouver, B.C. Name of contractors, Allan & Viner Construction Co., Ltd., Vancouver, B.C. Date of contract, January 20, 1940. Amount of contract, $3,678. A fair wages schedule was included in the contract as follows:—

	Per hour
Carpenters and joiners	$0 90
Drivers	0 45
Drivers, horse and cart	0 60
Drivers, team and wagon	1 00
Labourers	0 45
Motor truck drivers	0 50
Motor truck driver and truck	1 50
Painters and glaziers	0 80
Lathers—wood	0 75
Electricians	1 00
Pile driver foremen	1 25
Pile driver engineers	1 12½
Pile driver boommen	1 00
Pile driver bridgemen	1 00
Pile driver men	1 00
Pile driver firemen	0 68¾
Pile driver derrick engineers	1 12½
Pile driver derrick firemen	0 68¾
Pile driver derrick men	1 00
Plasterers	1 00
Plasterers' helpers (mixing and tempering materials)	0 62½
Plumbers and steamfitters	1 00
Plumbers and steamfitters' helpers (all men assigned to help tradesmen)	0 50
Roofers—felt and gravel; patent	0 50

Construction of a survey launch for the Fraser River, B.C. Name of contractors, Vivian Engine Works, Vancouver, B.C. Date of contract, January 20, 1940. Amount of contract, $4,998. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmith	$0 75
Blacksmith's helper	0 56¼
Caulker (wood)	0 86
Electrician	0 83
Electricians' helper	0 50
Fitters (machine)	0 75
Labourer	0 50
Machinist	0 75
Machinists' helpers	0 50
Painter	0 75
Shipwright and joiner	0 83
Sheet metal worker	0 85½
Sheet metal worker helpers	0 50
Welder (acetylene)	0 82
Welder (electric)	0 90

Construction of a public building at Lockeport, N.S. Name of contractor, Mr. Howard A. Keddy, Liverpool, N.S. Date of contract, January 19, 1940. Amount of contract, $17,800 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 75
Brick and hollow tile layers' helpers (mixing and temperng mortar)	0 40
Carpenters and joiners	0 55
Cement finishers	0 50
Cement and concrete mixer operator:	
Steam	0 60
Gasoline or electric)	0 45
Drivers	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 60
Electricians (inside wiremen)	0 60
Hoist operators-tower (gasoline or electric)	0 45
Labourer	0 35
Lathers (metal)	0 55
Motor truck drivers	0 40
Motor truck driver and truck	1 35
Ornamental iron workers	0 55
Painters and glaziers	0 55
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 40
Plumbers and steamfitters	0 60
Roofers, felt and gravel: patent	0 40
Roofers, sheet metal	0 60
Sheet metal workers	0 60
Stonecutters	0 65
Stonemasons	0 75
Stonemasons' helpers (mixing and tempering mortar)	0 40

	Per hour
Structural steel workers	0 75
Tile setters	0 75
Tile setters' helpers (all men assigned to help tradesmen)	0 40
Watchman	0 30
Waxers and polishers (floor)	0 40

Placing gravel on the Berthier-St. Ignace Island roadway, Berthier Co., P.Q. Name of contractors, Armand Sicotte & Fils, Montreal, P.Q. Date of contract, December 19, 1939. Amount of contract, $9,275. A fair wages schedule was included in the contract as follows:—

	Per hour
Drivers	$0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 60
Labourers	0 35
Motor truck drivers	0 40
Motor truck driver and truck	1 35
Tractor operators	0 45
Watchman	0 30

Construction of a public building at Mattawa, Ont. Name of contractors, M. Sullivan & Son, Ltd., Arnprior, Ont. Date of contract, January 18, 1940. Amount of contract, $12,747 and unit prices for any additional work. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 80
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 40
Carpenters and joiners	0 60
Cement finishers	0 55
Cement and concrete mixer operators:	
Steam	0 65
Gasoline or electric	0 45
Drivers	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 65
Electricians (inside wiremen)	0 65
Engineers, operating, steam:	
Single or double drums	0 65
Three or more drums	0 75
Engineers on steel erection	0 80
Firemen, stationary	0 40
Labourers	0 35
Lathers—metal	0 60
Motor truck drivers	0 40
Motor truck driver and truck	1 40
Ornamental iron workers	0 55
Painters and glaziers	0 55
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 40
Plumbers and steamfitters	0 65
Roofers, felt and gravel: patent	0 40
Roofers, sheet metal	0 65
Roofers, shingles (wood, asbestos)	0 60
Sheet metal workers	0 65
Stonecutters	0 70
Stonemasons	0 80
Stonemasons' helpers (mixing and tempering mortar)	0 40
Structural steel workers	0 80
Terrazzo layers	0 75
Terrazzo finishers and helpers	0 60
Tile setters (asphalt tile)	0 75
Tile setters' helpers (all men assigned to help tradesmen)	0 40
Waxers and polishers (floor)	0 40
Welders and burners on steel erection	0 80
Watchman	0 30

Construction of an addition to the Botanical Laboratory at the Experimental Farm, Ottawa, Ont. Name of contractor, Mr. Alex. I. Garvock, Ottawa, Ont. Date of contract, January 10, 1940. Amount of contract, $29,042 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$1 00
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 50
Carpenters and joiners	0 85
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 70
Gasoline or electric	0 55
Drivers	0 45
Driver, horse and cart	0 60

Hoist operators-tower (gasoline or electric)	0 45
Labourers	0 35
Lathers (metal)	0 70
Motor truck drivers	0 40
Motor truck driver and truck	1 40
Ornamental iron workers	0 65
Painters and glaziers	0 65
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 42½
Painters (spray)	0 75
Plumbers and steamfitters	0 80
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 42½
Roofers, felt and gravel: patent	0 40
Roofers, sheet metal	0 65
Sheet metal workers	0 65
Stonecutters	0 80
Stonemasons	0 90
Stonemasons' helpers (mixing and tempering mortar)	0 42½
Structural steel workers	0 85
Tile setters (ceramic)	0 90
Tile setters (asphalt)	0 85
Tile setters' helpers (all men assigned to help tradesmen)	0 42½
Watchman	0 30
Waxers and polishers (floor)	0 40
Welders and burners on steel erection	0 85

Construction of a Barracks, Training and Storage building for the Royal Canadian Mounted Police at Rockcliffe, Ont. Name of contractor, Mr. Wm. D'Aoust, Eastview, Ont. Date of contract, December 4, 1939. Amount of contract, $21,423.37 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$1 00
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 50
Carpenters and joiners	0 85
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 70
Gasoline or electric	0 55
Drivers	0 45
Driver, horse and cart	0 60
Driver, team and wagon	0 80
Electricians (inside wiremen)	0 80
Engineers, operating, steam:	
Single or double drums	0 70
Three or more drums	0 80
Engineers on steel erection	0 80
Firemen, stationary	0 50
Labourers	0 45
Lathers (metal)	0 70
Linoleum layers	0 60
Motor truck drivers	0 50
Motor truck driver and truck	1 45
Ornamental iron workers	0 60
Painters and glaziers	0 70
Plasterers	0 85
Plasterers' helpers (mixing and tempering material)	0 50
Plumbers and steamfitters	0 95
Hoist operators-tower (gasoline or electric)	0 55
Roofers, felt and gravel: patent	0 50
Roofers, sheet metal	0 85
Roofers, shingles (wood, asbestos)	0 85
Sheet metal workers	0 85
Stonecutters	0 80
Stonemasons	1 00
Stonemasons' helpers (mixing and tempering mortar)	0 50
Structural steel workers	0 80
Terrazzo layers	0 75

	Per hour
Terrazzo finishers and helpers	0 60
Tile setters (ceramic)	1 00
Tile setters' helpers (all men assigned to help tradesmen)	0 50
Tile setters (asphalt)	0 80
Welders and burners: on steel erection	0 80
Watchman	0 40
Waxers and polishers (floor)	0 50

Raising the 100-Ton derrick at entrance of the Dry Dock at Esquimalt, B.C. Name of contractors, Hamilton Bridge, Western Ltd., Vancouver, B.C. Date of contract, January 16, 1940. Amount of contract, $18,781. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 75
Blacksmiths' helpers	0 50
Driver	0 45
Driver, team and wagon	0 85
Electricians	0 75
Engineers on steel erection	1 12½
Labourers	0 45
Machinists	0 75
Machinists' helpers	0 50
Motor truck driver	0 50
Motor truck driver and truck	1 50
Plumbers and steamfitters	0 90
Plumbers and steamfitters' helpers (all men assigned to help tradesmen)	0 50
Painters	0 65
Structural steel workers	1 12½
Stationary firemen	0 50
Welders and burners on steel erection	1 12½
Watchman	0 45

Construction of a public building at St. Henri de Lauzon, P.Q. Name of contractors, Messrs. Henri Lemelin and Joseph Lacroix, St. Romuald, P.Q. Date of contract, December 24, 1939. Amount of contract, $8,635 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Asbestos insulation workers	$0 60
Brick and hollow tile layers	0 80
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 60
Cement finishers	0 55
Cement and concrete mixer operators:	
Steam	0 60
Gasoline or electric	0 55
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 65
Electricians (inside wiremen)	0 65
Engineers, operating, steam:	
Single or double drums	0 60
Three or more drums	0 70
Engineers on steel erection	0 75

Construction of wharf repairs and an extension to the approach, Sturdies Bay, B.C.

Name of contractor, Mr. R. Bu...stead, Vancouver, B.C. Date of contract December 6, 1939. Amount of contract, approximately $4,545.75. A fair wages schedule was included in the contract as follows:—

	Per hour
Pile driver foreman	$1 25
Pile driver engineer	1 12½
Pile driver man	1 00
Boomman	1 00
Bridgeman	1 00
Fireman	0 68¾
Labourer	0 45

Construction of a float and renewal of wharf at Brownsville, B.C. Name of contractors, Fraser River Pile Driving Co., Ltd., New Westminster, B.C. Date of contract, December 13, 1939. Amount of contract, approximately $4,084.40. A fair wages schedule was included in the contract as follows:—

	Per hour
Pile driver foreman	$1 25
Pile driver engineer	1 12½
Pile driver man	1 00
Boomman	1 00
Bridgeman	1 00
Fireman	0 68¾
Labourer	0 45

Department of Transport

Construction of an equipment garage at Nakina, Ont. Name of contractors, Claydon Co., Ltd., Fort William, Ont. Date of contract, December 27, 1939. Amount of contract, $6,665. A fair wages schedule was included in the contract as follows:—

	Per hour
Bricklayers	$1 00
Bricklayers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 70
Cement finishers	0 60
Cement and concrete mixer operators (gas.)	0 50

DEPARTMENT OF PUBLIC WORKS

Construction and installation of interior fittings in the public building at Schreiber, Ont. Name of contractors, The Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, December 21, 1939. Amount of contract, $600.

Construction and installation of interior fittings in the public building in Star City, Sask. Name of contractors, Western Mfg. Co., Ltd., Regina, Sask. Date of contract, January 12, 1940. Amount of contract, $730.

Construction and installation of interior fittings in the public building at Millbrook, Ont. Name of contractors, Canadian Office & School Furniture Ltd., Preston, Ont. Date of contract, January 22, 1940. Amount of contract, $598.

Construction and installation of hydraulically operated gate valves in the Dry Dock at Esquimalt, B.C. Name of contractors, Dominion Engineering Co., Ltd., Montreal, P.Q. Date of contract, December 16, 1939. Amount of contract, approximately $17,800.

Construction of two rectifying plants for the conversion of the electrical power supply to the Dry Dock at Esquimalt, B.C. Name of contractors, Canadian Westinghouse Co., Ltd., Hamilton, Ont. Date of contract, December 21, 1939. Amount of contract, $2,206.14.

Construction of two rectifying plants for the conversion of the electrical power supply to the Dry Dock at Esquimalt, B.C. Name of contractors, Northern Electric Co., Ltd., Montreal, P.Q. Date of contract, December 28, 1939. Amount of contract, $25,138.64.

Increased Unemployment Allowances in Great Britain

Owing to the rise in the cost of living since the outbreak of war, new regulations have been drawn up by the Unemployment Assistance Board and approved by Parliament on December 12, 1939, under which the scale of payments to persons receiving unemployment assistance will be increased.

The new regulations make increases of 2s. a week in the rate of allowance for a husband and wife, 1s. a week in the rate for persons of 16 or over, and 6d. a week in the rate for children. Applicants in receipt of unemployment assistance for themselves and their dependants number about 435,000, and the total number of persons who will benefit by the increased allowances exceeds 1,000,000. Any increases which become payable under the new regulations will be independent of and additional to any extra amounts which may be allowed by way of winter allowances under the regulations made in 1938.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the Labour Gazette from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of employers and workers are also included. Verbally accepted agreements are so indicated.

Manufacturing: Animal Foods

Prince Rupert, B.C.—Canadian Fish and Cold Storage Company Limited and the Fish Packers' Federal Union, No. 49.

An agreement reached through a board under the Industrial Disputes Investigation Act, dated August 9, 1921, became effective August 1, 1921. This provided for certain basic rates of pay and for a bonus of $1 per week to all employees working in the sharp freezers and cold storage rooms. The wage rates were to be adjusted semi-annually according to the family budget of the Labour Gazette. The company's boarding house rates were to be similarly adjusted. (The report of this board was published in the Labour Gazette, September, 1921, page 1115). On July 24, 1922, an amendment provided that the agreement remain in effect subject to 30 days' notice, such notice to expire at the end of any six months' period.

January 15, 1934, the agreement was amended (Labour Gazette, April, 1934, page 373) to provide for a 5 per cent increase in wage rates which had been agreed to in June, 1933, from which date the new basic rates were set: ordinary time 44¼ cents, overtime 51½ cents, Sundays and holidays 54¾ cents, cullers 48½ cents; oilers and corepullers 50 cents for ordinary time, 57½ cents for overtime, 61½ cents for Sundays and holidays. The 1934 amendment also provided "that the semi-annual adjustment of wages effective January 15, 1934, shall be taken from the average of the six months from June, 1933 to January, 1934, of the family budget of the Canadian Labour Gazette, and future semi-annual adjustments shall be on the average of the previous six months."

Vacation: on March 9, 1937, the Company granted to all employees with one year's continuous employment with the Company, a vacation with pay of one week (8 hours).

On January 15, 1940, a further amendment to the agreement provides that for the period January 16, 1940 to July 15, 1940, the rates of wages will be increased 5 per cent over the figures which would have been payable under the previous amendment to the agreement. The new rates which are to be the new basic rates are: for shed—ordinary time 52 cents, overtime 60¾ cents, Sundays and holidays 64¼ cents; for corepullers—ordinary time 58¾ cents, overtime 67¾ cents, Sundays and holidays 72½ cents; for cullers 57 cents for ordinary time. The amendment further provided "that the semi-annual adjustments of wages, commencing July 16, 1940, shall be taken from the average cost of living figures of the family budget of the Canadian Labour Gazette for the Province of British Columbia. The British Columbia figures for the months July to December inclusive, 1939, in conjunction with the scale of wages above shown, shall be the basis, and the semi-annual adjustments shall be on the average of the previous six months."

Construction: Buildings and Structures

Canadian Standard Agreement between Elevator Manufacturers and the International Union of Elevator Constructors (Locals 101 at Quebec, 89 at Montreal, 96 at Ottawa, 50 at Toronto, 90 at Hamilton, 102 at Winnipeg, 122 at Edmonton and 82 at Vancouver).

Agreement to be in effect from December 1, 1939, to October 31, 1944.

It is, however, permissible for any individual local to negotiate special conditions with the employers for periods of six months for: modernization work, general repairs and for working hours on contract service. Any such special conditions are to be determined by a committee consisting of two representatives from the local union, one international representative of the union and three representatives of the manufacturers.

Only union members to be employed, if available, in: the erecting and assembling of all elevator machinery; the sinking, drilling, boring, or digging cylinder wells for hydraulic elevators or screw lifts; the wrecking or dismantling of old elevator plants.

Construction Work

Hours for construction work: 8 per day, 4 on Saturdays, a 44 hour week, with the exception of any locality where any five of seven specified building trades (bricklayers, plasterers, carpenters, electricians, sheet metal workers, plumbers and steamfitters, and iron workers) obtain the 40 hour week, in which cases the elevator constructors will work the 40 hour week. Should any five of these same building trades obtain a 6 hour day, the elevator constructors will also work a 6 hour day.

Wage rates for construction work: for elevator constructor mechanics to be the average wage rate of the five highest of the seven specified building trades mentioned above; the wage rate for helpers to be 70 per cent of the mechanic's rate. However, when the wage rate so computed falls below $1 per hour, the following adjustments to be made: from 70 to 79 cents inclusive, it is to be increased by 20 per ment; from 80 to 89 cents inclusive, it is to be increased by 15 per cent; from 90 to 99 cents, it is to be increased by 5 per cent; provided that with any such increase by these percentages, the rate does not exceed $1. When five or more men are employed on a job, the mechanic in charge of the job to have his hourly rate increased by 12½ per cent. Agreement on the wage rate may continue as long as satisfactory to both parties, but no change to be made more often than six months; 30 days' notice in writing to be given by either party desiring a

change. In case any of the seven specified trades has no established international union in that locality, then the rate of that trade is to be established by a representative of the International Union of Elevator Constructors and a representative of the elevator industry.

Repair Work

Hours for general repairs and modernization work are 8 per day, 4 on Saturdays, a 44 hour week, except that when any five of the seven named trades which are used in establishing the wage rate are being paid overtime on Saturday between 8 a.m. and 12 noon, then the elevator constructors shall be paid at double time.

Overtime and work on Sundays and holidays for general repairs and modernization work: double time.

Wages for mechanics and helpers on general repairs and modernization work to be the same as for construction work as noted above.

Contract Service

Contract service is any contract obtained by employers for regular examination or care of apparatus for a period of not less than one month.

Hours for contract service: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime: call backs on contract service on overtime to be paid at time and one half; all work on Sundays and holidays, double time.

Wage rate for mechanics on contract service to be 90 per cent of the construction rate.

Vacation for workers on contract service: men on this service for one year to be allowed two weeks vacation at the average weekly rate of pay for straight time.

General

The number of helpers employed on any job may not exceed the number of mechanics, except in wrecking old plants, hoisting material and on foundation work when there is no restriction on the number of helpers under the direction of a mechanic: when removing old and installing new cables on existing elevator installations, two helpers may be used to one mechanic.

For work outside the territorial jurisdiction of a local, travelling time and expenses incurred during the trip to be paid by the employer.

No strike to occur unless authorized by the local building trades council and with the approval of the executive board of the international union. Any dispute which cannot otherwise be settled will be submitted to arbitration locally and if not settled, to a Canadian arbitration committee of representatives of the union and of the elevator industry in Canada.

The hours in effect in February, 1940 under this agreement are 44 per week in all cases, except for construction work at Toronto and Hamilton where the 40 hour week is in effect.

Minimum hourly wage rates in effect in February, 1940, under this agreement for mechanics on construction work are: local 101—Quebec City 79 cents, Halifax 97 cents, Saint John, N.B., 90 cents; local 89—Montreal 91 cents; local 96—Ottawa 95 cents; local 50—Toronto $1; local 90—Hamilton, St. Catharines, Kitchener and London 95 cents, Windsor $1.03; local 102—Winnipeg $1; local 122—Edmonton, Calgary, Saskatoon and Regina $1; local 82—Vancouver $1.04. As noted above, the rates for helpers are 70 per cent of the mechanics' rates. For contract work the minimum rates for mechanics and helpers are 10 per cent less than the minimum rates for mechanics and helpers engaged in construction work.

Edmonton and Northern Alberta.—The Tile, Marble and Terrazzo Contractors of Northern Alberta and the Hod Carriers, Building and Common Labourers' International Union, Local 92 (Marble and Tile Machine Men, Helpers and Labourers).

Agreement to be in effect from September 6, 1939, to September 5, 1940, and thereafter from year to year subject to notice. (Until September 9, 1939, these workers in Edmonton were governed by a schedule for the marble and tile industry under the Industrial Standards Act, which was summarized in the Labour Gazette, September, 1938, page 1048.)

Only union members to be employed, if available; any others employed must become union members.

Hours: 8 per day, 4 on Saturdays, a 44 hour week. On out of town jobs, however, union members may if they wish work 9 hours.

Overtime: time and one half for first four hours, and double time thereafter; time and one half for work on Sundays and six specified holidays.

Hourly wages: wall machine men 75 cents, floor machine men 65 cents, mechanics' helpers 65 cents, labourers 55 cents. (These are the same as the previous rates except for an increase of 5 cents per hour for labourers.) For all work outside a radius of 15 miles from Edmonton post office, 10 cents per hour extra to be paid.

No union member may work for less than the above wage rates, nor may any member contract for work in competition with employers.

Transportation and travelling time for out of town jobs to be paid by the employer.

Disputes are to be referred to an arbitration board set up under the arbitration and conciliation laws of the Province of Alberta, and no cessation of work pending such arbitration.

Service: Business and Personal

Toronto, Ontario.—Certain Hotels and the Hotel and Restaurant International Alliance Local 280 (Beverage Dispensers).

This agreement affecting persons working in hotel, beverage and tap rooms is reported to have been signed by over ninety hotels in Toronto and district during September, 1939, and later, and is to be in effect to August 31, 1940. Sixty days' notice to be given by either party desiring a change.

All employees are to be union members or any others employed are to join the union.

Hours: 51 per week to be performed in six days (a decrease of three hours per week from the hours under the previous agreement). All full time employees to be entitled to one night a week off from 6 p.m.

Overtime: 50 cents per hour. Wages not to be deducted from steady men for time lost on legal holidays affecting beverage rooms.

Minimum weekly wage rates in class A hotels: $21 per week for waiters handling beverage and $24 for tapmen. Minimum weekly

wage rates in class B hotels: $18 for waiters, $21 for tapmen. (These are increases of $2 per week over the rates of the previous agreement.) Spare men to be paid 50 cents per hour with at least four hours' employment, $4 per day of 8½ hours. A waiter employed 5 hours per day, with not more than one split within 7 hour period per day, 6 days per week, to be considered a steady spare man and paid at $14 per week. Not more than one man may work this shift in each shop employing up to five steady waiters. Any employee receiving higher than the minimum rates may not have his wage rates reduced.

Uniforms to be supplied and laundered at the expense of the proprietor.

Vacation: all regular or short shift employees to receive six consecutive days' vacation with pay each year, if they have been in the establishment a year.

Provision is made for the settlement of disputes by arbitration.

Collective Labour Agreements Act, Quebec

The following amendments to agreements and corrections have recently been made obligatory by Orders in Council and are summarized in the next article:

Iron Oxide Miners, Red Mill District (amendment).

Corrugated Paper Box Industry, Province of Quebec (amendment).

Furniture Industry, Province of Quebec (correction and amendments).

Building Materials, Province (amendment).

Building Trades, Hull (amendment).

Longshoremen (inland and coastal navigation), Montreal (amendment).

Garages and Service Stations, Montreal (correction and amendment).

Barbers and Hairdressers, St. Hyacinthe (amendment).

Shoe Shiners, Montreal (repeal).

Industrial Standards Act

The following schedules have recently been made binding by Orders in Council and are summarized in a special article below:

Loggers, Massey Zone.

Barbers, Brampton.

Barbers, Goderich, Clinton and Seaforth.

COLLECTIVE LABOUR AGREEMENTS ACT, QUEBEC

Recent Proceedings under the Act

THE Collective Labour Agreements Act which was assented to March 18, 1938, amends the Act respecting Workmen's Wages, 1937, by changing the title of the Act and by certain other changes which are summarized in the May, 1938, issue of the LABOUR GAZETTE, page 503. Amendments to the Act are noted in the LABOUR GAZETTE, June, 1939, page 576. Agreements and regulations under the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Labour Agreements Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act, made obligatory on all employers and employees in the trade, industry, commerce or occupation within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable, with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date of publication of the Order in Council in the *Quebec Official Gazette,* or its provisions may be made retroactive for a period not exceeding four months. The Order in Council may be amended or revoked at any time by the Lieutenant-Governor in Council and such amendment or revocation must be published in the *Quebec Official Gazette.* Unless otherwise stipulated, these agreements do not apply to provincial government departments or services or to work done by a third party for the provincial government under a contract providing for a scale of minimum wages. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette,* the committee is constituted a corporation. A joint committee may require certificates of competency from workers within the scope of the agreement in cities and towns

of 5,000 or more and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issue beginning May, 1938.

Recent proceedings under the Act include the amendment of eight agreements, the correction of two agreements and the repeal of one, all of which are noted below. Requests for the extension of new agreements affecting printing trades at Quebec and hardware stores also at Quebec were published in the *Quebec Official Gazette,* January 27. In addition, Orders in Council were published in the *Quebec Official Gazette,* January 5 and 20 approving the constitution and by-laws of certain joint committees and authorizing the levying of assessments by other joint committees, as listed below.

Mining: Non-ferrous Smelting and Quarrying

IRON OXIDE MINERS, RED MILL DISTRICT.—An Order in Council, approved December 29, and published in the *Quebec Official Gazette,* January 5, amends the previous Order in Council for these workers (LABOUR GAZETTE, December, 1937, page 1384) by providing that from November 6, 1939, the minimum hourly wage rates be: miller 45 cents, foreman in mine 37½ cents, fireman and all those working inside the establishment 37½ cents, employee working in the mine 35 cents. (These are in all cases increases of 2½ cents per hour over the previous rates).

Manufacturing: Pulp, Paper and Paper Products

CORRUGATED PAPER BOX INDUSTRY, PROVINCE OF QUEBEC.—An Order in Council, approved January 13, and published in the *Quebec Official Gazette,* January 20, amends the previous Orders in Council for this industry (LABOUR GAZETTE, February, 1939, page 218, March, page 335 and June, page 628) by providing that the agreement be renewed automatically from year to year subject to notice.

Manufacturing: Miscellaneous Wood Products

FURNITURE INDUSTRY, PROVINCE OF QUEBEC.—A correction to the last Order in Council for this industry (LABOUR GAZETTE, January, page 69) was published in the *Quebec Official Gazette,* January 13, which substitutes "boiler firemen" for the word "kettlemen." (Previous Orders in Council for this industry were summarized in the LABOUR GAZETTE, December, 1937, page 1386, February, 1938, page 214, October, 1938, page 1170). An Order in Council, approved January 18, and published in the *Quebec Official Gazette,* January 27, amends the previous Orders in Council by providing that the town of Rivière du Loup be a part of zone III.

Manufacturing: Metal Products

ORNAMENTAL IRON AND BRONZE INDUSTRY, MONTREAL.—As noted below under "Manufacturing: Non-Metallic Mineral Products," this industry in the Montreal district, was included with the building materials industry in the province, which agreement was not renewed after December 31, 1939, for the ornamental iron and bronze industry.

Manufacturing: Non-Metallic Mineral Products

BUILDING MATERIALS, PROVINCE.—An Order in Council, approved December 29, and published in the *Quebec Official Gazette,* January 5, amends the previous Order in Council for this industry (LABOUR GAZETTE, June, 1939, page 628 and September, page 951) by providing that the agreement which was to expire December 31, 1939, should remain in effect for a further three months to March 31, 1940, except in so far as it relates to the ornamental iron and bronze industry.

Construction

ORNAMENTAL IRON AND BRONZE INDUSTRY, MONTREAL.—As noted above under "Manufacturing: Non-Metallic Mineral Products," this industry in the Montreal district was included with the building materials industry in the province, which agreement expired December 31, 1939, and was not continued after that date for the ornamental iron and bronze industry.

BUILDING TRADES, HULL.—An Order in Council, approved January 18, and published in the *Quebec Official Gazette,* January 27, amends the previous Orders in Council for these trades (LABOUR GAZETTE, July, 1938, page 798, November, page 1300, March, 1939, page 335, October, page 1066 and December, 1939, page 1280) by adding Labelle County to the territorial jurisdiction, under the same conditions as for the county of Pontiac, etc.

Transportation and Public Utilities: Water Transportation

LONGSHOREMEN (INLAND AND COASTAL NAVIGATION), MONTREAL.—An Order in Council, approved January 13, and published in the *Quebec Official Gazette,* January 20, amends the previous Order in Council for these work-

ers (Labour Gazette, June, 1939, page 629) by providing that the agreement be continued in effect until March 31, 1940.

Trade

Garages and Service Stations, Montreal.—See under "Service: Custom and Repair."

Service: Custom and Repair

Garages and Service Stations, Montreal.—A corrected version of this agreement (which was summarized in the Labour Gazette, December, 1939, page 1280) was published in the *Quebec Official Gazette,* January 13. The corrections do not affect the summary as given in the Labour Gazette except that the parties to the agreement are stated to be: The Automobile Section of the District of Montreal of the Retail Merchants Association of Canada, Inc., le Syndicat National de l'Auto-Voiture, Inc. (the National Union of Automobile Workers, Inc.) and La Conseil National du Travail des Employés de Garage de Montréal (The National Labour Council of Garage Employees of Montreal). In the territorial jurisdiction, for "Saint-Jean-Napierville" read "St. John, Napierville"; for "Vaudreuil-Soulanges", read "Vaudreuil, Soulanges."

An Order in Council, approved January 13, and published in the *Quebec Official Gazette,* January 20, amends this agreement, but does not alter the summary of the conditions as given in the Labour Gazette, December, 1939, page 1280.

Service: Business and Personal

Barbers and Hairdressers, St. Hyacinthe.—An Order in Council, approved January 13, and published in the *Quebec Official Gazette,* January 20, amends the previous Orders in Council for these trades (Labour Gazette, October, 1938, page 1174, November, page 1300 and January, 1940, page 70) by making two changes in the scale of prices to be charged customers.

Shoe Shiners, Montreal.—An Order in Council, approved January 13, and published in the *Quebec Official Gazette,* January 20, repeals the Orders in Council affecting these workers (Labour Gazette, February, 1939, page 219).

Joint Committees

The constitution and by-laws of the joint committees set up under the following agreements were approved or amended by Orders in Council and published in the *Quebec Official Gazette,* January 5 and 20:

Barbers and Hairdressers, St. Hyacinthe (amendment).

Retail Stores, Quebec (amendment).

Notices were published in the *Quebec Official Gazette,* January 5, and 20, that authorization was given by Orders in Council for the joint committee to levy assessments on employers and employees, parties to the following agreements:

Lithographing Industry, Province.

Printing Trades, Montreal.

Clerks and Bookkeepers, Jonquière, Kenogami, etc.

Corrugated Paper Box Industry, Province.

Cloak and Suit Industry, Province.

Building Materials, Province.

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Ontario

In four provinces—Ontario, Alberta, Nova Scotia and Saskatchewan—legislation provides that, following a petition from representatives of employers or employees in any industry, the Provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zone designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. The administration and enforcement of the Act is placed in Ontario under the Industry and Labour Board, assisted by industrial standards officers; in Alberta under the Board of Industrial Relations; in Nova Scotia under the Minister of Labour, who may appoint inspectors; in Saskatchewan under the Commissioner of Labour and Public Welfare. Reviews of these Acts and amendments have been published in the Labour Gazette, as follows: Ontario, in

the issues of June, 1935, page 530, May, 1936, page 410, May, 1937, page 505, May, 1938, page 501, and June, 1939, page 574; Alberta, in June, 1935, page 504, June, 1936, page 501, June, 1937, page 640, June, 1938, page 633, and June, 1939, page 567; Nova Scotia, in June, 1936, page 604, and July, 1939, page 671; Saskatchewan, in the issue of June, 1937, page 635, May, 1938, page 507, and June, 1939, page 581. Schedules of wages and hours recently made binding by Orders in Council under these Acts are summarized below.

Similar legislation is in effect in Part II of the Fair Wages Act of Manitoba for certain industries (LABOUR GAZETTE, May, 1938, page 499, and June, 1939, page 570) and in the Industrial Standards Act of New Brunswick, 1939 (for the construction industry), in effect since August 10. Up to the end of January, however, no schedules had yet been made obligatory in these two provinces.

Ontario

Logging

LOGGERS, MASSEY ZONE.—An Order in Council, dated December 28, 1939, and published in *The Ontario Gazette*, January 6, repeals the schedule for loggers in the Massey Zone (vicinity of Sudbury) which came into effect September 11, 1937, and was summarized in the LABOUR GAZETTE, December, 1937, page 1389.

Service: Business and Personal

BARBERS, BRAMPTON.—An Order in Council, dated December 28, and published in *The Ontario Gazette*, January 6, makes binding in the town of Brampton the terms of a schedule governing the barbering industry, from January 16, 1940, "during pleasure."

Hours are those during which barber shops are permitted to be open by the municipal by-laws. Eight holidays are specified, and barber shops are closed at 12.30 p.m. on Wednesdays.

Minimum wage rates for barbers: those working full time on a straight salary basis $18 per week; those given full time employment on a percentage or commission basis, $13 per week plus 50 per cent of the proceeds in excess of $19 from the work of the employee; those working four hours per day or less from Monday to Friday and all day or less on Saturday, $7.50 per week plus 50 per cent of the proceeds in excess of $12.50 from the work of the employee; those working on Saturdays or the day before a holiday and on the previous evening only, $5 per week plus 50 per cent of the proceeds in excess of $7.50 from the work of the employee; those employed on Saturday or the day before a holiday, $3.50 per day or part thereof, plus 50 per cent of the proceeds in excess of $6 from the work of the employee; those working on days other than Saturdays or the day before a holiday, $2.50 per day or part thereof, plus 50 per cent of the proceeds in excess of $4 from the work of the employee.

A scale of minimum prices which must be charged customers is included in the schedule.

BARBERS, GODERICH, CLINTON AND SEAFORTH.—An Order in Council, dated December 28, and published in *The Ontario Gazette*, January 6, makes binding the terms of a schedule governing the barbering industry in the towns of Goderich, Clinton and Seaforth, from January 16, 1940, "during pleasure."

Hours are those during which barber shops are permitted to be open by the municipal by-laws. Eight holidays are specified.

The minimum wage rates are the same as in effect for barbers at Brampton, as noted above.

A scale of minimum prices which must be charged customers is included in the schedule.

Apprenticeship and Education in France in Wartime

The French Union of Metallurgical and Mining Industries is concerned about the prospect that the supply of skilled workers available for industrial undertakings will be inadequate even after a number of these workers who are at present serving with the colours have been posted to the undertakings.

The Union is of opinion that the first step to make good this deficiency would be to see that the apprenticeship arrangements already in existence work normally in spite of the difficulties arising out of present circumstances. It has therefore asked its more important member firms to report on what effects present circumstances have had on the organization of apprenticeship in their respective areas (requisitioning by military authorities of premises, workshops, or lecture-rooms used for training apprentices, mobilization of instructors, etc.).

The enquiry will show whether these measures have interfered with apprenticeship; it will further enable the organization in question to take the necessary measures, so far as the requirements of the present situation will allow, to have premises which have been requisitioned restored to their normal use and instructors detailed for the training of apprentices.

The Union has asked the Industrial Chambers affiliated to it to help in carrying out the enquiry and to impress upon industrialists the vital need for training skilled workers.

PRICES, RETAIL AND WHOLESALE IN CANADA, JANUARY, 1940

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, both the cost per week of a list of certain staple foods, fuel and lighting and rent entering into a family budget and the Dominion Bureau of Statistics weekly index number of wholesale prices being little changed from the figures of the previous month.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was $8.74 at the beginning of January as compared with $8.77 for December, 1939; $8.27 for January, 1939; $8.68 for January, 1938; $6.67 for March, 1933 (the low point in recent years); $11.88 for January, 1930; $11.03 for January, 1922; and $16.92 for June, 1920 (the post war peak). Thirteen commodities showed advance in cost at the beginning of January as compared with the previous month while six were lower and ten were unchanged. A substantial fall was recorded in the cost of eggs. Other changes were slight, the most important being increases in the cost of fresh meats, cheese, flour and potatoes. Including the cost of fuel and rent with that of foods the total cost was $17.70 at the beginning of January as compared with $17.72 for December, 1939. In fuel there were increases in the cost of anthracite and bituminous coal. Rent was unchanged. Comparative figures for certain other dates are $16.93 at the beginning of September, 1939; $17.18 for January, 1939; $17.48 for January, 1938; $15.41 for June, 1933 (the low point in recent years); $22.17 for January, 1930; $21.52 for January, 1922; and $26.92 for July, 1920 (the post war peak).

In wholesale prices the Dominion Bureau of Statistics weekly index number on the base of 1926 as 100 was relatively stable during January following an upward movement in progress since August. Some comparative figures are 82·2 for the week ended February 2; 82·4 for that ended January 26; and 82·2 for that ended December 29, 1939. The latest figures available on a monthly basis are for December, 1939, when the index number was 81·7 as compared with 72·4 for August, 1939; 73·2 for January, 1939; 83·8 for January, 1938; 63·5 for February, 1933 (the low point in recent years); 95·3 for January, 1930; 97·1 for January, 1922; 164·3 for May, 1920 (the post war peak). In the classification according to chief component materials changes in the principal groups were mostly fractional, the Wood Products group and the Non-Metallic Minerals group being higher while the remaining six groups were somewhat lower. Canadian farm products as a group was down during the month from 70·2 to 69·4, the latter figure being 13 per cent higher than at the end of August. An index of the prices of 30 industrial materials also declined slightly during January but was still 21 per cent higher than in August, 1939. The general index number at the end of January was about 14 per cent higher than in August, 1939.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of January of seventy-two stable foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the Labour Gazette, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The cost of a list of staple foods, fuel and lighting and rent, entering into the budget of a family of five is calculated in terms of the average prices in the cities for which reports are received, and includes twenty-nine

staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of food tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the calculation serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the list of foods entering into the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in Other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended February 2, 1940; monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(Continued from page 176)

Retail Prices

Meat prices at the beginning of January, 1940, were in the main slightly upward following the movement to somewhat lower levels in November and December, 1939. Sirloin averaged 28·1 cents per pound at the beginning of January as compared with 27·8 for December and 29·9 cents for October. Mutton was 24·8 cents for January, 1940, and 24·3 cents for December, 1939. Fresh pork averaged 23·4 cents per pound at January 1, 23·1 cents at December 1, and 24·5 cents at October 1. The price of eggs was substantially lower in nearly all localities, the Dominion average being down from 41·5 cents per dozen in December to 33·9 cents in January. The price in January, 1939, was 38·6 cents per dozen. The price of milk has been unchanged in the average since November, 1939, at 10·9 cents per quart. Creamery butter was 32·5 cents per pound in January, 1940; 32·7 cents in December, 1939 and 26·4 cents in January, 1939. The price of cheese advanced in most localities and was up in the average from 23·4 cents for December, 1939 to 24·3 cents for January, 1940. The Dominion average price of bread has been unchanged since June, 1939 at 6·5 cents per pound a level fractionally lower than at the beginning of 1938. Flour at 3·4 cents per pound was somewhat higher in January than in the previous month. Potatoes were about 5 cents per hundred pounds higher at $1.69. Tea averaged 1 cent per pound higher at 64·5 cents per pound. The price at the beginning of September was 58·3 cents per pound. United States anthracite coal was up in the average from $14.89 per ton to $14.95 and bituminous coal from $9.67 per ton to $9.74.

The following are the prices reported for Welsh coal "cobbles" and "French nut" at the beginning of January, 1940: Halifax $17.50; Charlottetown $14.50-$15.50; Saint John $14.50; Quebec $14.75; Three Rivers $15.50 and $14.50;

Sherbrooke $16.75; St. Hyacinthe $15; Thetford Mines $17.50; Montreal $15-$15.25; Ottawa $16.75; Kingston $16; Belleville $16.50; Peterborough $17.50; Oshawa $15.50; Toronto $15; St. Catharines $15.75; Hamilton $15.50; Galt $16-$16.50; St. Thomas $16.50; Cobalt $20; Timmins $19.75; Port Arthur $18; Fort William $18; Winnipeg $20.50.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices, in Great Britain and several of the principal commercial and industrial countries are included in "Prices in Canada and Other Countries, 1939," which will be issued shortly as a supplement to the Labour Gazette.

Since these monthly notes are all compiled from Birtish and foreign sources the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the Labour Gazette. In Great Britain both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

In most of the continental European countries some measure of control over prices and distribution has been put in force with consequent effect upon prices. In some of these countries the publication of price data has been suspended and in the case of Germany, direct information will henceforth be unobtainable although information contained in the official publications of neutral countries and in the press will be noted.

Great Britain and Northern Ireland

Wholesale Prices.—The Board of Trade index number on the base 1930=100, was 120·9 for December as compared to 117·2 for November, an increase of 3·2 per cent for the month. As in the three previous months each of the eleven groups showed increases. The index for the combined food and tobacco groups increased 4·2 per cent, there having been increases of 9·3 per cent in the index of cereal prices, 4·3 per cent in prices of meat, fish and eggs and 0·7 per cent in other food and tobacco. The index of prices of industrial materials and manufactures was up 2·6 per cent for the month, the more important increases in its sub-groups being those in cotton which increased 14·8 per cent and non-ferrous metals which increased 7·7 per cent. Comparing the "all items" index for December, 1939, with that for December, 1938, we find that there has been an increase of 23·0 per cent.

For some years past this article has noted the *Statist* monthly index number which is computed on the base 1867-1877=100. The last such note covering figures for the end of August appeared in the October issue of the Labour Gazette. Figures are now available for September, October and November. At the end of August, the all commodities index was 90·4, the figures for the three succeeding months being 99·7, 105·8 and 112·2 respectively. The index for foodstuffs which was 77·1 at the end of August was 89·1, 95·8 and 99·2 for the three succeeding months. The "all materials" index which covers minerals, textiles and sundries was 100·2, 107·4, 113·1 and 121·8 on the same dates. The all commodities index number for November 30, was 6·0 per cent higher than that for the end of the previous month and 28·3 per cent higher than that for November, 1938; the index of prices of foodstuffs was up 3·3 per cent for the month and 31·5 per cent for the year while that for all materials was up 7·7 per cent for the month and 26·5 per cent for the year.

Eire

Cost of Living.—The cost of living index number of the Department of Industry and Commerce on the base July, 1914=100, was 192 at mid-November as compared with 173 at mid-August, being an increase of 11·0 per cent for the quarter. During the same period the index of food prices increased 12·6 per cent, that for clothing increased 9·3 per cent and that for fuel and lighting materials increased 15·0 per cent. The index for rent which is computed annually was 129, showing no change from the November, 1938, figure.

India

Wholesale Prices.—The index number of the Labour Office, Government of Bombay, on the base July, 1914=100, was 120 for September as compared with 103 for August, showing an increase of 16·5 per cent for the month. The "all food" index rose 7·3 per cent from 110 in August to 118 in September

while that for non-foods rose 21·2 per cent from 99 to 120, the greatest increase in any sub-group being one of 71·7 per cent in metals. As compared with the general index for September, 1938, that for September, 1939, showed an increase of 18·8 per cent.

COST OF LIVING.—The official index number of the working class cost of living at Bombay, on the base July, 1933, to June, 1934=100, was 108 for October, 1939, as compared to 106 for September and 105 for August. The index of food prices rose from 114 in September to 119 in October, that for clothing rose from 84 to 88, while that for fuel and lighting materials declined from 100 to 98 and those for rent and sundries were unchanged at 100 and 98 respectively.

United States

WHOLESALE PRICES.—The Bureau of Labor Statistics index number, on the base 1926=100, was 79·2 for December, showing no change from that for November. Of the ten sub-groups which make up the index five showed increases over their November levels, two were unchanged and three showed decreases. The most important increase was one of 2·1 per cent in textile products; sundries increased 0·5 per cent, farm products 0·4 per cent, while the chemicals and drugs sub-group and the house-furnishing sub-group each increased 0·1 per cent. The index of prices of fuel and lighting materials declined 1·7 per cent, while that for food declined 0·6 per cent and that for hide and leather products declined 0·3 per cent. The indexes for building materials and for metals and metal products were unchanged. In December, 1938, the all commodities index was 77·0, the corresponding figure for 1939 being 2·9 per cent higher.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1939

THE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the fourth quarter of 1939 was 254, there being 105 in October, 82 in November and 67 in December.

The report for the third quarter of 1939, showing 273 fatalities, was given in the LABOUR GAZETTE, November, 1939, page 1197. In the fourth quarter of 1938, 262 fatal accidents were recorded (LABOUR GAZETTE, February, 1939, page 232).

The supplementary lists of accidents not reported in time for inclusion in the reports covering the periods in which they occurred, contains 42 fatalities for the first three quarters of 1939, and 2 fatalities for 1938.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial Workmen's Compensation Boards, the Board of Transport Commissioners of Canada, and certain other official sources as well as from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the fourth quarter of 1939 were as follows: agriculture, 40; logging 46; fishing and trapping 12; mining, non-ferrous smelting and quarrying, 34; manufacturing 27; construction 35; electric light and power 1; transportation and public utilities 38; trade, 11; service 10.

Of the mining accidents, 23 were in "metalliferous mining," 10 in "coal mining," and 1 in non-metallic mineral mining and quarrying n.e.s."

Of the accidents in manufacturing, two were in "textiles and clothing," ten in "saw and planing mill products," three in "wood products," one in "pulp, paper and paper products," six in "iron, steel and products," two in "non-metallic mineral products," and three in chemical and allied products.

In construction there were 22 fatalities in "building and structures," one in "railway," ten in "highway and bridge," and two in "miscellaneous construction."

In transportation and public utilities there were 16 fatalities in "steam railways," fifteen in "water transportation," five in "local and highway transportation" and two in "storage."

In trade there were three fatalities in "wholesale," and eight in "retail."

Of the fatalities in service, four were in "public administration," one in "recreational," two in "custom and repair," one in "personal domestic and business," and two in "professional establishments."

There was no serious disaster resulting in the loss of a large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows:—

At Quarryville, New Brunswick, on October 9, six loggers were killed when a truck skidded

into a bridge abutment, the brakes having failed.

On October 26, four miners lost their lives following a rock burst in a mine at Kirkland Lake, Ontario.

On December 31, three coal miners were gassed in a mine at Cadomin, Alberta.

On October 19, a marine engineer, a ship captain and a deckhand were drowned when a fish packing boat foundered in the Gulf of Georgia, British Columbia; and on November 11, two fishermen were drowned in Fraser River, British Columbia.

A farmer and his son were burned on November 2, in a fire that destroyed their home near Ste. Angele, Quebec.

Two wood cutters broke through ice and were drowned in Lake Ospasatika, Quebec, about December 5.

Two explosives plant workers were killed on November 20 in a powder explosion at Brownsburg, Quebec.

When a train struck their auto on October 17, two painters were killed near Quebec.

A boat driver and helper were drowned in Upper Twin Lake, Ontario, on October 8, when a boat shipped water and sank.

Supplementary Lists of Accidents

A supplementary list of accidents occurring during the first three quarters of 1939 has been compiled containing 42 fatalities, of which one was in agriculture, five in logging, one in fishing and trapping, four in mining, non-ferrous smelting and quarrying, five in manufacturing, seven in construction, two in electric light and power, six in transportation and public utilities, six in trade and five in service. One of these accidents occurred in January, five in February, two in March, one in April, one in May, three in June, two in July, four in August and twenty-three in September.

A further supplementary list of accidents occurring in 1938 has been made. This includes two fatalities of which one was in construction and one in transportation and public utilities. One of these accidents occurred in November and one in December.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Upholds Power of Joint Committee under Quebec Collective Agreements Act to Bring Action

IN an action brought by the Joint Committee of the Shoe Industry against Edmond Dumont, shoe manufacturer of Rimouski, for $1,913.68 alleged due in accordance with the rates legalized under the Quebec Collective Labour Agreements Act, the defendant took exception to the form in which the claim was presented and moved to have the action dismissed. The motion was rejected with costs by Mr. Justice Savard of the Superior Court.

Section 35 of the statute stipulates that in municipalities, such as Rimouski, where it is not necessary for a workman to have a certificate of competency, an employee may bring a civil action on his own behalf only after he has taken an affidavit that according to the custom of the industry he is a skilled workman. The defendant claimed that the action by the joint committee could not be maintained since the workmen, on whose behalf it was brought, had not made sworn declarations as to their competence. The Court, however, pointed out that the Act conferred on a joint committee the rights and liabilities of a corporation and stipulated that the committee, without having to establish any assignment of claim from the persons concerned and in spite of any express or implied renunciation of the latter, could act on behalf of employees who did not themselves take action within one month from the date on which their wages were due or who, after taking action did not press the case. It was held that the law was designed to permit a joint committee to act whenever it thought necessary in order to protect the workmen, to prevent any collusion between employers and employed which would have the effect of nullifying the provisions of the statute or to intervene on his behalf when a workman, through fear of dismissal, failed to take action or to proceed with any action he had begun. The Court considered that if the defendant's argument was upheld and the action thrown out on that ground and if the workmen concerned refused to take affidavits, the application of the Act would become impossible and the plaintiff's powers under it would be useless. Moreover, Mr. Justice Savard considered that the defendant would suffer no prejudice through lack of the declarations of the workmen since he had had opportunity to see them at work and to judge their competence and there was nothing to prevent him making this defence and proving, if he could, that the workmen were incompetent. *Joint Committee for the Shoe Industry v. Dumont,* Superior Court, Rimouski, November 30, 1939.

Saskatchewan Appeal Court Orders New Trial where Jury awards Excessive Damages for Wrongful Dismissal

On November 28, 1939, the Saskatchewan Court of Appeal unanimously ordered a new trial, the costs of the first to abide the results of the second, and allowed with costs an appeal from the judgment entered on the verdict of a jury awarding an employee seven months' salary while on leave of absence, or $1,645 and special damages of $5,640 for wrongful dismissal which was double the amount of the claim for one year's salary in lieu of notice.

The plaintiff began work for the Intercolonial Railway on March 21, 1913, and was employed in Halifax continuously until 1928 except for absence during war service in which period the Intercolonial Railway became part of the Canadian National Railways system although it did not lose its identity. After serving at Moncton and Montreal he was in September, 1935, appointed agent of the sleeping and dining car department at Saskatoon. In February, 1938, a serious shortage of supplies was discovered in the plaintiff's department and he was suspended and paid his salary to the end of February. Investigation failed to show that the plaintiff was in any way responsible for the shortage but there had been certain irregularities.

On April 11, 1938, the superintendent at Winnipeg wrote the plaintiff advising that he was being carried as on leave of absence for three months effective from March 1 without pay, with no assurance whether his services would be further used by that department and he was asked to return his annual pass. This leave was several times renewed, covering altogether the period up to the end of September when he was sent a copy of an extract from the report of the general superintendent which made it clear that he was dismissed.

The plaintiff thereupon claimed $235 a month for the seven months on which he was on leave of absence and one year's salary at the same rate as damages for wrongful dismissal. The Court of Appeal held that the question of justification for dismissal was for the jury as the trial judge had decided and

that the onus was on the defendant to prove the dismissal was justified. Further, since there was nothing in the contract as to the period of employment, the law implies an employment from year to year at the most and it would be for the jury to decide whether there were circumstances to override this presumption and hold that the hiring was for a shorter term. But the trial Judge's charge to the jury left it open to the jury to find that the plaintiff was entitled to two years' wages in lieu of notice. A new trial was, therefore, ordered. *Butler v. C.N.R.* (1940) 1 D.L.R. 256.

PRICES IN CANADA AND OTHER COUNTRIES, 1940*

THE movement of prices as indicated by the official figures available for the various countries was in the main upward during the year continuing the advance which commenced with the outbreak of war. Wholesale prices declined somewhat in Canada and the United States during the first half of the year but more than recovered the loss in the second half. In Great Britain there was an increase of about 23 per cent during the year, in Switzerland 22 per cent, New Zealand 12 per cent, South Africa 7 per cent, Canada 3 per cent and in the United States one per cent. In retail prices and the cost of living the advance in Great Britain during the year was about 12 per cent, New Zealand 5 per cent, Canada 4 per cent and the United States about one per cent.

Movement of Retail Prices and Cost of Living in Canada During 1940

The following statement on the movement of the new official index number of the cost of living for Canada is from a bulletin recently issued by the Dominion Bureau of Statistics, *Living Costs in Canada, 1940.*

"The Dominion Bureau of Statistics cost of living index for Canada advanced from 103·8 for December, 1939, to 108·0 for December, 1940. This increase of 4 per cent was mainly concentrated in the latter half of the year when prices for clothing, home furnishings, foods, and coal showed appreciable advances.

"The December, 1940, living cost index was 7·1 per cent above the corresponding index for August, 1939, and materially above the minor peak of 102·9 recorded in November, 1937. However, it remained far below levels of 1929 and 1930 when annual average cost of living indexes were 121·7 and 120·8 respectively. Living costs in these years were representative of the period from 1922 to 1930.

"A Dominion index of retail food prices advanced 4·2 per cent during 1940. This movement occurred between June and December, following a slight decline in the first half of the year. The December, 1940, food price index of 109·1 compared with earlier indexes of 103·8 in June and 104·7 in December, 1939. Butter, eggs, and meats were mainly responsible for the rise in the food group. The autumn seasonal increase in egg prices was slightly greater than in 1939, and December, 1940, butter prices were about 8 per cent above corresponding 1939 levels. Late summer advances in the retail price index for meats were partially cancelled by declines in the final three months, leaving the December, 1940, index for meats only 3·9 per cent above the corresponding December, 1939, index. One of the few important foods to record a net decline for 1940 was potatoes. A December, 1940, index for potatoes was 10·9 per cent lower than the December, 1939, figure.

"Higher prices for coal and coke carried the Dominion index for fuel and lighting up from 105·4 in December, 1939, to 108·5 in December, 1940. This group index was one of the few which was not substantially lower in 1940 than in 1929 and 1930.

"A Dominion index for rents of wage-earner family dwellings increased moderately from 104·4 at the end of 1939 to 107·7 at the end of 1940. Control of rentals in areas most affected by the war effort minimized variations in regional movements.

"Clothing price increases in 1940 were sharper than those in any other principal budget group, and the December, 1940, index of 113·5 for clothing was 9·9 per cent above the corresponding index for December, 1939. Men's clothing was more affected than other groups due to the greater importance of wool in its manufacture. The advance in footwear prices was less than 5 per cent.

"The broad group of home furnishings and services, including furniture, hardware, bedding, floor coverings, etc., advanced 6·3 per cent during 1940 which was a greater than average rise. Bedding and floor coverings recorded the sharpest increases in this group, but advances in other sections were fairly general.

"Miscellaneous living needs showed less change on the average, than other groups commented on above. The increase of less than one per cent in the miscellaneous index during 1940 was influenced by higher costs for tobacco."

Table I gives the new official index for Canada on the base average prices in the period 1935 to 1939 as 100 issued by the Dominion Bureau of Statistics. Monthly and annual figures are given for the six years 1935 to 1940 inclusive. Table II gives the index of the cost of living in Canada by years for the period 1913 to 1940. For the period 1913 to 1934 the former series, on the base average prices in 1926 as 100, was converted to the base average prices in the period 1935 to 1939 as 100.

* The Dominion Bureau of Statistics issues reports on prices with comprehensive figures, as follows: weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and other countries).

For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935–1939=100.

Retail Commodity Prices

The retail price of beef averaged higher in 1940 than in the previous year. The price of sirloin steak in December, 1940, was 29·9 cents per pound as compared with 27·6 in December, 1939. The marketing of cattle was at a higher level than in the preceding year and prices also were considerably higher. The marketing of hogs was much higher in 1940 than in the previous year and the prices were somewhat lower. Exports of bacon to Great Britain were increased in 1940 over those for 1939 and a further increase was indicated as a result of a new agreement reached in October, 1940, though the prices agreed upon were lower. The retail price of fresh leg of pork averaged 23·2 cents per pound for 1940 and 23·7 cents for 1939. The price of breakfast bacon was 29·6 cents per pound and 30·6 cents respectively for the same years. Lard declined gradually during the year from 26 cents in December, 1939, to 21 cents at the end of 1940.

Egg prices were considerably higher in November and December, 1940, than for the same period in 1939 but differences were not great in the other months. Shipments to Great Britain were in greater volume than in the preceding year. The price of milk was unchanged from January to October at an average price of 11 cents per quart but increased fractionally in November when increases were reported from several cities.

The production of creamery butter during 1940 was somewhat less than in the preceding year and with the increased consumption stocks in storage at the beginning of 1941 were about 20 per cent lower than at the beginning of 1940. The price at the beginning of December, 1940, was 34·9 cents per pound as compared with 26·4 cents in July, 32·7 cents for December, 1939, and 26·1 cents in July, 1939. By an order of the Wartime Prices and Trade Board effective December 27 (Labour Gazette, January, 1941, page 5) the maximum wholesale price of butter of any quality or grade was fixed at the wholesale price prevailing in each locality for that quality or grade on December 12. The maximum price was expected to apply until toward the end of the winter season when the situation would be reviewed.

The price of cheese was at a relatively low level before the outbreak of war at 21·5 cents per pound at the beginning of August and September, 1939. By March, 1940, the price had risen to 26·5 cents since when there was a gradual decline to 23·4 cents in December. Exports to Great Britain were in greater volume and production increased considerably over that for 1939.

The price of bread was unchanged in the average from March to December, 1940, following a slight advance at the beginning of the year from an average of 6·5 cents per pound during the last seven months of 1939. The price of flour changed little during the year at prices slightly higher than in the autumn of 1939. The average for 1940 was 3·5 cents per pound as compared with 3·1 cents in 1939.

When an increase in bread prices was threatened following the imposition of a processing tax on wheat of 15 cents per bushel equivalent to 70 cents per barrel of flour for domestic consumption the Wartime Prices and Trade Board, effective August 7, ordered "that the maximum prices of flour and bread would be in the case of bread the prices prevailing on July 23, prior to the imposition of the tax and in the case of flour the prices of that date plus 35 cents per barrel." (Labour Gazette, August, 1940, page 756.) The order, in the nature of a standstill order to protect the consumers while the effect of the tax was being studied, was rescinded on September 6 (Labour Gazette, September, 1940, page 889) when after investigation the Board found that the average profits indicated from milling flour for domestic consumption were less than the amount of the levy imposed by the order. As the price of the flour with the tax included was no higher than during the first four months of the year the Board could see no justification on that account for an increase in the price of bread.

The only change during the year in the price of sugar was an advance in the Dominion average from 7·1 cents per pound to 7·5 cents after May 1 following an advance of 35 cents per 100 pounds in the wholesale price due to an increase in the basic price paid to producers through the Canadian Sugar Administrator and the United Kingdom Sugar Controller.

The 1940 potato crop was reported to be about 12 per cent greater than in 1939 when the total was somewhat below normal. Some decline in prices was recorded in the autumn of 1940 when the new crop was marketed. The Dominion average price in December, 1940, was $1.40 per 100 pounds as compared with $1.90 to $1.95 from March to June and $1.64 in December, 1939.

The price of United States anthracite coal advanced from an average price of $14.07 per ton at the outbreak of war to $14.90 by December, 1939. Little change in the average was recorded during the first five months of 1940. By the beginning of July the price had advanced to $15.50 per ton and by December was $15.76. Factors in the advance since the outbreak of war were the premium on United States funds, higher prices at the mines and the war exchange tax of 10 per cent on imports from non-empire countries. The price of coke rose from $12.18 per ton in the average for January to $12.73 for December.

Rent for workingmen's houses rose in a number of localities particularly those into which there was a movement of people due to increased military, industrial, or other activity arising chiefly out of the war. The powers of the Wartime Prices and Trade Board were extended by an Order in Council dated September 11, to include control over rentals (Labour Gazette, September, 1940, page 889). The Board was empowered to fix maximum rentals and to appoint local committees in designated areas to investigate and adjudicate upon local complaints as to housing and rentals. On September 24 the Board ordered that rental rates in effect in certain designated areas on January 2, 1940, be maximum, (Labour Gazette, October, 1940, page 995). This order affecting 15 localities on October 1 was extended later to six additional areas. The localities in the list for which rental figures are published in the Labour Gazette affected by the original order are, Sydney, New Glasgow, Halifax, Thetford Mines, Ottawa, Kingston, Windsor, Brandon, Vancouver, Victoria and by later order New Westminster, Nanaimo and Prince Rupert.

Cost of Living Index for Canada

In September, 1940, the Dominion Bureau of Statistics commenced publication of a new official index number of the cost of living for Canada on the base of average prices in the period 1935 to 1939 as 100 in a bulletin "An Official Cost of Living Index for Canada". A short description of the index with summary tables was published in the Labour Gazette for October, 1940, in a special article. Publication of the new index has been continued each month since. The figures as to the weighting system are now available in detail.

This index constructed by the Bureau in consultation with the Department of Labour and the Wartime Prices and Trade Board replaces that on the base of prices in 1926 as 100 formerly published by the Bureau and that published by the Department of Labour on the base 1913 as 100.

The latter index based to some extent on the weekly cost of a list of staple foods, fuel, and rent entering into a family budget for which figures were published since 1911, was constructed to represent approximately the changes in all items including clothing and sundries, as well as food, fuel and rent, pending a cost of living survey from the results of which a complete system of weighting could be made. It was designed to show changes in the cost of living for workingmen. The cost of living index of the Dominion Bureau of Statistics, on the base of prices in 1926 as 100, was to measure the general movement of retail prices and the cost of living in the Dominion as a whole and for comparison with

other general index numbers such as the index for wholesale prices.

The cost of living survey forming the basis of the new index number covered the expenditure of 1,439 families of wage earners and low salaried workers with earnings between $450 and $2.500 in the year ended September, 1938, except in the case of foods for which group, the budget quantities were computed from weekly records of expenditure secured at certain times in 1938 and 1939. A survey of this kind had been urged upon the Government by labour and other organizations and was in conformity with a recommendation of the Conference of British Commonwealth Statisticians, held at Ottawa in 1935, that surveys should be made in each country of the Commonwealth where a cost of living enquiry had not been conducted in recent years. This action was also in accordance with a resolution of a Conference of Official Labour Statisticians called by the International Labour Office at Geneva in 1925.

The new index number is constructed by calculating the cost in terms of the prices at the beginning of each month of a list of commodities and services using quantities for each item proportionate to the average annual consumption per family ascertained in the cost of living survey. For each group of commodities the list includes a number of representative staple articles in common use for which reliable and comparative prices can be obtained regularly. Goods which are not available every month cannot be included in a calculation designed to show monthly changes, and some lines of seasonal goods, especially in fruits and vegetables, are therefore necessarily excluded. The list used must, therefore, in as far as is possible, include articles which show at least the general trend of the prices of the goods not included. It is comparatively easy to construct a budget of family expenditure representing all varieties of goods available at any particular date or season in the year and to compare the cost with that on the same date in a previous year but such an extensive budget, including seasonal goods, cannot be made comparable from month to month or even at quarterly or half-yearly intervals.

Procedure in Establishing Index Budget

The following paragraphs as to the purpose of the index and the procedure adopted in establishing the budget used as a basis for its calculation are from a bulletin issued by the Dominion Bureau of Statistics *Living Costs in Canada, 1940*.

"This new index of living costs has been designed to provide an official record of movements in the general cost of living of urban wage-earner families in Canada. The budget upon which it is based remains unchanged from month to month and year to year, taking no account of fluctuations in income levels due to changes in wages and direct taxation. However, it reflects movements in sales taxes which affect the cost of items in the budget. It is the purpose of the index to measure changes in the cost of maintaining a constant budget over a considerable period of time.

"The cost of living index budget has been established from expenditure records secured especially for this purpose in 1938. The Bureau made every effort to ensure that the family expenditure records collected in 1938 came from families which were typical. Before the records were obtained a careful study of 1931 census data was made to discover the main characteristics of typical urban families. The results of that study led the Bureau to concentrate upon securing expenditure records from families satisfying the following conditions:

1. Husband and wife living in the home as joint heads, with from one to five children.
2. Self-supporting during the survey year, with family earnings ranging from $450 to $2,500 during that period.
3. Living in self-contained dwelling units, not sharing either kitchen or bathroom facilities with other families.

"A special preliminary canvass of 12 cities chosen for the 1938 survey was made to locate families meeting the above requirements. Approximately 50,000 homes were visited in this preliminary stage of the survey, and from the returns sent in by the field staff, the Bureau sorted out the families which were satisfactory according to the criteria noted above. From this list a random group of families was approached for complete annual records of income and expenditure. Each family provided a detailed account of expenditures in the year ending September, 1938, and in addition kept a journal of individual food purchases in three separate weeks, the first in October—November, 1938, the second in February, 1939, and the final one in June, 1939. The food index budget quantities were computed from these weekly records. The cities included in the 1938 survey were Charlottetown, Halifax, Saint John, Quebec, Montreal, Ottawa, Toronto, London, Winnipeg, Saskatoon, Edmonton, and Vancouver.

"The 1,439 families for which records were collected, averaged 4·6 persons, and the majority had two or three children. Family earnings in many cases were supplemented by other small sources of income, and total family incomes between $1,200 and $1,600 were the most common. There were approximately two

tenant families to every home-owning family, and about one family in three operated a motor car. The general distribution of living expenditures for these families which represented all the principal racial groups in Canada was as follows:

URBAN WAGE-EARNER FAMILY ANNUAL LIVING EXPENDITURES
(Year ending September 30, 1938)

Budget Group	Expenditure Averages	Percentage Distribution
	$	
Food	443·0	31·3
Shelter	269·5	19·1
Fuel and Light	90·5	6·4
Clothing	165·8	11·7
Home Furnishings	125·7	8·9
Miscellaneous	319·4	22·6
Health	60·8	4·3
Personal Care	23·9	1·7
Transportation	79·3	5·6
Recreation	82·1	5·8
Life Insurance	73·3	5·2
Total	1,413·9*	100·0

* Directly represented in the index. Other miscellaneous outlay brought total family living expenditure to $1,453·8.

"In selecting a new period to replace 1926, the Dominion Bureau of Statistics had to consider many types of indexes other than those for prices. Employment, industrial production, and car loadings were some of the series involved, and it was difficult to find a recent 12-month period which would provide a generally satisfactory reference level. For both prices and industrial production the years 1935-9 offered a period of rise and fall which tended to minimize differences in the base levels of various series relative to earlier periods. Although prices in the last four months of 1939 were affected by the outbreak of war, neither prices nor industrial activity reacted sufficiently in that interval to affect a five-year average materially. The years 1935-9 provide a base which is representative of pre-war conditions, and at the same time give a reference level for comparison with average conditions obtaining subsequent to recovery from the depression from 1929 to 1933. The 1935-1939 period had previously been selected by the United States Central Statistical Board for the calculation of revised index numbers for the United States.

Composition and Construction of Group Indexes

The index for the food group is calculated from the prices of 46 items secured in reports for the beginning of each month from about 1,600 grocers and butchers in 69 cities, both chain and independent stores being represented. The Dominion average price for each of the 46 items is multiplied by its appropriate quantity as shown by the survey and the aggregate of these products is divided by the corresponding aggregate for the base period.

It is stated that there are two tenant wage-earner families for each home-owning wage-earner family and the index is made on the assumption that housing costs generally are reflected in rental trends. Enquiries of rental agents are made in May and October in 61 cities as to the rates for workingmen's dwellings, houses, flats and apartments. An index for each of these three types of dwellings is made and these are combined in the proportion of 70 for houses, 15 for flats and 15 for apartments to give the group index. These proportions of course would vary from city to city. For example in Montreal flats are more numerous than other types of dwelling and in Toronto houses are the predominant type.

The index for the fuel and the light group is calculated similarly to that for rent, from data secured each month, an index being made for each of three types of fuel, coal, coke and gas as well as for electricity. Wood is not included, tests computing fuel indexes with and without wood showed only slight differences even though it is an important fuel in some localities. Account is taken of the different kinds of coal in different areas, the Maritime Provinces burning chiefly Nova Scotia coal, Quebec and Ontario mainly British and United States anthracite, the Prairie Provinces mainly Alberta coal and British Columbia its own bituminous coal. Account is also taken of the amount of each of the fuels and electricity which is typical of consumption in each area. The index for coal is made from data from 58 cities; the coke index from 26 cities in Ontario and Quebec; the gas index 16 cities in all parts of the Dominion; and the index for electricity includes data from 109 urban communities in Canada. The indexes for each of the four items are combined to produce the index for the group by giving coal a weight of 42 per cent, coke 11 per cent, gas 14 per cent and electricity 33 per cent.

In the clothing index there are 31 items of men's and women's wear as well as piece goods selected to reflect changes in clothing prices and to represent the basic materials used in clothing in about the same proportions as they would appear in a complete clothing budget. Some of the items chosen form only a small part of a complete clothing budget but are useful in measuring the trend of clothing prices because of their standard manufacture. Some items of considerable importance are omitted such as children's clothing and certain items of adult wear owing to difficulties of securing continuity in prices due to changes in quality and style. The Bureau has reduced its clothing list, having ascertained by tests

that 31 accurate price series will measure the trend of clothing prices better than a large list including items which fluctuate widely in price due to style and seasonal factors. There are four sub-groups and an index is made for each from the sum of the products obtained by multiplying the current price average for each item by its budget quantity and dividing this sum by the corresponding aggregate for the base period. These sub-groups are combined in the proportion of 41 per cent for men's wear, 36 per cent for women's wear, 4 per cent for piece goods and 19 per cent for footwear to give the index for the group. Clothing prices are secured monthly chiefly from department stores in eleven cities.

The home furnishings and services group is made up of eight sub-groups including laundry and telephone services with six sub-groups of home furnishing items. The prices of the

home furnishings items are secured monthly mainly from department stores in eleven cities. Laundry and telephone rates are secured from 23 cities the former annually and the latter monthly. A comparatively small number of carefully selected furnishing items is included in the index which adequately represent the entire group. The method of calculating the index is similar to that for clothing.

Five sub-groups, health maintenance, personal care, transportation, recreation and life insurance are included in the miscellaneous group. Certain other items of expenditure such as church contributions, bank savings, charity, etc. are not represented but in the 1938 survey these amounted to only about three per cent of the average wage-earner family living expenditure. Statistics for most of the items in the group are collected from 23 of the larger cities chosen to give adequate regional representation. In view of the stability of fees for doctors, dentists and hospitals these records are collected only at annual intervals and medical supplies quarterly.

Table III gives the items in detail used in the index together with the weights. The following paragraph as to the weighting system is from the report issued by the Bureau:

"There are two stages in the calculation of each of the six principal group indexes from which the composite number is calculated. In the first stage, the general procedure is to multiply current price averages by budget quantities. These products are added together and the resultant aggregate divided by a corresponding base period aggregate. The resultant number is multiplied by 100·0 to secure a sub-group index for the current period. This index is then multiplied by a sub-group weight indicative of the cost of goods in this sub-group relative to all goods in the group. When all sub-groups have been weighted similarly, the group index is found by adding up this second set of products and dividing by 100·0. This routine is repeated to secure the final composite cost of living index. The second and third stages of weighing are made necessary by the fact that it is not feasible to include all items in the family budget."

Food Index Numbers for Certain Cities in Canada

The Dominion Bureau of Statistics has recently issued a bulletin City Index Numbers of Retail Food Prices 1935 to 1940 and these are given in the accompanying table IIIA. The list of foods used in the calculation is the same for all cities being that used in the calculation of the index for the food group for the Dominion as a whole. The quantities of the various foods shown in Table IIIB, vary from city to city reflecting differences in the purchases of wage-earner families in each of the eight cities as shown by the cost of living survey 1938 and 1939. Complete cost of living indexes for each of these cities will be published when available.

Wholesale Prices in Canada, 1940

The accompanying table IV gives the wholesale prices of certain important commodities, while tables V, VI, and VII show the index number of wholesale prices in Canada calculated by the Dominion Bureau of Statistics, the commodities being arranged according to "chief component materials" in table V, "purpose" in table VI and "origin" in table VII.

This index moved within relatively narrow limits during 1940 the low point being 81·6 reached in June and the high 84·2 reached in December. The upward movement following the outbreak of war in September, 1939, was continued during the first quarter of 1940 but by June, 1940, the index had declined to about the same level as in December, 1939. From June to the end of the year the index advanced month by month being about three per cent higher in December, 1940, than in December, 1939, and about sixteen per cent higher than in August, 1939. The advance in the index following the opening of hostilities was due mainly to increases in the prices of a few commodities namely; grains, milled products, sugar, butter, cheese, fresh meats, textiles, pulp, newsprint, non-ferrous metals, scrap iron and steel and the subsequent decline was most pronounced in the prices of certain farm products mainly grains, milled products, hides, butter and cheese. The increase since June, 1940, was due mainly to higher prices for live stock, hides, butter, eggs, raw textiles, lumber, raw rubber, and paint materials. Raw and partly manufactured goods advanced 2·7 per cent during the year and 21·3 per cent since August, 1939. Fully and chiefly manufactured goods advanced 2·6 per cent and 14·3 per cent in the same comparison. In the classification according to chief component materials, increases ranged from 3·1 per cent for the Fibres, Textiles and Textile Products Group to 7·3 per cent for the Wood, Wood Products and Paper Group. The Vegetable Products group was the only group to decline being down 1·7 per cent. In a bulletin, *Price Movements in 1940,* issued by the Dominion Bureau of Statistics, it was stated that the increase during the year reflected new taxation on imports for non-war purposes, and a processing tax of 15 cents per bushel on wheat milled for domestic consumption while "in addition an 11 per cent exchange premium had obtained on all import settlements in terms of New York funds or related currencies since September, 1939."

TABLE IIIA.—DOMINION BUREAU OF STATISTICS INDEX NUMBERS OF RETAIL FOOD PRICES FOR EIGHT CITIES IN CANADA, 1935-1940

Average prices in 1935-1939=100

Prices in Great Britain and Other Countries

The accompanying tables numbered VIII to XXII give such index numbers of retail prices of foods and cost of living and of wholesale prices in several of the principal commercial and industrial countries as are available for 1940 and for preceding dates, to show the movements of prices in comparison with those in Canada. The information in the following tables is obtained for the most part from publications of the governmental or other authority constructing the index number, but in some cases from the Monthly Bulletin of Statistics of the League of Nations, which publishes figures for some countries. The quarterly supplement to Prices and Price Indexes issued by the Dominion Bureau of Statistics, Ottawa, also contains index numbers for many countries.

As a result of war conditions the information for certain countries is not as complete in the present report as heretofore, there being no data for some countries since September, 1939. From some other countries the information is received later than previously.

Great Britain and Northern Ireland

Cost of Living.—The Ministry of Labour's index number (Table X) is based on the standard of living of a workingman's family prior to the outbreak of war in 1914. The cost of living, on this basis, at the end of November, 1940, had risen about 26 per cent over the September 1, 1939, level. Food prices had risen 25 per cent. As the war progressed, maximum prices of an increasing number of foods were set by the Minister of Food. Of the rise of 26 per cent in the cost of living, 1·8 per cent was due to taxes on sugar, tobacco, cigarettes and matches, and a further 1·1 per cent resulted from the Purchase Tax. (This tax which became effective October 21, is levied when the goods pass from the wholesaler to the retailer and is at the rate of one third of the wholesale value of certain classes of goods and one sixth of the wholesale value of certain other classes of goods. The only items used in compiling the cost of living index number which are subject to the purchase tax are clothing, clothing material, domestic ironmongery and pottery, and the tax is not chargeable on garments or shoes for young children's wear. This tax was not immediately felt by consumers as it did not apply to stock held by retailers at that time.) Clothing prices rose steadily from the beginning of the war and had increased by about 54 per cent in these sixteen months. The fuel and light and the sundries groups each were about 22 per cent higher at November 30, 1940, than at September 1, 1939, while rent had only increased by one per cent.

Wholesale Prices.—The Board of Trade index number of wholesale prices showed a rise of 24·7 per cent in wholesale prices in the first four months of the war, the increase in food and tobacco (30·6 per cent) being greater than that for industrial materials and manufactures (21·6 per cent). During the year 1940 there was a further increase of 21·2 per cent, the increases in the food group and in the industrial materials and manufactures group being about equal. Thus, from August, 1939, to December, 1940, the total increase for all groups combined was 51·1 per cent, the advance in food and tobacco prices being 58·5 per cent, and in industrial materials and manufactures, 47·2 per cent.

The rise of 30·6 per cent in food and tobacco prices between August and December, 1939, was made up of an increase of 54 per cent in cereals, one of 24½ per cent in meat, fish and eggs, and one of 21 per cent in "other food and tobacco". In the year 1940, however, the increase in the "other food and tobacco" was 31 per cent, more than twice as great an increase as in the cereals group and in the meat, fish and eggs group. Among "other foods and tobacco", the rise in vegetables and fruit was outstanding, the prices of tomatoes, onions, apples, oranges and bananas being from 70 to nearly 300 per cent higher in December, 1940, than in December, 1939. Price control was instituted for oranges, onions and bananas in the latter part of the year. Potatoes were 50 per cent higher in December, 1940, than a year earlier, milk about 40 per cent; butter was practically unchanged due to price control, but margarine and imported cheese rose about 20 per cent; tea and cocoa showed little change, but coffee was 20 to 40 per cent dearer. Increased duties on tobacco resulted in a price rise of between 40 and 50 per cent, cereals rose about 14 per cent during the year due to higher prices for barley, maize and rice. Meat and bacon prices were controlled and there was no change after February, 1940, except poultry which was 50 per cent higher; the price of eggs was also controlled throughout the year, the prices in December, 1940, being 45 per cent higher than a year earlier.

The rise of 21·6 per cent in industrial materials and manufactures between August, 1939, and December, 1939, and the further rise of 21 per cent during 1940, amounted to a total increase of 47·2 per cent for the whole period. Price control was in effect for a number of commodities, the prices under control being changed from time to time. In the whole period prices of coal advanced 29·7 per cent, iron and steel 39·4 per cent, non-ferrous metals 22·4 per cent, cotton 57·5 per cent,

(a) Average for year. (b) First of month. (c) 15th of month. (d) End of month. (e) New series. (g) Until end of 1927 "Dr. Lorenz." (h) Prior to 1926, the number of commodities was 236, from January 1926 to December 1933, 502, and since January 1934, the number is 567.

wool 62·8 per cent, other textiles 48·9 per cent, chemicals and oils 31·8 per cent, miscellaneous commodities 68 per cent.

United States

Cost of Living.—The Bureau of Labour Statistics revised indexes of the cost of goods purchased by wage earners and lower salaried workers in large cities is shown in table XXI. This records an increase of only 1·1 per cent between December, 1939, and December, 1940. There was an increase of 2·4 per cent in food prices and a decrease of 2·2 per cent in furniture; other groups showed changes of only a fraction of one per cent.

Wholesale Prices.—In spite of the great increase in industrial activity, the price level remained practically stable throughout the year. The index number of the Bureau of Labour Statistics (Table XXII) was one per cent higher in December, 1940, than in December, 1939. There was a gradual decline amounting to 2·5 per cent between January and August, 1940, which was regained during the last four months of the year. Comparing December, 1940, with December, 1939, farm products were 3·1 per cent higher, textile products 4 per cent lower, building materials 6·8 per cent higher, and other groups showed lesser changes.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME XL] MARCH, 1940 [NUMBER 3

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A further contraction in industrial employment was noted at the beginning of February, according to returns received by the Dominion Bureau of Statistics from 11,857 firms, each with a minimum of fifteen employees. The staffs of these firms at February 1 aggregated 1,117,761 persons, as compared with 1,135,619 at January 1. The crude index, based on the 1926 average as 100, declined from 116·2 at January 1 to 114·4 at the beginning of February, when it was higher than at midwinter in any other year for which statistics are available. At February 1 in preceding years, the index was as follows:—1939, 106·5; 1938, 110·4; 1937, 104·1; 1936, 98·4; 1935, 94·6; 1934, 91·4; 1933, 77·0; 1932, 89·7; 1931, 100·7; 1930, 111·6; 1929, 110·5; 1928, 102·0 and 1927, 96·6.

The movement at February 1 in 1939 and 1938 had also been downward; however, in the years, 1929-1937, upon whose experience the factors of seasonal adjustment are computed, employment showed practically no change between January and February. At the date under review, there was therefore a reduction in the seasonally-corrected index, which fell from 120·7 at January 1, to 118·8 at the beginning of February; this was the highest adjusted index for that date in the twenty winters for which statistics are now on record.

Unemployment in Trade Unions.—At the beginning of February, 1940, the percentage of unemployment reported to the Department of Labour by local trade unions throughout Canada stood at 11·3 as compared with percentages of 11·4 at the beginning of January, 1940, and 15·9 at the beginning of February, 1939. The February percentage was based on the reports received from the 2,024 labour organizations involving a membership of 256,550 persons.

Employment Office Reports.—Reports received from the offices of the Employment Service of Canada indicated a slight increase in the volume of business transacted in January, 1940, when a comparison was made with the preceding month, but a substantial decline from January a year ago, these computations being based on the average daily placements effected during the periods under review, services recording the highest gain under the first comparison and farming and construction and maintenance the greatest losses under the second. Vacancies in January, 1940, umbered 26,935, applications 70,466, and placements in regular and casual employment 25,400.

Prices.—In retail prices the cost per week of a list of staple foods, fuel and lighting, and rent entering into a family budget was $17.71 at the beginning of February as compared with $17.67 for January; $17.06 for February, 1939; $17.39 for February, 1938; $15.41 for June, 1933 (the low point in recent years); $22.12 for February, 1930; $21.07 for February, 1922; and $26.92 for July, 1920, the post war peak. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 advanced slightly during the month and was 82·8 for the week ended March 1 as compared with 82·2 for the week ended February 2 which was the same as for the wek ended December 29, 1939. Comparative figures on a monthly basis are 82·6 for January, 1940, the last month for which the figures are available; 73·2 for February, 1939; 83·6 for February, 1938; 82·9 for February, 1937; 63·5 for February, 1933 (the low point in recent years); 93·9 for February, 1930; 98·3 for February, 1922; and 164·3 for May, 1920, the post war peak.

Business Statistics.—The table on page 192 gives the latest statistics available reflecting industrial conditions in Canada. The index of the physical volume of business was about four per cent higher for January, 1940, than for December, 1939, and about 23 per cent higher than for January, 1939. In the former comparison the increase was due mainly to the greater volume of mineral production and of manufacturing indicated by the figures for these two groups. In mineral production advance was indicated for copper, zinc, silver and coal while in manufacturing improvement was indicated by the figures for foodstuffs, newsprint, lumber and shingles, iron and steel, and automobiles. The construction group re-

* Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† For the week ended March 1, 1940.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending March 2, 1940, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending February 24, January 27, 1940, and December 30, 1939; February 25, January 28, 1939, and December 31, 1938. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation. (9) Excluding gold.

corded a decline, both contracts awarded and building permits being lower. The output of electric power was slightly higher and there was also a fractional advance in distribution due to increases in car loadings, as well as in external trade. All of the above named principal groups were higher in the month under review than in January, 1939. Information available for February shows advance in wholesale prices, the number of cars loaded, the value of contracts awarded and the earnings of the Canadian National Railways as compared with the previous month.

Strikes and Lockouts.—The number of strikes and lockouts during February was 14, involving 3,161 workers with time loss of 14,687 man working days, as compared with six disputes during January, involving 919 workers and causing time loss of 6,861 days. Most of the time loss in February was due to strikes of coal handlers at Toronto, Ont., gold miners at Pioneer Mines, B.C., coke oven workers in a steel plant at Sydney, N.S., and salt miners at Malagash, N.S. In January the only important disputes involved gold miners above mentioned and electric wire workers at Brockville, Ont.. In February, 1939, there were eight disputes, involving 2,622 workers and causing time loss of 24,098 man working days, nearly all of which was due to strikes of rubber workers at Kitchener, Ont., coal miners at Blairmore, Alberta and at Cumberland, B.C. Of the fourteen disputes recorded for February, 1940, twelve were terminated during the month, six resulting in favour of the workers involved, four resulting in compromise settlements and the results of two being recorded as indefinite. Two disputes, involving approximately 248 workers, were recorded as unterminated at the end of February. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the past month the Minister of Labour received the findings of the Board of Conciliation and Investigation which dealt with a dispute between Mr. F. W. Nicholas and the checkers, porters, coopers, etc., in his employ at Port McNicoll, Ontario.

Three applications for the constitution of boards were received in the Department of Labour and two boards were established, while the personnel of a board established during the preceding month was completed.

Details of proceedings under the Industrial Disputes Investigation Act and the text of the board's findings will be found in the section commencing on page 198.

Statistics of Relief Recipients for January

The grand total of all classes of persons on urban and agricultural relief across Canada in January of this year was 712,000. Figures dealing with numbers of persons on direct relief, released by the Honourable Norman A. McLarty, Minister of Labour, are the preliminary results from the registration of all direct relief cases, carried out for the Department of Labour by the provinces and municipalities in January. The grand total for January, 1940, compared with the same month of 1939, showed a decrease of 27 per cent, while compared with January, 1938, the Dominion figure was down by 30 per cent: both urban and agricultural relief showed decreases from a year ago. In January the total number of relief recipients invariably shows an increase over the previous month, December, and in 1940 this increase was 13 per cent over December, 1939; in January, 1939, the increase was 8·9 per cent over December, 1938.

Unemployed but fully employable persons on relief in January this year numbered 163,000, an increase of 11·3 per cent from the revised December total, compared to an increase of 11·7 per cent from December, 1938, into the following January. The figure for January this year showed a decrease of 10·1 per cent from January a year ago, and a decrease of 3·3 per cent from January, 1938.

A total of 618,000 persons were receiving non-agricultural relief in January, an increase of 11·0 per cent from the corrected figures for the previous month: January, 1939, had shown a 10·5 per cent increase over December. This category includes all totally unemployable, partially employable and fully employable persons together with all dependents of family heads. This aggregate showed a decrease of 7·5 per cent from the figure for January, 1939, and a decrease of 2·2 per cent from the figure for January two years ago.

The Dominion total on agricultural relief continued to show a major decline from the year before, following improved crop conditions in 1939 in the Prairie Provinces. A total of 20,000 farmers who, together with their dependents, accounted for a farm population of 94,000, were reported as receiving agricultural relief for subsistence in January. The Dominion total on agricultural relief in January increased by 28·6 per cent from the revised December figure, but was 69·5 per cent lower than in January, 1939, and 75·5 per cent less than in January, 1938. Figures for Saskatchewan for January showed an increase of 39·7 per cent from the reduced total for December, 1939, and decreases of 77·2 per cent and 82·1 per cent from January, 1939,

and from January, 1938, respectively. The Saskatchewan total on agricultural relief still represented 63·8 per cent of the Dominion total.

Registration in Canada for Industrial War Work

As referred to in the LABOUR GAZETTE for January, 1940, (page 3), the offices of the Employment Service of Canada have been conducting in recent months a civilian registration of skilled and semi-skilled workers whose training and experience would seem to qualify them for employment in industries engaged in the production of war materials. The registration has been taken in all provinces, special arrangements having been made in Prince Edward Island where there is no office of the Employment Service. In the previous reference to the matter in the LABOUR GAZETTE, it was stated that the registration had not yet begun in the Province of Ontario as that province had felt that it was desirable to postpone action until the demand for workers for war industries became more pronounced. However, Ontario has now undertaken the registration, commencing late in January.

To date about 25,000 skilled and semi-skilled workers have been registered, of whom 1,100 are female persons; 4,500 of the total were unemployed at the time of registration, while of the 20,500 reported as unemployed when registering, 19,000 were stated to be fully employable and 1,500 to be partially employable.

The registration is still continuing, but already some persons who have filed these special applications with the Employment Offices have been placed in jobs.

Labour measures indicated in Quebec Legislature

The Speech from the Throne opening the Quebec Legislature on February 20 contained a reference to the introduction of new legislation to replace the Fair Wage Act. Other labour and social measures were also indicated as follows:

> Fully aware of our responsibility towards the working classes, we will introduce a minimum wage law to replace the present Fair Wage Act. This law will be complementary to the Collective Labour Agreements' Act which will be entrusted to a commission for study with a view to making thereto any desirable amendments. Two recent acts, which appear to be contrary to the interests of the workmen, will be repealed. We will strengthen our social legislation by setting up a labour council, similar to those which have proved so beneficial in Europe.
>
> Special consideration will be given to the rising generation, which is passing through such difficult times. In addition to the numerous undertakings which we propose to set in motion, we will arrange without delay with the federal government for the renewal of the agreement respecting the Youth Aid Act.

Recommendations of special Manitoba Committee on unemployment

On April 13, 1939, the Manitoba Legislature appointed a Special Select Committee for the purpose of investigating unemployment and the effect of the regulations for the administration of aid upon recipients, upon the public and upon industry and commerce.

This Committee submitted its report to the Legislature on February 22, and its recommendations deal not only with the administering of relief in the province, but also certain national factors.

In the provincial field it advocated that there be no change in the present set-up of relief administration. It considered, however, that the Greater Winnipeg Unemployment Advisory Board "should take into account various unforeseen factors as they may arise and that the present regulations may be amended as may be found necessary due to this country being in a state of war and to the fact also that there may be a rise in the level of commodity prices."

It found that relief allowances "at the present time are adequate to cover the generality of cases, but that the Appeal Board should take all necessary steps to cover individual special cases as the same may come before it." The Committee was of the opinion "that clothing and other articles of personal apparel should be as varied in pattern and style as reasonably possible to avoid relief recipients, and especially school children, being identified by the type of clothing they wear;" that "great care should be taken to get clothing of reasonably good quality and that such clothing and other supplies should, as far as possible, be purchased from manufacturers in the Province of Manitoba and only from such as observe fair conditions of labour employed in their establishments."

It further suggested that "a competent shoe man should be provided to assist recipients in obtaining suitable shoes;" and that adequate facilities be provided to enable recipients to examine and try on their articles.

The Committee recommended to the Federal Government "that as a national policy the principle of a shorter working week be adopted;" and that the age of eligibility for old age pensions be reduced from 70 years to 65 years.

In conclusion the Committee recommended "that the rules and regulations governing material aid be so amended to take care of all unemployed young men and women who are members of families of low and moderate income brackets and that the Advisory Board be requested to set up a schedule under which such cases of young men and women be eligible."

Welfare Plans of Canadian Industries

In the February issue of *Industrial Canada,* official publication of the Canadian Manufacturers' Association, there is given the results of a survey of employees' welfare plans in Canadian industries. These plans have been introduced as a protection against unemployment, old age, sickness, or other forms of disability not already provided for in workmen's compensation legislation. The information obtained in this survey is published in an article entitled "Unemployment Protection Plans" by Mr. G. V. V. Nicholls, of the Industrial Relations Department of the Canadian Manufacturers' Association.

The policy and measures generally adopted by an increasing number of Canadian manufacturers in welfare plans and employment are outlined in the following paragraphs from the article:—

The welfare plans of Canadian manufacturers are of a great variety of types. A substantial number of the members who replied to the circular stated that they had group insurance or an old-age pension plan in force in their plants. Some of the group insurance was life only, some sickness, total disability and accident as well. Some firms not only had group insurance of all these types in force, but had also provided for the payment of pensions upon retirement. Admittedly, however, none of these schemes could properly be classified as an unemployment protection plan. They are a protection against unemployment due to old age, sickness or accident, it is true, but, except to the extent that the policy has a cash surrender or loan value, they are of no assistance to the employable worker who is laid off through economic causes.

The measures adopted by Canadian manufacturers against this latter type of unemployment may for convenience be divided into four: control of production, facilities for loans, a miscellaneous group of what can perhaps be called unemployment benefit plans, and savings schemes.

Many of the Association's members, for whose products there is an uneven demand, attempt to reduce lay-offs by a careful planning of production. Planned production to these companies is not only a pious expression of hope; with them it is a considered policy. They appreciate that even more important for the worker than wage rates per hour or week is the income he earns over a yearly period. The employee paid at a high wage rate is often worse off than his fellow worker who is regularly employed at a lower rate. They try therefore to plan their manufacturing activities in advance so as to insure as uniform a volume of employment as possible throughout the year. Stocks of the finished product are accumulated during slack periods and in the rush season sales will be in excess of production.

A wide variety of welfare plans—ranging from group insurance and old age pensions to thrift and savings programs—is included in the survey. (The well-established plans of several of the companies listed in the article have been summarized from time to time in the Labour Gazette. In particular, the unemployment benefit plan of the Canadian Kodak Company was reviewed in the issue of August 1931, page 894).

Annual Report U.S. Social Security Board

According to the fourth annual report of the United States Social Security Board for the fiscal year ending June 30, 1939, payments during that period to individuals under the provisions of the Social Security Act (Labour Gazette, September 1935, page 801) and related states legislation totalled $987·0 million.

Unemployment Compensation.—During the period reviewed by the report, unemployment benefits totalling $446·1 million were paid in 46 states, the District of Columbia, Alaska and Hawaii. These benefits were paid from funds established by contributions made by employers and in some states by employees under state legislation approved by the Board as within the general framework outlined in the Act. The unemployment compensation program became nation-wide in July, 1939, with the commencement of benefit payments in Illinois and Montana. Federal grants provided $58·8 million for the administration of these laws, including the expansion of state employment services to meet the additional responsibilities they carried in connection with unemployment compensation.

Old-Age Insurance.—During 1938-39 the old-age assistance program was extended in the United States to nation-wide operation, the Federal Government providing approximately one-half of the $411·5 million paid to needy aged persons under plans formulated and administered by the states. These plans are subject to certain safeguards for the use of Federal funds specified in the Social Security Act. Under this program more than two million old people received aid. Lump-sum payments amounting in total to $14·3 million were paid from Federal funds to aged workers covered by the Federal old-age insurance program.

Aid to the Blind and Dependent Children.—By June, 1939, the United States Federal-State program for aid to the blind and also for aid to dependent children were each in effect in 42 of the 51 jurisdictions entitled to participate under the Act.

In 40 states, the District of Columbia and Hawaii, some 51,000 needy blind persons received $11·9 million during the year to which the Federal Government contributed approximately one-half. In the same areas, aid

totalling $103·2 million, of which about one-fourth represented Federal funds, was given to some 366,000 families on behalf of more than 900,000 dependent children who had been deprived of parental support.

Public Assistance.—Of the total ($987·0 million) expended under the terms of the Social Security Act and related state legislation, $526·6 million was paid from Federal, state, and local funds to recipients of public assistance in states collaborating in the program.

Health, Welfare and Vocational Rehabilitation.—Health, welfare, and vocational rehabilitation services were also substantially in nation-wide operation. All of the 48 states and the District of Columbia, Alaska, and Hawaii were availing themselves of the opportunity to use Federal funds to strengthen and extend their public-health services under plans approved by the United States Public Health Service. All states, the District of Columbia, Alaska and Hawaii were administering plans approved by the Federal Children's Bureau for services for maternal and child health and for cripped children, and all but Wyoming were administering plans for child-welfare services. The program for vocational rehabilitation, for which Federal responsibility is assigned to the Office of Education was in operation in 46 states and in Hawaii; under other legislation funds were also provided for this purpose in the District of Columbia and Puerto Rico.

First Annual Report under U.S. Fair Labor Standards Act

The first annual report of the Wage and Hour Division of the United States Department of Labor covering the period ending December 31, 1939, states that experience during the first year of operation indicates that the Fair Labor Standards Act of 1938 (LABOUR GAZETTE, July 1938, page 718), establishing a national "floor for wages and ceiling for hours" is enforceable.

The report outlines briefly the disappearance of the agricultural frontier, the centralization of industry in cities and the earliest legislative enactments for regulating hours of work and wage standards, leading up to the passage of the Fair Labor Standards Act.

The report refers to the mandatory revision of wages and hours which went into effect on October 24, 1939 (LABOUR GAZETTE, November 1939, page 1090) raising the minimum wage to 30 cents an hour and reducing working hours from a maximum of 44 to 42 per week. It shows that 650,000 workers in the United States benefited by the wage increases without any dislocation of employment. It is also estimated that concurrently with the wage increases and the limitation upon hours of work imposed by the statute, 2,400,000 workers had their work week shortened.

The report also refers to the criminal proceedings taken against employers not observing the requirements of the legislation. Fines totalling $247,850 were levied during the year in 37 completed actions in all of which the prosecution was successful. The payment of $132,350 of these fines was conditionally suspended on full restitution by the employers to the employees of wages illegally withheld. A total exceeding $1,000,000 in back payments has been agreed upon as restitution to more than 18,000 employees. Of this sum $250,000 has already been paid. At the time the report was issued 26 cases concerning claims for back payment of wages were pending legal decision.

The report indicates that more than 1,000 complaints a week are currently being received by the Wage-Hour office of the Division whose activities have been decentralized into 15 regions. Slightly more than one-half of the complaints concern overtime rather than minimum wages.

Limited Agenda of International Labour Conference Convening at Geneva on June 5

At the 89th session of the Governing Body of the International Labour Office on February 1-5, it was decided that the 1940 session of the International Labour Conference would open on June 5, at Geneva with the Governing Body convening on June 1. It was considered that the combined meetings of the Conference and the Governing Body should not extend over two weeks.

This decision was the occasion for an extended discussion at the February session of the Governing Body. All speakers favoured the holding of the Conference in Geneva in June, if circumstances permitted, but agreed that the officers of the Governing Body and the International Labour Office should be given authority to change the date or place of meeting if necessary. The advantages of holding the meeting in Geneva were considered by the administration to be of great importance, mainly in the interests of economy, as the holding of the Conference there is considerably less expensive than transferring the necessary organization to another place. It was also thought most desirable that the members of the Conference should, particularly at this time, be in touch with the offices and staff of the organization at Geneva and with the work in progress. It was noted that the Havana Conference had suggested that it

might be held in an American country, but it was felt, at least by the Director, that the holding of this Conference in America made it desirable to hold the next Conference in Europe.

In accordance with instructions from the Ministry of Labour, the Canadian representative pointed out that Canadian participation in the Conference must be contingent on compatibility with the primary obligations of national defence.

The question of the agenda of the Conference was also discussed at length and it was decided that the agenda should be limited to the usual routine items, the discussion on the Director's report and one other subject. The subject chosen was "Methods of Collaboration between Public Authorities and Employers' and Workers' Organizations."

Two other subjects suggested by the Office were:

(*a*) Wage Policy in relation to Price Changes.
(*b*) Social Policy and Social Legislation in relation to the Family.

It was decided to put these two subjects on the program of work of the International Labour Office, but not on the agenda of the Conference.

Annual Report of United States Secretary of Labor

The twenty-seventh annual report of the United States Secretary of Labor covering the activities of the Department of Labor in the fiscal year ending June 30, 1939, has recently been received.

The report states that for the wage earners of the United States the fiscal year was one of substantial improvement. Opportunities for employment were more numerous, wages increased, maximum hours of labor decreased, physical conditions of work became safer and more healthful. These and other benefits are the cumulative result of the comprehensive economic and social program which was launched in 1933. "They are corollaries" the report declares, "of the general expansion in business production and distribution contingent upon the 6 years' operation of this program."

Total non-agricultural private employment, as of June, 1939, was 33,500,000 compared to 26,100,000 in March, 1933. In other words, 7,400,000 more persons were employed in this class of jobs in June, 1939, than 6 years ago and 1,253,000 more than were employed during this same month in the fiscal year of 1938. Weekly factory pay rolls increased from $72,697,000 as of March, 1933, to $164,089,000 as of June, 1939, a rise of $91,392,000, with the increase for June of this fiscal year over the corresponding month last year amounting to $29,138,000 weekly. The trend also indicated that employment and pay rolls would continue to rise through the fall months. Building construction of all kinds, which stimulates employment in many other lines, jumped from value of $3,000,000,000 in the calendar year 1933 to $6,500,000,000 in 1938, and from figures available it is estimated it will rise $500,000,000 to $1,000,000,000 more in the 1939 calendar year.

These concrete figures, the report states, show direct economic gains made since 1933, "which have been accompanied by social advances made through legislation designed primarily to benefit the wage earner but also in the public interest, and the combination has operated to promote the general well-being of this generation and those to come."

Old Age Pension Program in Great Britain

The British Government's old age pension program was recently outlined in the House of Commons by Sir John Simon, Chancellor of the Exchequer, who indicated that the plan will lower the pension age for women from 65 to 60 and give supplementary allowances to about 275,000 aged persons.

The bill calls for an unemployment assistance board, supervised by the Minister of Health in England and Wales, and the secretary for Scotland, in Scotland. The family means test is to be replaced by an examination on a basis of simple household needs under the new measure.

Replying to Labour Opposition criticism, Mr. Walter Elliott, Public Health Minister, stated in part:

"In July all local authorities of England and Wales, with the support of all local authorities in Scotland, made a demand that the pension should be made adequate, so that old people should not in the future have to rely upon public assistance.

"That representation has been met by the provisions of this financial resolution. The demand of the local authorities was that the burden of supplementing old age pensions should be lifted from their shoulders."

97325—2

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THREE applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour recently as follows:—

(1) From 34 employees of the Quebec Power Company being operators, linemen, patrolmen and metermen, members of Local Union "B" 1106, International Brotherhood of Electrical Workers. The employees request deletion of certain words in the clause of the agreement relating to overtime, which they claim are inconsistent; also a change in the number of hours worked by patrolmen. An officer of the department conferred in Quebec City with representatives of the company and of the employees in regard to this dispute, and as a result of his mediation direct negotiations between the parties are now in progress.

(2) From 190 employees of Canada Veneers Limited, at Saint John, N.B., being members of Local Union No. 2533, United Brotherhood of Carpenters and Joiners of America. The dispute arises out of the efforts of the union to secure a signed agreement with the company providing for increased wages and improved working conditions; also a demand for reinstatement of an employee who, it is alleged, was dismissed because of his activities as secretary of the union.

(3) From 125 employees of the Canadian Pacific Railway Company at Britt and Jack Fish, Ontario, being clam tower operators, riggers, land, hoist or crane operators, clam tower firemen, power house firemen, land, hoist or crane firemen, hatchmen and cable car trippers, boat and trestle men, clerks and unclassified labour, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The cause of the dispute is stated to be the employees' request for increased wages and for either an agreement covering the employees at Jack Fish or the inclusion of those employees in the agreement at Britt.

It was reported in the LABOUR GAZETTE for January, 1940, page 8, that Messrs. Arthur W. Roebuck, K.C., and Victor A. Sinclair, K.C., both of Toronto, had been, on the recommendation of the employees and company concerned, appointed members of the Board of Conciliation and Investigation established to deal with a dispute between the Toronto Terminals Railway Company and the "Red Cap" messengers employed at the Toronto railway terminal, being members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. Mr. Roebuck subsequently resigned as a member of the Board and on the recommendation of the employees the Honourable James Murdock, of Ottawa, was appointed Board member in his stead. Senator Murdock and Mr. Sinclair were unable to agree upon a person for appointment as third member and chairman of the Board, and in the absence of a joint recommendation the Minister appointed His Honour Judge John T. Mulcahy, of Pembroke, Ontario, to the chairmanship.

A Board of Conciliation and Investigation was established by the Minister on February 24th to deal with a wages dispute between the London Street Railway Company and its motormen-conductors, bus operators, shopmen, barnmen and trackmen, members of Division 741, Amalgamated Association of Street and Electric Railway and Motor Coach Employees of America (LABOUR GAZETTE, February, 1940, p. 101). The personnel of the Board is as follows: His Honour Judge J. J. Coughlin, of Windsor, Ontario, chairman, appointed by the Minister in the absence of a joint recommendation from the other board members, Mr. Waldon Lawr, K.C., of Toronto, nominated by the company, and Mr. Oliver William Durdin, of London, Ontario, nominated by the employees.

Following receipt in the Department of Labour on December 8 of an application for the establishment of a Board from underground miners, millmen, mechanics, surface workers, steel sharpeners, hoistmen, cage tenders, etc., in the employ of the Teck Hughes Gold Mines Limited, at Kirkland Lake, Ontario (LABOUR GAZETTE, December, 1939, p. 1207), a protest was made by the General Manager of the company concerning the manner in which the strike vote had been taken. It was claimed that the Kirkland Lake Local No. 240 of the International Union of Mine, Mill and Smelter Workers, did not represent the majority of the employees concerned, and that the ballot authorizing submission of the application and the declaration regarding strike action had been improperly taken and did not indicate the true views of the employees. In order to clarify the situation the department arranged to have a secret ballot taken of all employees of the Teck Hughes Gold Mines, Limited. The voting took place on February 7 under the supervision of an officer of the Department of Labour, with scrutineers appointed by the

employer and employees present. The employees were required to vote "yes" or "no" on the following question:—

"Failing an adjustment of the dispute now existing or a reference thereof by the Minister of Labour to a Board of Investigation and Conciliation I hereby authorize the calling of a strike."

Of 657 persons eligible to vote, 632 cast ballots, 383 favouring and 247 opposing a strike. Two ballots were spoiled. In the meantime, on January 31, the company discharged 47 employees, two of whom had been signatories to the application. A Board of Conciliation and Investigation was established by the Minister of Labour on February 13, the personnel of which is as follows: the Honourable Mr. Justice W. M. Martin, of Regina, Sask., chairman, appointed by the Minister in the absence of a joint recommendation from the other board members, and Messrs. G. C. Bateman and J. L. Cohen, K.C., both of Toronto, nominated by the company and employees respectively.

The text of the findings of the Board which dealt with a dispute between the Malagash Salt Company, Limited, and its employees being members of the United Salt Mine Workers, Local Industrial Union No. 323, C.I.O., appeared in the Labour Gazette for December, 1939, page 1215. The employees ceased work on February 19 because of the failure of the company to comply with the Board's recommendations that wages of all men receiving less than $3 per day should be increased to that amount and that the eight hour day should be put into effect in the mine. Details of the strike will be found in the article on Strikes and Lockouts in Canada during February, 1940, beginning at page 206 of this issue.

Report of Board in Dispute between Mr. F. W. Nicholas and the Checkers, Porters, Coopers, etc., in his Employ at Port McNicoll, Ontario

The findings of the Board of Conciliation and Investigation established to deal with a dispute between Mr. F. W. Nicholas, of Port McNicoll, Ontario, and the checkers, porters, coopers, etc., in his employ, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, were received by the Minister of Labour on February 14.

The report of the board is signed by the chairman, Honourable Mr. Justice C. P. McTague, of the Court of Appeal for the Province of Ontario, and the member nominated by the employer, Mr. V. A. Sinclair, K.C., of Toronto. The board member nominated by the employees, Mr. Arthur W. Roebuck, K.C., of Toronto, dissented from certain recommendations of the other members and presented a minority report.

The texts of the two reports follow:

Report of Board

In the matter of the Industrial Disputes Investigation Act and of a dispute between Mr. F. W. Nicholas, of Port McNicoll, Ontario (Employer), and checkers, porters, coopers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, (Employees).

To the Hon. Minister of Labour,
Ottawa, Ontario.

Sir,—The Board of Conciliation and Investigation appointed by you in the above matter now begs to report that the board is composed of the Hon. Mr. Justice C. P. McTague of the Court of Appeal for the Province of Ontario, appointed on the joint recommendation from the other members, and Arthur W. Roebuck, Esq., K.C., of Toronto, nominated by the employees, and V. A. Sinclair, Esq., K.C., of Toronto, nominated by the employer.

At the hearings the employees were represented by:

Mr. F. H. Hall, Vice-President,
Mr. W. H. Rowe, General Chairman (C.P.R.),
Mr. John Travers, Local Chairman,
Mr. Steve Thoms, Assistant Local Chairman,

all of the employees' union; and the employer was represented by:

Mr. F. W. Nicholas, the employer,
Mr. N. McMillan, General Superintendent for the C.P.R., Toronto.

The Board met on October 20, 1939, to discuss and agree upon procedure, the time for first public hearing and making arrangements for place of hearing at Osgoode Hall, and for fixing the date of the first hearing.

The Board commenced its public hearings at Osgoode Hall, Toronto, on October 24 and, after hearing the case of the employees and a formal reply of the employer, the hearing was adjourned until October 26 to permit of preparation of a reply by the employer and was resumed on October 26 when both parties were again heard. At the close of the hearing a recommendation was made to the parties that they try and get together and settle their differences and that the Board would adjourn until the next day when it was hoped an agreement would have been arrived at.

The Board resumed its sittings on October 27 when the parties reported that they were unable to agree owing to a difference upon certain fundamental principles. Further submissions in writing were made by both parties to cover questions upon which the Board wanted further information and the Board then resumed its sittings on November 7 when the Board thoroughly considered the representations and the documents filed by the parties. After considerable discussion it appeared that it would not be possible for the members of the Board to agree on all points. Suggestions were then made that it might be possible to get the parties themselves to agree and meetings of the Board were held on November 16 and 24 after interviews with the parties to bring about such agreement. Finally on December 18 a meeting of the Board was held at which all parties were present and the parties agreed to meet and discuss an agreement which could be approved by the Board. Such meeting was held but both parties have advised the Board that no agreement could be reached. The Board therefore met this 30th of January, 1940, and considered final reports, which were signed, as Mr. Roebuck unfortunately desired to submit a minority report on one of the matters at issue.

It is understood by the Board in making this report that an amended agreement is under discussion between the parties and that such an agreement will be completed and entered into by the parties and that the only matters in connection with this agreement which have been referred to the Board for decision are five in number and the terms of this amended agreement between the parties are left entirely to the parties for settlement except as to the matters which have been expressly referred to the Board which are as follows:

1. The matter of certain dismissed employees going back to May, 1938, and which the employees alleged had been dismissed because of their being associated with the organization of the union.

2. The addition to the agreement of a new classification covering those engaged in coal handling at Port McNicoll.

3. An increase in the hourly rates of pay of the employees to the following amounts:

Checkers	·61
Coopers	·56
Motor truck operators	·54
Watchmen	·53
Sling men	·53
Porters	·51

4. That these rates of pay be made retroactive to the date of application for a Board.

5. Allowance of time and a half for work performed on Sunday and upon specific Dominion holidays.

Finding Number One: As to the question of dismissal of employees.

When this matter came up for discussion on the hearing, witnesses being present on the suggestion of the Board, it was agreed by both parties that the matter of the dismissal of these workmen should be referred to Mr. N. McMillan, General Superintendent of the Canadian Pacific Railway, and Mr. W. H. Rowe, General Chairman (C.P.R.) of the union, for final decision, so that no finding is made by the Board in this connection.

Finding Number Two: The addition of a new classification under the agreement for those engaged in coal handling at Port McNicoll.

After careful consideration the Board finds that owing to the difference in the kind of work and the conditions under which it is carried on, it is not desirable that any new classification of coal handling should be added to the agreement in question but the Board do not make any findings as to the rates of pay which should be allowed to the coal handlers and consider that this can be dealt with in a satisfactory manner by the employer and men engaged.

Finding Number Three: Claim for raise of hourly rates to pay of the employees.

The Board have considered the representations made and the evidence which has been submitted to the Board on behalf of the employees showing rates of pay which have been entered into by the employers in similar classes of work during the years 1938 and 1939 and extending from Montreal through Toronto and Hamilton, Point Edward to Fort William and Port Arthur at the Head of the Lakes. The basic rate arrived at in these agreements for porters who constitute about 75 per cent of the men engaged at Port McNicoll appears to be a rate of 50 cents per hour with an additional one cent per hour for night work.

Notwithstanding the various increases already made by the employer and his submission as to what constitutes a fair wage at Port McNicoll, the Board finds that the rate agreed upon at Fort William by the C.P.R. and its employees should also constitute the hourly rate of pay for porters at Port McNicoll, and that the hourly rates of pay of the porters at Port McNicoll should therefore be advanced to the Fort William rate, namely, 50 cents for actual time worked, with a differential of one cent per hour for the work performed between the hours of 7 p.m. and 7 a.m., and that the agreement should provide

this basic rate for porters, with the usual additional rates for other grades of employment not exceeding in any case the agreed rate at Fort William.

Finding Number Four: Retroactivity of rates of pay.

The Board consider that the practice* of the Department of Labour as confirmed by agreement with many of the railroad unions is that retroactive effect shall not be given to the recommendations of such Boards except by mutual agreement beyond the date of disputes are finally dealt with by the Board and copies of their reports have been delivered through the Registrar of Boards of Conciliation and Investigation to the parties affected, and the Board find that in this case the practice of the Department shall be carried out and that the increases of pay shall take effect from the time that the findings of the Board have been communicated by the Registrar to the parties.

Finding Number Five: Claim of employees for time and one-half on Sundays and Dominion statutory holidays.

As stated during the hearings, the Chairman has felt a great deal of difficulty in coming to a decision on this branch of the employees' application and has felt strongly influenced by and sympathetic with the claims made by the employees that this allowance has been made in most of their contracts for this kind of work from the Atlantic to the Pacific and is to that extent a somewhat standard practice and that it might adversely affect the agreements already entered into by them in which this has been allowed (more especially those entered into with the Canada Steamships Lines at the various lake ports cited) and also with their claims that Sunday is the best day of rest that man can have and that they should be entitled to it where possible, and also that a punitive allowance of time and a half on Sunday would have a strong influence on doing away to a great extent with the practice of Sunday work and that their employees at Port McNicoll should have the same privileges in this respect as their members at other ports. On the other hand, it has been just as strongly urged by the employer and Mr. McMillan, the representative of the C.P.R., that, whether this work is performed through a contractor or not, the operations at Port McNicoll are really a part of the Canadian Pacific Railway System and must be operated as such, and that there is a regular timetable to be observed in the handling of freight at this port as part of competitive freight systems which applies both to their transcontinental freight and freight from Chicago to the Eastern States, and that to carry on it is absolutely necessary that Sunday work should be done in the unloading, sortation and reloading of freight at Port McNicoll in continuous railroad operation, and that the railroad principle of a regular assigned day off duty in each week, Sunday if possible, should apply to these freight handlers at Port McNicoll and that this has been offered to these employees, who have refused it, preferring to take Sunday work at regular pay, as is now the practice of this port; and they further claim that the new condition applied for by the employees of time and a half for Sunday work has not been adopted as a new condition in any agreement entered into by the Canadian Pacific Railway for twenty years and a memorandum is filed of the various agreements entered into by the various railroad unions, including the applicant union, confirming this. They also point out that this has not been the practice at Port McNicoll, at Depot Harbour, the adjoining C.N.R. port, which is also a railway operation similar to that of Port McNicoll, nor at Britt, also a Georgian Bay port for coal handling, where an agreement was entered into with the same union as makes this application which became effective on June 16, 1938, in which the principle contended for by the employer has been fully recognized. They further contend that the agreements referred to by the employees in which time and a half for Sunday is recognized, are the exceptions and are due to local conditions in ocean ports, to the long-established practice of the longshoremen, and at Fort William to the fact that this practice was very old, running back to 1908 at least, and had not been changed due to long observance and at most seasons little Sunday work.

After careful consideration of these different contentions the Board find (Mr. Roebuck dissenting) that the operation at Port McNicoll is essentially a railroad operation to which the railroad principles apply and that Sunday work is a necessity in continuous railway operation and that therefore the agreements entered into between the Canada Steamships Lines and shipping companies to which railroad principles do not apply are not really applicable, and in the same way the Board's finding in this case would probably not be considered as in any way interfering with the

* Editor's Note.—This relates to an opinion obtained by the Labour Department from the Department of Justice in December, 1931, at the request of representatives of various railway employees' organizations, who had protested against a wage deduction being made retroactive in accordance with a board's recommendation, and had contended that Section 58 of the Industrial Disputes Investigation Act prohibited a change in wages until the board had dealt with the matter and a copy of its report had been delivered to the parties affected. This contention was upheld by the Department of Justice in the opinion referred to above. (LABOUR GAZETTE, January, 1932, page 16).

agreements entered into between the union and steamship companies at other ports.

The Board further find after considering the best interests of the employees and the substantial increase in rates of pay made by this report, the recognized principle of an assigned day off work each week, Sunday where possible, in railway practice, and that the practice in the Georgian Bay ports of Port McNicoll, Depot Harbour and Britt has not allowed time and a half for Sunday, that therefore time and a half on Sunday should not be allowed unless Sunday is the assigned day off work.

On the question of time and a half on Dominion statutory holidays the employer has been willing, if Sunday time and a half was not granted, to pay time and a half on certain Dominion statutory holidays. In accordance with railroad practice the Board find that the request of the men for time and a half on Dominion statutory holidays as enumerated hereafter should be granted.

There should be added to the amended contract clauses to the following effect:

Employees will be assigned a regular seventh day off duty each week, Sunday if possible. If required to work on such regular assigned seventh day off duty, they shall be paid at the rate of time and one-half on the actual minute basis with a minimum of two hours at time and a half for which two hours' service may be required.

Where employees are required to work on New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day or Christmas Day, they shall be paid at the rate of time and one-half. In the event of any of the above holidays falling on Sunday the day substituted by the Federal Government shall be observed.

In conclusion the Board desires to thank the representatives both of the employees and the employer for the ability and fairness with which they have presented their respective cases and for their unfailing courtesy in supplying all the information which the Board have desired and the Board desires to accord them the highest praise in this connection.

All of which is respectfully submitted.

Signed: C. P. McTague,
Chairman.

Signed: V. A. Sinclair,
Member.

Toronto, January 30, 1940.

Minority Report

In the matter of The Industrial Disputes Investigation Act and of a Dispute between Mr. F. W. Nicholas of Port McNicoll, Ontario, (Employer); and Checkers, Porters, Coopers, etc., Members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, (Employees).

To the Honourable the Minister of Labour,
Ottawa, Ontario.

SIR,—Through the courtesy of my fellow members of the Board, I have had the advantage of reading their majority report, and find it necessary to dissent in a number of particulars. I join in *Finding Number One,* so that in the matter of the dismissed employees we are unanimous.

I do not agree with *Finding Number Two.* The freight handlers at Port McNicoll are now paid an additional 4 cents per hour when shovelling coal. The employer justifies this increase in rate by saying that coal shovelling is heavy work, usually outside, often in rain, and frequently at night. The employees claim that this advance of 4 cents should be maintained were the general rate increased to 50 cents. By practice, the employer has voluntarily created a differential rate higher than that of freight handlers, and in accordance with the reasons given above, in which all agreed, I think it should be maintained, and I recommend accordingly.

With regard to *Finding Number Three,* that the wages of porters at Port McNicoll should be advanced to 50 cents per hour with an additional 1 cent per hour for night work, with the usual additional rates for other grades of employment, I join heartily. Much might be said in support of this finding, but in the majority report, the facts I think are sufficiently stated.

In *Finding Number Four,* the majority hold that the awarded increase in wages should not be retroactive on the ground that it is the practice† of the Department of Labour that retroactive effect shall be given to recommendations of Boards of Conciliation only when mutually agreed upon by the parties. With this I disagree. I do not understand in my appointment any obligation to restrict the Board's findings within the bounds of any arbitrary rules of practice of the Department of Labour. I think the question should be determined purely on the basis of the justice of the claim. The agreement as to wages under which the parties operated during the season of 1939 was reached when the men were on strike. The men compromised in order that the activities of the Port might be resumed, but they were not satisfied and they included in the agreement the right to terminate on thirty days' notice, and notice was given when the men applied to the Department of Labour for the constitution of the

† See editor's note on page 201.

present Board of Conciliation. The employees allege that the long delay is bringing the question to a hearing was caused by the employer. This, the employer denies, and the point may be left undecided. The fact is that practically the entire season of activity went by while the men were working at a rate which they claim to be unjust and which was unsatisfactory to them. Had the employees' other demands been granted by the employer, that for a retroactive effect of the increase in wages now found by this Board to be just may possibly have been abandoned by the men, but that is a matter of negotiation rather than of decision on a basis of rights. I think the Board's award should apply from the date of the men's application, and my recommendation is that the wage increase be made effective from May 1, 1939, inasmuch as notice of the desire to revise the agreement had been duly given on March 2, 1939, and it seems unreasonable that the processes of negotiation and board procedure should operate to deprive the employees of any advance during the entire period of navigation last year.

Finding Number Five in the majority report is to the effect that the work of the employees at Port McNicoll is essentially a railroad operation and that therefore the principle of an assigned day off work each week, Sunday where possible, should apply. It is also found that the men's request for time and a half on Dominion statutory holidays should be granted. With the last finding I agree, but with the first I completely and strongly disagree.

It seems that at the present time, the men are called down to work on Sundays, with no provision for an alternative day of rest, other than the provisions of the general Sunday law, and with no increase in rates of pay. The employees ask that they be paid time and one half for Sunday work. They argue that Sunday work is worth more than that performed on week-days because of the loss of the regular and desirable atmosphere of the usual day of rest and because the hours of employment as a matter of practice are shorter on that day than on weekly work days. They also claim that the declarence of an inincreased rate of pay would result in the almost total elimination of Sunday work, which is of course desirable.

The employer proposes to meet the difficulty by assigning to each employee from time to time a weekly day of rest, on some day throughout the week, with the provision that when work is required on the assigned day it shall be paid for as time and one half. This employer's proposal the majority of the Board adopt, so that men will work for the shorter hours of Sunday and under its general disadvantages, with no increase in rate over that paid on ordinary work days.

The assigning of a day of rest other than the true Sunday, however, is not an acceptable remedy. The number of hours worked by those called for Sunday labour is usually about only four hours of the day. It is not practical to call a smaller number and give a full day's work, because of train connections at Medonte, which is the junction point on the main line with which Port McNicoll connects, or rather perhaps it should be said because of the added expense required to make the necessary arrangements for connections at Medonte in the event of a change in the present system.

Were the men who work on Sundays assigned a day of rest on some one of the week days, they would be seriously penalized. Were they paid 50 cents an hour for the four hours usually worked, they would receive, say, $2 per day, notwithstanding the fact that they have lost the benefit of an unbroken Sunday. On the other hand, the man who was assigned a day of rest on Sunday would work on the week days (when the Sunday men were off work) for the full ten hours of the ordinary working day, and with the reasonable possibility of further time at a rate of pay increased by the addition for overtime. Thus, while the man who lost Sunday would be paid $2, the man who retained his Sunday and worked on the other man's assigned day, would receive perhaps $5, or even more. The proposal of the assigned day would therefore make the present hardship greater rather than being any remedy.

Now we find that conditions with regard to the day of rest among the classes of employees before the Board in this particular reference, are thoroughly established. From coast to coast on the railways, both Canadian Pacific and Canadian National, the groups of men in question, who are referred to in a general way as "freight handlers," if worked on Sunday, are paid time and one half. The texts of agreements between the railways and their employees were laid before the Board exhibiting the conditions in this regard, at—

	Employees
West Saint John, N.B....	650
St. Andrews, N.B.....	10
Montreal, P.Q.....	650
Port Arthur, Ontario....	325
Fort William, Ontario....	350
Vancouver, B.C.....	150
Halifax, N.S.....	600

a total of 2,735 employees. In every one of the above, it appears that the agreement provides that the freight handlers shall receive time and one half for Sunday work except in two places, in one of which, Saint John, they

get double time, and in the other, Vancouver, they are paid 61 cents per hour (porters' rate) for regular time, and 93 cents per hour (porters' rate) for Sundays and holidays and any other overtime—93 cents per hour is slightly more than time and one half over the 61 cent rate. In not one of these cases is there a provision for an assigned day of rest other than the actual Sunday.

Agreements were also produced exhibiting the conditions in this regard affecting men employed by the steamship companies. These agreements were for:—

	Men
Montreal.	560
Toronto	350
Hamilton	150
Port Edward and Sarnia.....	200
Windsor.	50

In every one of these agreements the provision was time and one half for Sundays and holidays, without any provision for an assigned Sunday.

The only actual exception to the general rule brought to the attention of the Board was that of Port McNicoll Here the men are working for a contractor who is engaged by the railway, instead of directly with their real employers, either the steamship company or the railway. There does not occur to me any reason whatsoever why special concessions should be made to an intervening contractor that are denied throughout Canada to the ultimate employer.

It was strongly argued by the railway's representative that the general principle of the assigned weekly day of rest, as set up in the railway rules, should be made to apply to Port McNicoll, although he admitted that it did not apply in the other places which I have already mentioned. He argued against the concession of time and a half for Sunday work in Port McNicoll as a matter of principle.

Clearly, however, if the principles of the railway agreements are to apply and are to govern the conditions of wages and hours as between the employees and their employer at Port McNicoll with respect to Sunday rates, then also all other conditions of the railway agreements should apply. Due to the intervention of the contractor, the freight handlers at Port McNicoll are denied free transportation on the railway, such as is accorded to other railroad employees, and of course are not covered by the railway pension scheme. Men under the general agreement work all the year around on an eight-hour day, and are paid for all time over eight hours at a rate of time and a half. The men at Port McNicoll work ten hours before the two cents per hour overtime rates apply, and they are paid for only such time as they actually work.

For instance, a schedule of expected ship-arrivals is posted on the docks, and the men are expected to be present to meet the boat. If the boat is late, as is frequently the case, the men wait for periods of time varying from a few minutes to several hours. For this time they get nothing. Overtime for the freight handler at Port McNicoll is only two cents per hour, not time and a half as on the railway.

Employees under the railway's general agreement get a minimum of three hours' pay if called to work, irrespective of how long they actually do work. The Port McNicoll employees are paid only for the time they are actually engaged in work, with nothing for coming to work, going home, or waiting for the work to commence. The reference to the three-hour rule above-mentioned applies, of course, only to men on hourly rates of pay. Many railway employees are engaged by the month, and they receive their monthly cheque irrespective of hours worked, overtime added. There may be other advantages enjoyed by the employees of the railway under the general rules, but those mentioned are sufficient to illustrate the unfairness of applying one principle to be found in the rules to the handlers of freight at Port McNicoll and omitting all the rest. Moreover, the evidence indicates that the assigned seventh day off duty principle appearing in the railway's general agreement is restricted in its application, and in effect applies only to such employees as are required in connection with continuous operation of train service, referring particularly to passenger trains. It was not shown that any freight handlers under the general agreement are working straight time for six days with an assigned day off in lieu thereof.

Sunday work has been eliminated at other points where time and one half is paid for Sunday work, including Fort William which is in the immediate neighbourhood and is part of the same service. It may not be possible to say that Sunday work at Port McNicoll would be completely eliminated were the time and one half rule in effect, but it is safe to forecast that it would be reduced to an amount so small as to be almost negligible. Such a trend is the experience elsewhere, and one may expect a similar occurrence here. And the reason is obvious. The boats do not arrive at Port McNicoll on Sunday. They arrive on Saturday about noon, and they leave on the following Monday at about noon. There is accordingly plenty of time for loading and unloading Saturday afternoon and evening and on Monday morning.

No doubt the same applies, at least in large measure, to the train service for Medonte, which is the junction point for Port McNicoll,

is on the main line between Toronto and Winnipeg, and freight trains are passing almost continuously. It is not possible for the Board to go into this exact detail, but it would seem to be within the power of the railway management to make the necessary arrangements. In addition it should be observed that the freight carried by boat is not express nor even as a rule fast freight. Goods go by boat because of the lower rate charges and the lack of necessity for great despatch.

I am of opinion therefore that the time and one-half rate should apply in Port McNicoll at it does to comparable labour at all other comparable points for both Sundays and holidays.

I concur in the majority finding that when employees are required to work on New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day or Christmas Day, they should be paid at the rate of time and one half, and in the event of any of the enumerated holidays falling on Sunday, the day substituted by the Federal Government shall be observed.

I also very heartily concur in the commendation expressed in the majority report for the ability and service with which the representatives of both the employees and the employer presented their respective cases, and for their unfailing courtesy both to the Board and to one another.

All of which is respectfully submitted.

(Sgd.) A. W. Roebuck.

Dated at Toronto the 13th day of February, 1940.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1940

THE following table shows the number of disputes, workers involved and time loss for February, 1940, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time lost in man working days
*Feb. 1940	14	3,161	14 687
*Jan. 1940	6	919	6,861
Feb. 1939	8	2,622	24,098

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts during February, as well as the number of workers involved and the time loss in man working days, was considerably greater than in January owing to the occurrence of several strikes involving comparatively small numbers of workers in addition to four disputes which resulted in considerable time loss, those involving coal handlers at Toronto, Ont., gold miners in British Columbia, coke oven workers at a steel plant in Sydney, N.S., and salt miners at Malagash, N.S. In January the only disputes which caused much time loss were those involving gold miners in British Columbia and electric wire workers at Brockville, Ont. In February, 1939, a dispute involving rubber workers at Kitchener, Ont., caused over half of the time loss for the month but there was also considerable time loss due to strikes of coal miners at Blairmore, Alberta, and at Cumberland, B.C.

Two disputes, involving 480 workers, were carried over from January and twelve disputes commenced during February. Of these fourteen disputes, twelve were terminated during the month, six resulting in favour of the workers involved, compromise settlements being reached in four cases and the results of two disputes being recorded as indefinite. At the end of the month, therefore, there were two strikes or lockouts recorded as in progress, namely: gold miners, Pioneer Mines, B.C., and salt mine workers at Malagash, N.S.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. Information is available as to three such disputes, namely: stationary engineers, Toronto, Ont., March 2, 1939-March 11, 1939, one employer; fur factory workers, Toronto, Ont., October 17, 1939-October 31, 1939, one employer; and work clothing factory workers, Winnipeg, Man., December 1, 1939-December 15, 1939, one employer.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required are not included in the record, no relation of employer and employees being involved.

A strike of workers in a dress factory in Montreal, P.Q., from January 22 to January 24 was reported to the Department too late for inclusion in the LABOUR GAZETTE for February. The employees desired an increase in piece rates of twenty per cent to be negotiated under a clause in the agreement providing for an adjustment on January 15 or arbitration of the claim. As a result of negotiations an increase of seven and one-half per cent was made for some workers and five per cent for others.

A cessation of work by nine employees in a coal mine at Joggins, N.S., occurred on February 13 and the mine was reported to be closed permanently. Following a strike in December it was arranged that the mine would be operated on a co-operative basis under the managing director of the company by which it had been operated. The miners claimed they were not making a living wage.

A minor dispute as to piece work earnings at Frankford, Ont., involved some forty apprentices in a stoppage of work for a short time on February 8. The management explained the cause of the temporary reduction in work, stating that the minimum wages arranged for would be paid.

A minor dispute involved thirty of the apprentices in a glove factory in Prescott, Ont., for one-half day on February 20. It was reported that there was some objection to the wages paid for nine and a quarter hours per day but the direct cause of the stoppage was the dismissal of five boys for misconduct. The strikers resumed work on the next day.

A minor dispute involved four pin boys in a bowling alley at Leamington, Ont., on February 19. These demanded an increase in pay from two and one-half cents per string to three and one-half and were reported to have been replaced immediately.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress Prior to February

GOLD MINERS, PIONEER MINES, B.C.—The proposal to refer the dispute to a Board of Conciliation and Investigation under the Industrial Disputes Act made by the miners' union toward the end of January was taken up with the management, the consent of both parties being required as mining disputes are not directly within the scope of the statute since the enactment of the British Columbia Industrial Conciliation and Arbitration Act in 1937. The consent of the management to a joint application was not given. On February 27 it was reported that a number of strikers entered the mine with supplies of food and water announcing that they would remain until a settlement of the dispute was reached. After two days as a result of discussion with a provincial police officer they agreed to come out of the mine. The management reopened the mine with a partial staff on March 6, and the union called off the strike on Sunday, March 10.

ELECTRIC WIRE WORKERS, BROCKVILLE, ONT.—As stated in the LABOUR GAZETTE for February, this dispute was terminated and work resumed on February 5. It appears that work was partially resumed on February 2. A compromise on the wage increase was reached at five cents per hour for males and three cents for females, with certain other alterations to be made in an amendment to the agreement.

Disputes Commencing During February, 1940

GOLD MINERS, GOLDEN CITY (PORCUPINE), ONT.—A number of employees in one mine ceased work on February 8 to secure increases in wages, a reduction in hours to eight per day from nine and over, apparently for surface employees, and improvements in sanitary and safety conditions. As a result of negotiations a settlement was reached and work was resumed on February 10. Wages were raised to 50 cents per hour for helpers and 57½ cents per hour for machine men, while the eight-hour day and improvements in conditions were agreed upon. It was reported that many of the workers joined the International Union of Mine, Mill and Smelter Workers.

SALT MINE WORKERS, MALAGASH, N.S.—Employees ceased work on February 19 to secure an increase in wages and the eight-hour day as recommended by a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, (LABOUR GAZETTE, December, 1939, page 1215). The majority of the Board had recommended that the minimum rate should be $3 per day and that hours should be reduced from ten per day to eight "as soon as it is practical without disrupting the industry." The report also stated that to enable the company to continue operations successfully certain measures were necessary in relation to railway charges, improvements in the market for salt, provincial royalties, etc.

On receipt of the report of the Board the Department referred the recommendations to the Nova Scotia Government, the federal Department of Fisheries, the Canadian National Railways, etc., and was informed that consideration was being given to these recommendations with a view to carrying them out as far as possible. The question as to the market for the salt was taken up by the Fisheries Department with the Salt Fish Board and the Fisheries Experimental Station at Halifax. The company advised the Department that it was unable to raise the rate to $3 even for the ten-hour day until the market improved and that conditions were less favourable than during the proceedings before the Board. At the end of the month a settlement had not been reached. On March 10 it was reported that as a result of conciliation by the Nova Scotia Department of Labour the representatives of the employer and of the workers had agreed that work should be resumed at the previous rates of wages for a period pending further attempts to improve the financial conditions of the company.

Coal Miners, Port Hood, N.S.—Employees in one mine re-opened last year ceased work on February 20 demanding the reinstatement of two miners and claiming that the agreement in settlement of a strike on January 12, 1940, was not being carried out. It was also reported that they demanded the dismissal of the manager. Two miners had left their work two days before, claiming that a payment of seven cents per ton for extra handling of coal was not being paid as provided in the agreement. On returning later they were informed that they had been replaced and were discharged. The United Mine Workers then called a strike. As a result of conciliation by the provincial Department of Mines work was resumed on February 28, the two miners being reinstated, and it was agreed that the terms of the agreement would be carried out. During the dispute nine men were charged with unlawful assembly, having told the manager to leave and followed him to town, threats being alleged. The magistrate remanded them on bail for trial in May.

Coal Miners, Stellarton, N.S.—A number of men on the afternoon shift ceased work on February 26 as the result of the installation of new machinery in connection with longwall mining, claiming payment for extra work owing to its use. The night shift also joined in the strike but work was resumed on the next day pending negotiations.

Women's Clothing Factory Workers (Dresses), Montreal, P.Q.—Three strikes occurred in three shops, the employees claiming that the employer in each case on failing to reach a settlement by negotiations as to certain changes should have arbitrated the dispute as provided in the agreement.

In one establishment the employees alleged discrimination against certain workers and demanded that work should not be sent out when regular workers were unemployed and in any circumstances only to union contract shops. The strike was from February 2 to February 9 and the demands of the workers were accepted.

In another establishment a twenty per cent increase in piece rates for certain work was desired and ten per cent was secured after a strike from February 6 to February 8.

In a third shop changes in working conditions were sought, reducing the work to be done for the same wages. This was obtained after a stoppage for one-half day on February 8.

Weavers, Cotton Factory, St. Gregoire de Montmorency, P.Q.—The weavers in one establishment ceased work on February 19 alleging that a change in the wage payment system reduced earnings below the level provided for in an ordinance of the provincial Fair Wage Board effective from October 10, 1939, which increased wages by ten per cent. The dispute was referred to the Board for an interpretative ruling and on investigation it was stated that the wording of certain clauses in the order should be amended for clarity and the employer was ordered to pay rates which would provide for the ten per cent increase pending the issue of the amending order. On being informed of this by the provincial Minister of Labour, work was resumed on February 26.

Woodenware Factory Workers (Pails, Etc., Owen Sound, Ont.—Employees in one establishment ceased work on February 14 to secure an increase in wages. As a result of conciliation by the Ontario Department of Labour a compromise was reached at ten per cent increase for those receiving less than 39 cents per hour and five per cent for the others. The Canadian Woodworkers' Union affiliated with the All-Canadian Congress of Labour was recognized and work was resumed on February 19.

Steel Mill Workers (Coke Oven), Sydney, N.S.—A number of employees in the coke oven department of one firm ceased work on February 9, in protest against the appointment of three new men to new positions instead of selecting them from among the employees. During negotiations the management pointed out that the rate of pay was lower than that for those already employed. As the employer had contracts for goods and materials which brought the dispute directly

under the provisions of the Industrial Disputes Investigation Act as extended under the War Measures Act the Minister of Labour dealt with the dispute and work was resumed on February 17. The employer agreed to suspend the new men pending further negotiations, those on strike to be taken back without discrimination, a Board of Conciliation and Investigation to be established if negotiations did not result in a settlement of this question as well as of an increase in wages under consideration.

COAL HANDLERS, DRIVERS, YARDMEN, ETC., TORONTO, ONT.—Employees of nearly all of the coal dealers in Toronto and vicinity ceased work on February 19 to secure a closed shop agreement with their employers. Many of the employers belonged to various associations. Employees who were members of the Coal Drivers, Helpers and Truckers' Union, a local of the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, in January applied for a Board of Conciliation and Investigation under the Industrial Disputes Act. The matters in dispute being the trade practices of certain dealers, guaranteed prices, group buying, coupons, etc., it was found that a Board could not be established (LABOUR GAZETTE, February, 1940, page 101). The union representatives stated that these trade practices by certain dealers affected the business of many dealers so as to reduce the employment and earnings of the employees and proposed to the employers' associations that there should be closed shop agreements with an increase in wages of ten cents per hour, abolition of piece work, time and one-half rates of pay after nine hours per day and on Sundays and holidays, with certain rules as to working conditions. The employers not agreeing to this, the union withdrew all demands except that for the closed shop. The wages for the various classes of workers are under the Industrial Standards Act of Ontario, a schedule having been approved by Order in Council, October 20, 1939 (LABOUR GAZETTE, November, 1939, page 1184). The handling of coal is under a by-law of the City of Toronto. It was reported that during the strike the distribution of coal was confined to that for hospitals, schools, certain public buildings and to homes where there was sickness and those of persons on relief. The strikers picketed the yards of the dealers but there was very little interference with the few loads of coal being delivered. As a result of conciliation by the Ontario Department of Labour the strike was terminated on February 22. Work was resumed at the wages under the schedule for the coal industry in Toronto under the Industrial Standards Act, the employers agreeing that there would be a grievance committee in the establishment of each employer, composed only of the employees, to deal with any matter affecting working conditions with a reference of any dispute not settled to conciliation or arbitration by the Ontario Department of Labour. It was also provided that the committee set up on the suggestion of the Ontario Minister of Labour would be continued. This consists of representatives of six employers' associations and of the union with the Chief Conciliation Officer of the Ontario Department of Labour as chairman.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1940*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to February, 1940				
MINING, ETC.—				
Gold miners, Pioneer Mines, B.C.	1	142	3,550	Commenced Oct. 8, 1939; for recognition of union, check-off of union dues and increased wages; unterminated.
MANUFACTURING—				
Metal Products—				
Electric wire workers, Brockville, Ont.	1	338	500	Commenced Jan. 26, 1939; for amendment to union agreement with increase in wages, etc.; terminated Feb. 2; conciliation (provincial); compromise.
(b) Strikes and Lockouts commencing during February, 1940				
MINING, ETC.—				
Gold miners, Golden City (Porcupine), Ont.	1	14	28	Commenced Feb. 8; for increased wages and changes in working conditions; terminated Feb. 9; negotiations; in favour of workers.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1940*—*Continued*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(b) Strikes and Lockouts commencing during February, 1940				
MINING ETC.—*Con.*				
Coal miners, Stellarton, N.S.	1	12	12	Commenced Feb. 13; for adjustment of wages and improved conditions; terminated Feb. 13; return of workers; in favour of workers.
Salt mine workers, Malagash, N.S.	1	106	1,060	Commenced Feb. 19; for increased wages, reduced hours, etc.; unterminated.
Coal miners, Port Hood, N.S.	1	30	180	Commenced Feb. 20; alleged violation of agreement *re* discharge of workers; terminated Feb. 27; conciliation (provincial); in favour of workers.
Coal miners, Stellarton, N.S.	1	550	550	Commenced Feb. 26; for extra pay owing to new machinery; terminated Feb. 27; return of workers pending investigation; indefinite.
MANUFACTURING—				
Textiles, Clothing, etc.—				
Women's clothing factory workers (dresses), Montreal, P.Q.	1	120	720	Commenced Feb. 2; alleged discrimination against certain workers and against sending work to contract shops; terminated Feb. 8; negotiations; in favour of workers.
Women's clothing factory workers (dresses), Montreal, P.Q.	1	25	50	Commenced Feb. 6; for 20 p.c. increase in piece rate wages; terminated Feb. 7; negotiations; compromise.
Women's clothing factory workers (dress cutters), Montreal, P.Q.	1	41	20	Commenced Feb. 8; for reduction in production without decrease in wages; terminated Feb. 8; negotiations; in favour of workers.
Weavers, cotton factory, St. Gregoire de Montmorency, P.Q.	1	145	725	Commenced Feb. 19; against change in method of wage payment alleged to reduce earnings; terminated Feb. 23; conciliation (provincial); in favour of workers.
Miscellaneous Wood Products:				
Woodenware factory workers (pails, etc.), Owen Sound, Ont.	1	118	472	Commenced Feb. 14; for increased wages; terminated Feb. 17; conciliation (provincial); compromise.
Metal Products—				
Steel mill workers (coke ovens), Sydney, N.S.	1	260	1,820	Commenced Feb. 9; against employment of new men on certain work; terminated Feb. 16; conciliation (provincial); indefinite.
TRADE—				
Coal handlers, drivers, etc., Toronto, Ont.	225	1,260	5,000	Commenced Feb. 19; for closed shop union agreement; terminated Feb. 22; conciliation (provincial); compromise.

* In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. The annual review containing a table summarizing the principal statistics as to strikes and lockouts in Great Britain and other countries appears elsewhere in this issue.

Great Britain and Northern Ireland

In Great Britain the Ministry of LABOUR GAZETTE publishes statistics dealing with all strikes and gives some details of the more important ones.

The number of disputes which began during December was 40 and 12 were unterminated at the end of November, making a total of 52 in progress during the month. The number of workers involved was 15,800 and the resulting time-loss was 36,000 man working days.

Of the 40 strikes which began during December, 11 arose out of demands for wage increases and 9 were over other wage questions; two arose from questions of working hours, eight were over questions respecting the employment of particular classes or persons, eight were over working conditions and one was over a question of trade union principle. One strike arose out of the issue of summonses to certain workers for breach of contract.

Final settlements reached during December numbered 42. Of these six were settled in favour of the workers, 26 were settled in favour of the employers and 10 resulted in compromises. In the case of six other disputes work was resumed pending negotiations.

The strike which involved the largest number of workers during December occurred at one colliery near Rotherham, Yorkshire, when 1,707 workers struck on December 22 against the employer's refusal to close the pit for one afternoon in order that the workpeople might qualify for Unemployment Insurance Benefit; those indirectly affected numbered 796. Work was resumed on December 27.

At Ferryhill, Durham, 1,023 colliery workers went on strike on December 14 and 22 others were indirectly affected as the result of drillers' objection to a reduction in the number of holes to be drilled, involving a reduction in earnings. Work was resumed on December 16 after a settlement was effected involving a reduction in the number of drillers and resulting in increased earnings per man; surplus drillers were transferred to other work.

On November 16, 973 employees of one colliery near Kirkcaldy, Fifeshire, ceased work demanding increased tonnage rates for strippers; about 200 others were indirectly affected. Work was resumed on December 5 at the rates in force prior to the strike.

In London, 1,046 building trades workers went on strike on December 2, demanding a guaranteed working week. They resumed work two days later, pending negotiations.

United States

Preliminary estimates of strikes in December, 1939, which as the Bureau of Labor Statistics points out are based on "scattered information from newspapers and other sources and are subject to revision as more definite reports are received" show 105 strikes as beginning during the month which with 110 unterminated at the end of November made a total of 215 in progress during the month. The number of workers involved in these disputes was approximately 39,000, with a resultant time loss of 375,000 man working days. The comparable figures for the previous month, which have been partially revised but are not final, show that there were 275 strikes in progress involving about 126,000 workers with a resultant time loss of 1,625,000 man working days.

On February 25 about 8,000 longshoremen in ports on the southern Atlantic coast went on strike demanding an increase of 10 cents per hour in wage rates and a 44-hour week. Since last October the International Longshoremen's Association had been trying to negotiate a new agreement but work had been carried on under temporary renewals of the former agreement. On February 26 an official of the union reported that one firm had signed a contract by which they agreed to an increase of 5 cents per hour, but on March 4 a statement by the same official indicated that about 5,000 of the workers were still on strike.

STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES, 1939

While the number of strikes and lockouts recorded for 1939 was 122 as compared with 147 in 1938, the number of workers involved was more than twice as great, 41,038 for 1939 as compared with 20,395 in 1938, and there was a corresponding increase in time loss, 224,588 man working days as against 148,678 in the previous year. These increases were due to the occurrence of a number of coal mining strikes, chiefly in Nova Scotia, there being 48 disputes involving 31,102 workers with time loss of 111,274 days in 1939 as compared with 25 disputes involving 5,054 workers and causing time loss of 21,366 days in 1938. Disputes in other industries showed a considerable reduction not only in the number but in the workers involved and in the time loss. The agreements between the principal mining companies in Nova Scotia and the miners' union expired at the end of January and while it was arranged that the wages and working conditions in the agreements would remain in force pending negotiations for the renewal of the agreements there were many disputes as to working conditions, changes in local contract rates (for piece work), etc., during the year. The figures for all industries were substantially lower than in 1937, the year marked by the greatest time loss owing to labour disputes since 1925. The time loss resulting from coal

TABLE I—STRIKES AND LOCKOUTS IN CANADA BY YEARS, 1901-1939

Year	Number of disputes beginning during the year	Disputes in existence during year									
		All Industries				Coal Mining			Industries other than Coal Mining		
		Number of disputes	Number of employers	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days
1901	97	99	285	24,089	737,808	2	1,760	7,040	97	22,329	730,768

* In these totals figures for disputes extending over the end of a year are counted more than once.

mining strikes in 1937 was almost the same as in 1939.

The most important disputes during 1939 were those involving rubber factory workers in three strikes at Kitchener, Ont., in February, in April and in May; fish handlers at Lockeport, N.S., from October to December; coal miners at Blairmore, Alberta, in January and February; coal miners at Estevan, Sask., from October to December; gold miners at Pioneer Mines, B.C., beginning in October and unterminated at the end of the year; knitting factory workers at Brantford, Ont., in December; and textile factory workers at St. Jerome, Que., in October. Several strikes of coal miners in Nova Scotia involved large numbers of workers for only a few days. Over one-half of the time loss for the year was in mining, while over one-third of the total was in manufacturing, chiefly in the rubber and the textile industries.

The predominant cause of disputes as in most of the years in the past was the demand for increases in wages, 30 in number, with 6 regarding increases in wages and other changes. No disputes were recorded as primarily for changes in hours. There were, however, 22 regarding "other causes affecting wages and working conditions," an unusually large number, and these occurred chiefly in coal mining. There were 11 disputes as to union recognition and 35 as to all union questions, closed union shop, union agreements, etc., as in 1936, 1937 and 1938 a considerable proportion of all disputes.

Nearly forty per cent of the workers involved in all disputes were partially successful, slightly over forty per cent were unsuccessful, while twenty per cent were successful.

Compilation of Statistics

Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the LABOUR GAZETTE each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analysing the data, and since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the LABOUR GAZETTE are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada, 1901 to 1912," issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables. The annual reviews in the LABOUR GAZETTE have brought the lists of disputes and analytical tables down to date each year.

The annual review for 1930 appearing in the LABOUR GAZETTE, February, 1931, included summary tables back to 1901, the result of a revision of the record on the basis of the classification of industries adopted by the Dominion Bureau of Statistics and other government departments for official statistics. This classification had been used for strikes and lockouts since 1921, and it was advisable to have the record for earlier years on the same basis. Other revisions to secure uniformity throughout the whole period were also made.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such disputes involving less than 10 days' time loss is maintained in the Department. Although not included in the statistical record, such disputes are mentioned in the LABOUR GAZETTE at the time of their occurrence. During 1939 there were 16 such disputes, involving 417 employees, causing a time loss of only 77 working days.

In Tables I and X the number of employers involved is given. Where a number of establishments, mines, etc., are under one management, one employer is counted. In disputes which involve large numbers of shops or factories, clothing, fur, furniture, etc., or building construction jobs, logging and fishing operations, only the approximate number of employers is usually reported.

The figures in this report are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. As to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days

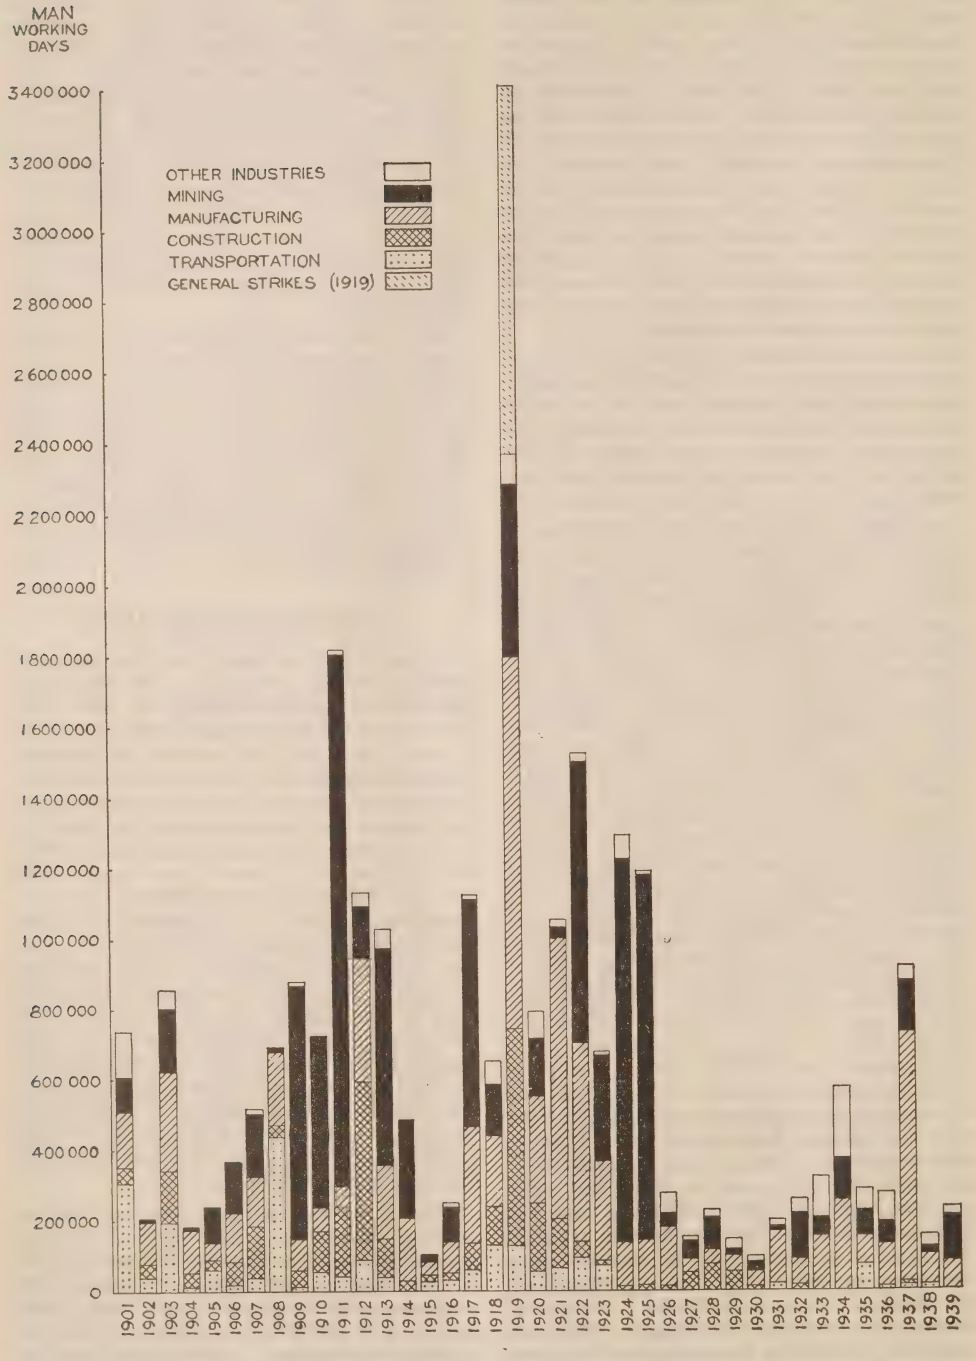
during which each strike lasted by the number of employees directly involved in the dispute from time to time so far as known and not replaced. The number of employees recorded for each dispute is the number of those directly involved, that is on strike or locked out, and does not include those indirectly affected. The figures in the tables as to workers are therefore the number of those directly involved. In recent years, when the information is available, the numbers indirectly affected have been shown in footnotes to Table X, which is a detailed list of the strikes and lockouts during the year. The workers indirectly affected in each dispute are those in the establishment who are unable to continue work because of the stoppage but not participating in the dispute.

The statistical tables do not include minor disputes as described in a previous paragraph, nor disputes, previously recorded, as to which information has been received indicating that employment conditions are no longer affected but which the unions or organizations concerned have not yet declared terminated.

Information is available as to the following disputes of this nature still on record at the end of 1939: coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; dairy employees, Toronto, Ont., September 17, 1937, one employer; lithographers, London, Ont., August 31, 1938, one employer; bakers and helpers, Vancouver, B.C., November 11, 1938, one employer; stationary engineers, Toronto, Ont., March 2, 1939, one employer; fur factory workers, Toronto, Ont., October 17, 1939, one employer; and work clothing factory workers, Winnipeg, Man., December 1, 1939, one employer. Information is also available as to another dispute of this nature which was carried over from 1938 but terminated during 1939, namely: lime plant employees, Blubber Bay, B.C., commenced June 2, 1938, in the plant of one employer and lapsed during August, 1939.

Charts

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in Mining considerable time loss occurred in 1909, 1910, 1911 and 1913, and again in 1917, 1922, 1924 and 1925, while in 1932, in 1934 and again in 1937 and 1939, time loss was greater than in the other years since 1925. In 1919 the time loss due to general strikes is shown separately. In Manufacturing considerable time loss occurred in metal manufacturing in 1919, 1920 and 1937; in clothing (including textiles, furs, boots and shoes, leather, etc.) in 1903, 1908, 1912, 1914, 1917, 1919, 1925, 1926, 1930, 1931, 1932, 1933, 1934, 1936, 1937 and in 1939; in cigar manufacturing in 1901; in printing in 1921, 1922, 1923 and 1924; and in saw-milling in 1931 and 1932. In Construction time loss was considerable in 1912 and 1919. In Transportation, etc., there was considerable time loss only in 1901, due to a strike of trackmen; in 1903 due to a strike of railway clerks and freight handlers throughout western Canada, and a strike of longshoremen at Montreal, with a sympathetic strike of teamsters; and in 1908, due to a strike of railway shop machinists. In Other Industries considerable time loss was due to strikes of fishermen in 1901, to strikes of loggers in 1919, 1920, 1933, 1934 and 1935.



From the chart showing results of the disputes it appears that the majority of employees were successful or partially successful in 1901, 1902, 1907, 1915, 1916, 1917, 1918, 1926, 1930, 1931, 1932, 1933, 1934, 1935, 1936, 1937, 1938, and in 1939, but were unsuccessful in 1908, 1921 and 1923. In 1919, a large percentage of the workers who were unsuccessful were involved in the general strike at Winnipeg and in general strikes in other localities in sympathy with it.

Analysis of Statistics, 1939

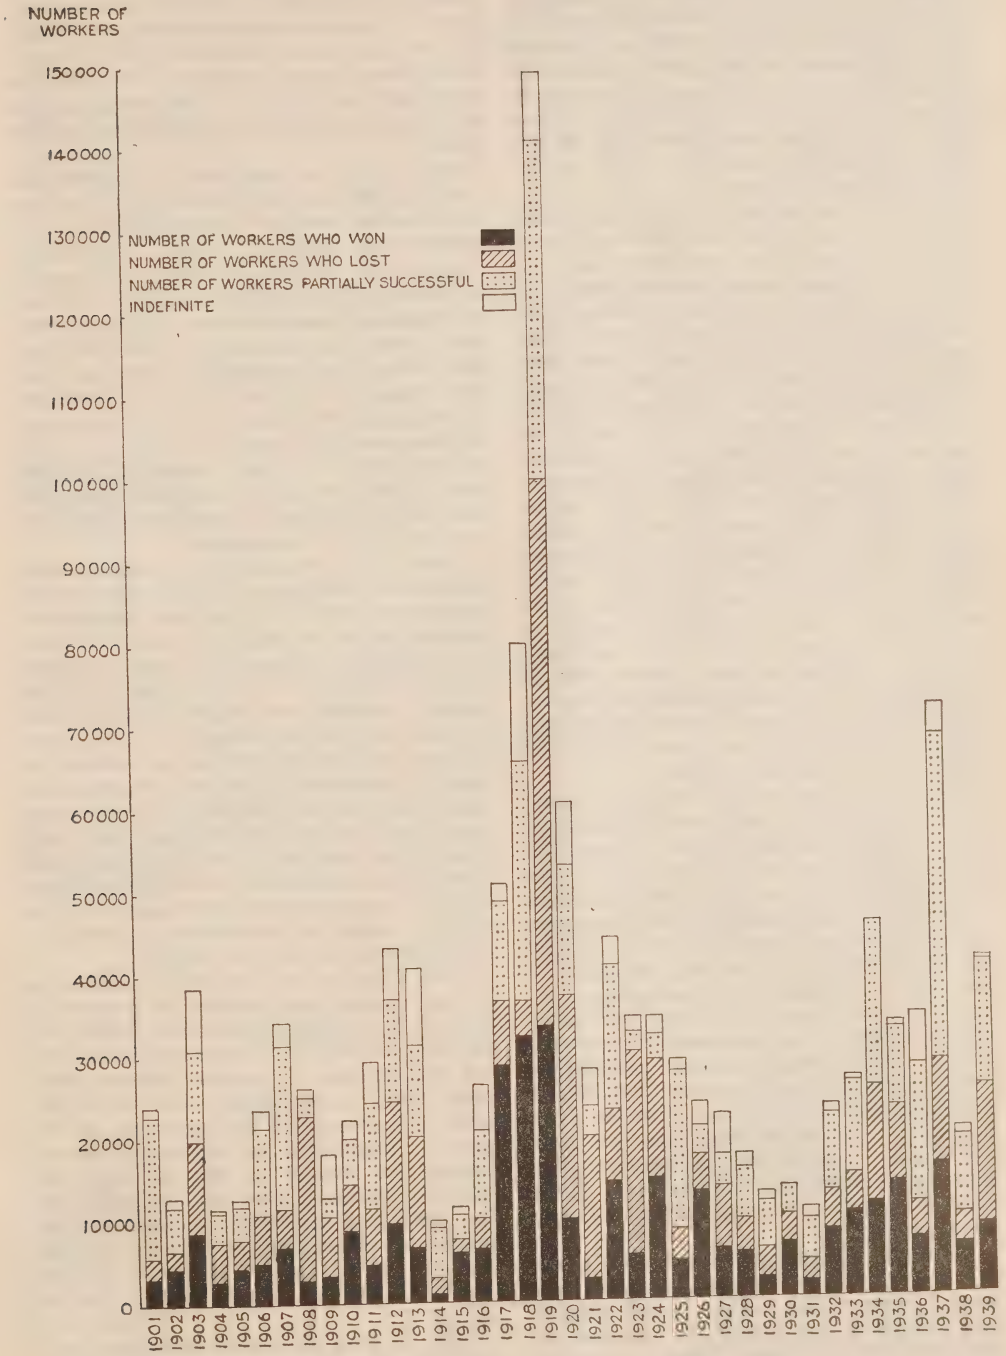


Table I is a summary of the principal statistics for the period for which the record has been compiled, beginning in 1901. The table shows the number of disputes beginning in each year and the number in existence during the year, the difference in each case being the number of disputes carried over at the end of the previous calendar year. A small number of disputes have been carried over at the end of every year except 1903, 1929 and 1934. The approximate number of employers involved in all disputes as well as the number of workers involved and the time loss, is given. In addition to these data, the number of disputes in existence during each year in coal mining and in industries other than coal mining is given, along with the number of workers involved and the time loss. A study of the latter figures reveals that a few disputes in coal mining in some years account for a large proportion of the workers involved and for a still larger proportion of the time loss resulting.

Table II, an analysis by numbers of workers involved, shows that half of the disputes directly affected less than 100 workers in each case, a total of only 2,249, or six per cent of the total in all disputes, and caused time loss of only 15,740 days, seven per cent of the total for the year. Thirty-eight disputes, however, involved between 100 and 500 workers

LOSS IN MAN WORKING DAYS THROUGH STRIKES AND LOCKOUTS BY GROUPS OF INDUSTRIES EACH YEAR, 1901-1939

RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBERS OF WORKERS INVOLVED EACH YEAR 1901-1939

in each case, 8,186 in all, nearly 20 per cent of the workers in all disputes, with time loss of 92,373 days, approximately 40 per cent of the total for the year. There were 11 disputes each of which involved between 500 and 1,000 the total for the year. Eleven disputes involved between 500 and 1,000 workers each, 20 per cent of all workers, and caused 20 per cent of all time loss. Eleven disputes involved over 1,000 employees each, 55 per cent of all workers and 32 per cent of the total time loss for the year.

Table III, an analysis by time loss, shows that 35 per cent of the time loss was due to only five disputes, and that 56 per cent was due to 31 disputes which involved nearly 60 per cent of the workers in all disputes. There were 86 disputes, each of which caused time loss of less than 1,000 days, and of these there were 31 which caused less than 100 days each.

Table IV, an analysis by duration shows that 72 disputes, 59 per cent of all during the year, lasted less than 5 days but these involved nearly 75 per cent of the workers in all disputes and caused 25 per cent of the time loss for the year. Many of these were in the coal mining industry. Disputes lasting between five and ten days were 18 in number and caused nearly 15 per cent of the time loss for the year. Over 30 per cent of the total time loss was due to 10 disputes lasting over 25 days and these involved only five per cent of the workers in all disputes. Two disputes were carried over from 1938 and two were unterminated at the end of 1939. One in each case caused considerable time loss during 1939.

Table V, an analysis by provinces, shows that 44 disputes or over one-third occurred in Nova Scotia (mainly in coal mining) and that these involved nearly three-quarters of the workers during the year and resulted in somewhat less than one-half of the total time loss. Ontario was affected by the next largest number of strikes, 34, involving one-eighth of the workers and slightly over one-quarter of the time loss. In Quebec there were 18 disputes and in Alberta ten, the latter all in coal mining. There were two small disputes in Prince Edward Island, four each in British Columbia and Manitoba and five in New Brunswick. In Saskatchewan there was only one dispute involving 400 coal miners with a time loss of 14,000 man-working days. There were no strikes of an interprovincial nature during the year.

Table VI, an analysis by industries shows that the fifty disputes in mining involved over three-quarters of the workers in all disputes and resulted in over half of the time loss for the year. The forty-three disputes in manufacturing involved nearly twenty per cent of the workers and resulted in thirty-six per cent of the time loss. Over half of this was caused by six disputes in rubber products and one-third by 19 disputes in textiles, clothing, etc. Most of the remaining time loss was caused by one of the four disputes in trade, that of 400 fish handlers at Lockeport, N.S., from the latter part of October to the middle of December, the time loss being 18,000 man-working days.

Table VII, an analysis by causes and results shows that there were thirty disputes to secure an increase in wages in which the workers were successful in three and partially successful in fourteen but were unsuccessful in twelve. There were 6 strikes for increases in wages and other changes. Only 7 disputes were against decreases in wages and in these the workers were successful in one and partially successful in the other six. Questions of unionism were again an important factor as there were 35 disputes of this nature, 11 being strikes for union recognition. There were 13 disputes against discharge of workers and these involved over nine thousand strikers, over half being unsuccessful.

Table VIII, is an analysis by Industries and Methods of Settlement. Nearly one-third of the disputes were settled by direct negotiations between the parties involved, nearly one-third by conciliation or mediation, and one-third by return of workers. The disputes in the last category involved over 25,706 workers out of 41,038 in all disputes during the year. Most of these were in coal mining, an industry in which it is generally the rule under agreements that strikers must return to work before negotiations or an investigation may take place. There were only eight disputes recorded as settled by replacement of workers and these involved comparatively few strikers. Of the disputes settled by conciliation, 22 were in manufacturing and ten in mining.

Table IX, gives an analysis by months for the past eleven years, showing the number of disputes commencing during each month, as well as the number of disputes in existence, and the number of workers involved each month, both in new disputes and in all disputes in progress, with the total time loss by months. Until 1931 the largest number of disputes was usually in May or June due chiefly to strikes in the building trades but since 1930 there have been comparatively few disputes in the construction industry. During 1938 and 1939 the greatest number of disputes occurred in October. Many of these were in mining.

Table X, gives the list of strikes and lockouts in existence during the year, with details as to causes, results, dates, etc.

TABLE II.—STRIKES AND LOCKOUTS, 1939, BY NUMBER OF WORKERS INVOLVED

Number of workers involved	Disputes		Workers involved		Time loss	
	Number	Per cent of total	Number	Per cent of total	Man working days	Per cent of total
1,000 and over	11	9·0	22,650	55·2	72,300	32·2
500 and under 1,000	11	9·0	7,953	19·4	44,175	19·7
100 and under 500	38	31·1	8,186	19·9	92,373	41·1

Strikes and Lockouts in Other Countries during 1939

THE accompanying tables give the principal figures as to strikes and lockouts in other countries since 1919, as compared with Canada, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man-working days in those countries for which such figures are available. Throughout the year the latest available figures (including those from annual reports) for each country are given in a monthly article in the LABOUR GAZETTE.

Methods of compilation of trade dispute statistics vary greatly in various countries. In some countries figures as to strikes and lockouts are published separately, but where possible, they have been included together in the table here given. In some cases the number of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year and in still other cases it is the number in existence during the year, including those carried over from the previous year with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly affected, that is thrown out of work by disputes to which they were not parties; but exact information on this point is not always given. In the table given herewith the column showing numbers of employees involved include figures for the numbers directly involved or the total number directly and indirectly involved according to the method adopted by the country concerned.

For some countries figures as to time loss, that is the number of "man-working days" lost, are not given.

Footnotes to the table indicate the nature of the statistics with reference to the above points.

Many countries publish statistics dealing with trade disputes only once each year or even less frequently, the figures being issued in some cases after an interval of some length. Most countries revise their figures when additional facts are brought to light, even though such revisions may necessitate changes in statistics published a considerable time previously.

In most cases the statistics dealing with disputes in other countries, published in the LABOUR GAZETTE are obtained from official publications of the countries concerned, but in some cases the information is obtained from publications of the International Labour Office of the League of Nations.

Very few countries with the exception of Canada and the United Kingdom give detailed accounts of individual strikes in their official publications. Where information as to such disputes appears in this annual article or the monthly article in the LABOUR GAZETTE, it is obtained chiefly from newspaper reports. It should be noted, in this connection, that the amount of material on labour matters appearing in the press is dependent upon its relative importance, in comparison with other events occurring at any given time.

In time of national emergency many countries restrict the right to strike or do not publish or allow to be published details of industrial disputes. For this reason recent statistics are not available for Austria, Czechoslovakia, Finland, France, Germany, Italy, Poland and Spain.

Great Britain and Northern Ireland

The number of trade disputes involving stoppages of work in Great Britain and Northern Ireland which began during 1939 was 930 as compared to 875 in the previous year. Including about 1,000 workers involved in eight disputes which began in 1938 and extended into 1939, the total number of workers, either directly or indirectly involved in all disputes which were in progress during 1939, was about 337,000, the comparable figure for 1938 being 275,000. The time loss was estimated at about 1,344,000 man-working days during 1939 as compared with 1,334,000 during 1938. The disputes of 1939 were approximately evenly proportioned as between the eight pre-war months and the four wartime months.

There were no disputes of major importance during 1939 and in only four instances were 5,000 or more people involved. A stoppage of tinplate workers at a number of establishments in South Wales and Monmouthshire affected about 7,000 workers and about 40,000 working days were lost. Nearly 6,000 workers at collieries owned by one firm in Glamorganshire were involved in a dispute which lasted three days. About 25,000 working days were lost by about 5,400 building trade workers during a dispute in Dorsetshire. Colliery workers employed by several firms in North Wales and numbering about 5,000, were involved in a short stoppage in which 12,500 working days were lost. One protracted dispute affecting nearly 5,000 employees of a London firm of electrical engineers and cable makers resulted in the loss of about 60,000 man-working days.

A statistical analysis of strikes in Great Britain and Northern Ireland during 1938 was published in the *Ministry of Labour Gazette* for May, 1939, and was reviewed in the Labour Gazette, July, 1939, page 663. This article contained more exact and more detailed figures than are available at present for 1939. Presumably a similar analysis will appear later in the present year in which case it will be summarized in the Labour Gazette.

United States

Complete statistics of industrial disputes in the United States during the year 1939 have not yet been published. The annual analysis of the statistics of industrial disputes for the year 1938 was published in the May, 1939, issue of the *Monthly Labor Review* and was summarized in the Labour Gazette, July, 1939, page 665.

The unrevised figures for the first eleven months of 1939 show that there were about 2,300 strikes in progress during this period as compared to about 2,339 in the same months of 1938. The number of workers involved in these strikes was approximately 1,130,000 as compared with about 640,000 involved in strikes in the first eleven months of 1938. The time loss in the first eleven months of 1939 was about 17,200,000 man-working days while the figure for the corresponding period of 1938 was 8,250,000 man-working days.

The largest strike in the United States during 1939 was one which occurred in the bituminous coal mines in the Appalachian field (Pensylvannia and so on). It began on April 3, when negotiations between the operators and the United Mine Workers of America for a new agreement broke down. Agreement on questions of wages and hours was reached quite early in the negotiations, both sides having agreed to a continuation of the wage rates and schedules of hours contained in the previous agreements. The union demanded that they be granted a closed shop or that the clause in the former agreement imposing a penalty against unauthorized strikes be removed. Under an agreement that was reached May 13, the employers granted the workers a "union shop" under which all new employees would join the union. The negotiations were carried out by the Appalachian "conference", including 150 representatives of 21 bituminous coal associations. When an agreement was reached six of the owners' associations withdrew, refusing to accept its terms, but the operators making up the other 15 associations are said to employ more than 300,000 and most of the strikers who were reported to number 420,000 at one time were able to return to work on May 15. An agreement covering the remainder, who were mainly situated in Kentucky, was reached on July 20.

On July 5, the United Automobile Workers affiliated with the Congress of Industrial Organizations at Detroit called a strike of tool and die makers employed by the General Motors Corporation. The union sought a contract for these skilled workers supplementary to that which it had already secured for the workers on the assembly line. Among the union demands were (1) union labels on all auto parts; (2) uniform hiring rates; (3) wage increases of at least 10 cents per hour; (4) increased rates for overtime; (5) a standard apprentice system. The strike began when about 800 men at one plant in Detroit ceased work but it soon spread until about 7,500 skilled workers at plants in Flint, Pontiac and Cleveland were directly involved and as a large part of the industry is dependent on the tool and die makers for materials about 100,000 workers, a large part of whom were in sympathy with the strikers, were indirectly affected. An agreement was reached on August 4, and work was resumed on August 7. While the employers stated that no general wage increase had been granted, the union claimed that since all wage scales had been adjusted to conform with those paid in the plant in which rates were highest, the settlement had the effect of a general increase. The union also stated that for the first time the General Motors Corporation had signed a general wage agreement whereas previously wage rates had been subject to negotiations in individual plants and that the bargaining position of the union was greatly strengthened. The workers also received concessions in regard to overtime rates.

WARTIME PRICES AND TRADE BOARD

Review of Activities During Four Months' Operation—Action Regarding Certain Commodities

THE Wartime Prices and Trade Board has issued recently a review of its activities from September 3 to December 31, 1939, together with press releases which summarize more recent administrative action.

The following article constitutes a composite review of its administration based upon official press releases.

At the outbreak of war, the Government took immediate steps to assure an adequate and continuous distribution of the necessaries of life at reasonable prices, to eliminate hoarding and profiteering, and to curb those who otherwise might endeavour to turn national needs into personal profits. On the day that Great Britain declared war, the Wartime Prices and Trade Board was appointed by order-in-council. (Labour Gazette, September 1939, pp. 889-893). The Board is endowed with wide powers permitting, wherever necessary, an adequate control of the production and distribution of the necessaries of life. These powers were re-enacted and extended by order-in-council on December 5, 1939. (Labour Gazette, December, 1939, page 1201). The chief function of the Board is to protect the consumer from exploitation.

The Board met immediately upon its appointment, and quickly assembled a small technical staff, chiefly borrowed from other government departments. Complete information and statistics on the production and distribution of a wide variety of foods, clothing and fuel were rapidly compiled.

Scope of Activities

During the first four months of its operations, the Board has conducted investigations into the distribution and sale of some forty different commodities. These investigations varied in character and extent. Some involved merely alleged instances of hoarding and profiteering on the part of individuals; with others it was necessary to co-ordinate a whole industry and its distributing agencies in order to assure an adequate distribution of some one commodity to the consumer at a fair price.

The Board and its technical staff have conducted investigations into the supply and distribution of sugar, textiles, butter, leather, fuel, beans, flour, mill feeds, cod liver oil and other necessaries; conferences have been held with the representatives of many industries; investigations of commodity speculations have been undertaken; administrators have been appointed; goods have been purchased from the United Kingdom; co-operation has been obtained from the provinces on the enforcement of hoarding and profiteering regulations; and a constant check has been kept on retail prices from Halifax to Vancouver to assure that retail prices are in line with the prices of raw materials and with wholesale prices.

Other Efforts

In addition to continuous efforts such as these and of a kindred nature, the Board has also followed up score upon score of complaints of hoarding; it has corrected abuses; and in a few instances it has prosecuted.

Similar steps have been taken to prevent profiteering. The Board has queried hundreds of dealers regarding their prices, and in this way—without labelling many thoughtless and foolish individuals as criminals—it obtained satisfactory results. Here again where circumstances warranted, legal steps have been taken. But the Board is seeking to achieve results by means other than recourse to law. Its objective is to create an enlightened and effective public opinion, rather than an imposing record of criminal convictions.

In many instances, the Board has been able to take vigorous, but quiet action to stabilize both wholesale and retail prices. Its mere existence has discouraged many who might otherwise have tried to turn a penny at the expense of their country.

Obtaining Data

In order to protect the consumer the Board has had to give special attention to building up statistics of inventories and supplies. In several industries it is now maintaining a constant record of production, distribution and the location of existing stocks of goods.

All the steps taken to date have been designed to encourage production and conservation, to prevent individual hoarding and the holding of commodities for a price rise, and to eliminate undue markups and unwarranted price increases.

In the attainment of the ends desired, the Board has avoided any unneeded prosecution of hoarders and profiteers, or regimentation of industry; it has sought results through the voluntary co-operation both of industry and the public. The principle guiding its activities in the stabilization of prices has consisted of efforts to provide an adequate and regular flow of supplies to the Canadian market, rather than in any attempt at widespread price-fixing or price control.

Principles of Control

The Board has acted on the belief that if ample supplies are available, freedom of enterprise encouraged, monopolistic tendencies curbed or controlled, and sporadic instances of profiteering dealt with, fair and reasonable prices would be maintained. It is the belief of the Board that "such policies are best suited to, and can most effectively harness the resources of our present economy, an economy of plenty."

Should the war and the future course of events create a genuine scarcity of supplies on this continent, Canadian policies of price control might have to be modified to meet changed conditions. But for the present the Board does not anticipate an extensive use of its reserve powers.

The Board's review then details the early action taken with respect to sugar, wool, coal, hides and leather, butter, etc. (These activities have been summarized in the issues of the LABOUR GAZETTE for September, October, November and December.)

Coal Supplies

In regard to coal, the Board, after outlining the successful operation of its licensing plan (LABOUR GAZETTE, November, 1939, page 1103) brings the situation up to date by referring to efforts to assure an adequate supply of shipping to handle Maritime coal in the St. Lawrence during the coming navigation season, and states:

"Canada is assured of adequate supplies of coal during the current season. Imports of anthracite into the Dominion during 1939 have been greater than normal. As a consequence, the efforts of the Board and the Administrator have largely been directed to making provision for future needs particularly in relation to the supply from overseas and abroad, and its possible domestic allocation."

Butter Investigation

Referring to the results of the investigation into increased butter prices (following receipt of a great many complaints which alleged speculation) the Board stated:

On September 14, the Board carried out an investigation through the Auditors of the Customs and Excise Division, Department of National Revenue. This investigation covered thirty-three companies in Montreal and seven in Toronto. The records of the brokers, wholesale dealers and warehouses provided the name and occupation of each holder of butter who had made purchases between September 5 and 14, and the quantity and grades purchased and paid for.

This investigation was later widened and on October 3, the Board received a report showing all holders of butter as of September 26 in Quebec, Montreal, Toronto, Winnipeg, Edmonton and Vancouver.

The report of this wider investigation revealed that between September 14 and September 26 the number of speculators had decreased. But these and other investigations conducted by the Board also revealed that butter was held by speculators in comparatively small amounts, and that the rise in prices following the outbreak of war could not be attributed solely either to their purchases or to their holdings. It appeared that the increased prices were largely due to heavy purchases by the trade which, it was stated, were necessary to meet the expectation of a greater demand during the coming year.

The survey, however, was not devoid of results. In the first place, the investigation had a definite effect in stabilizing prices, and secondly, when it became known that the Board knew the names of all holders of butter, within less than one week alone speculators returned to the normal channels of trade no less than 330,000 pounds of butter.

In its investigations into butter prices the Board was assisted by the staff of the Agricultural Supplies Committee, with which a constant contact was maintained.

Existing Wool Situation

In an analysis of the wool situation the Board indicated that:

"The difficulties which have been encountered during the last four months of 1939 in the effort to maintain the flow of raw materials to the Canadian woollen industry have been substantial. Canada more than almost any other country is dependent on the crossbred types of wool which are used in the manufacture of warm, durable outdoor clothing, socks, blankets, hand knitting and papermaker's felts. In time of war, these grades are also the types most required for uniforms."

CROSSBRED WOOLS

The Board further stated:

"Over 80 per cent of Canada's normal supply of crossbred wool must be imported. The British Government controls the entire Empire supply which normally provides the import needs of the Dominion. The crossbred wools released for use in Canada since the beginning of the war have been sufficient to cover only about one-third of the requirements of military contracts let during that period. But the military needs of Great Britain are very large, and under war conditions delays were unavoidable in the completion of export marketing arrangements in Great Britain and Australasia. An economic war can only be waged by economic methods, and it is unfortunate that the development of one of these methods, temporarily interrupting the flow of wool to Canada, has led to periods of difficulty and anxiety in this country. It is hoped that the task of organization, for which the British Wool Control is mainly responsible, is well advanced towards completion, and that a large movement of supplies may now be expected."

On February 28, the Board announced that arrangements have now been completed whereby Canada's entire requirements of wools for military purposes up to September 10, 1940, will be forthcoming from the United

Kingdom Wool Control. The details have been worked out between the United Kingdom Controller and the Canadian Wool Administrator, David C. Dick, whose certificate as to its intended use will continue to be required in connection with all wool imported for military contracts.

In addition, the Board announced that arrangements now entered into with the United Kingdom Control guarantee until September next a larger and more regular supply of crossbred wools for civilian purposes. These up to the present have been extremely difficult to secure from any Empire source, and assurance of a greater volume, even though not on the basis of full normal requirements was considered as fortunate for Canada.

With the announcement of assurance of supplies until September next is concluded what might be described as the first chapter of the Canadian wartime story of wool. This opened in September last with frantic searchings for wool by manufacturers with military contracts, and it records numerous important developments such as the appointment of a Wool Administrator; the placing of an embargo upon the export of crossbred wools from Canada; the suggestion by wool dealers and the recommendation by the Wool Administrator to the War Supply Board of a 45 cent clean basis content for wool to be used in military contracts; the fixing of a price of 45 cents clean basis by Order in Council for the purpose of making available Canadian stocks of crossbred wools which were not moving readily to market; the cancellation of the price-fixing Order when it had served its purpose; the removal of the duty on crossbred wools imported from Intermediate Tariff countries at a time when supplies from Empire sources seemed likely to prove insufficient for immediate requirements; and, finally, the cancellation of the free entry privilege as part of the arrangement now reached with the United Kingdom Controller.

PRICE OF WOOL

Subsequently on March 9, the Board issued another release on the Canadian wool supply which, in its concluding paragraphs, dealt with the price angle of the wool situation. Extracts from this release are as follows:—

While the wool clips in Australia and New Zealand have been abundant, indeed abnormally large, and while there appears to be no probability of any scarcity of wool in Canada, nevertheless crossbred grades will have to be used with economy.

While adequate supplies of wool have thus been arranged, nevertheless the price of wool in Canada is higher than before the war. This is due solely to the higher prices which must be paid for imported wools; these constitute about four-fifths of the total Canadian consumption.

Canadian spinners are now paying anywhere from 65 to 100 per cent more than pre-war prices for their raw materials.

While the cost of wool generally in Canada depends on the price abroad, nevertheless steps have been taken to assure that the ultimate consumer does not bear more than his fair share of the burden.

While retail buyers of wool will naturally have to pay prices varying with the price which the Dominion must pay for its imports of raw wool, and while crossbred grades will have to be used with economy, there is no reason under existing conditions to anticipate any serious shortage in the total wool supply of the Dominion.

KNITTING YARNS

To protect the purchaser of hand knitting yarns, the Wartime Prices and Trade Board initiated an investigation of prices in retail stores and mail order houses. It was found that price movements in the retail trade were not out of line with the prices at which they had purchased their stocks. Indeed some well known brands of yarn continued to sell at pre-war prices up to the end of 1939.

As retailers have replenished their stocks of yarn, prices have increased, but under the pressure of competition in the retail trade, the increase in many instances appears not to have fully reflected the advance in raw material costs.

Price increases have varied with different grades of yarn. Coarser yarns, selling at lower prices, have shown the largest percentage increases; such yarns not only require the use of crossbred wools, but also in their production the cost of materials represents a comparatively large proportion of the retail price.

With the finer merino yarns, there has been less difficulty in obtaining a supply of raw material, and the demand has not increased to the same extent. Retailers in many instances appear to have sacrificed a part of their customary percentage margin.

Canadian Feedstuffs Situation

To assist it in maintaining close touch with the feedstuffs problem in Canada, the Wartime Prices and Trade Board has appointed a small committee, representative in general though not directly of the users of such feeds, the agricultural industry. The committee, which held its first meeting at the Board's offices in Ottawa on February 23 is composed of Mr. F. W. Walsh, Chairman, and Messrs. C. B. Davidson and W. R. White.

Mr. Walsh is Director of Marketing in the Department of Agriculture of the province of Nova Scotia. Mr. Davidson, Winnipeg, was formerly statistician to the Wheat Board, and Mr. White is a prominent officer in the Feedstuffs Branch of the Federal Department of Agriculture. The committee necessarily will seek the co-operation of the grain trade, the milling industry, and the manufacturers and distributors of live-stock feeds, as well as of the various provincial feed committees.

Other Commodities

The Board's vigilance in investigating the situation with respect to other commodities is indicated in the following paragraphs.

COD LIVER OIL

In November, the Department of Pensions and National Health directed the attention of the Board to the situation developing in the

supply of cod liver oil. The war had seriously curtailed British and Norwegian exports on which the Dominion largely depended for supplies.

The Board immediately began an investigation covering the foreign and domestic sources of supply, the domestic inventories, and the amounts needed for human, animal and other needs. This revealed the possibility of a serious shortage during the coming year.

With a view to increasing the domestic supply, a group of domestic producers were interviewed and the subject was called to the attention of the Economic Council of Nova Scotia.

The Board is continuing its endeavours in this field. Efforts are being initiated to provide substitutes for animal, industrial and other needs in order to augment the supply for human consumption.

BEANS

In the middle of September the price of beans rose very sharply. The situation was aggravated by the extravagant bidding of buyers before the 1939 crop had really begun to come on the market. Moreover, up to the outbreak of war low prices had obtained in the market for beans.

The Board conducted an investigation into the situation. No instances of hoarding, withholding supplies, or profiteering were observed. During the course of the investigation prices began to ease; they have since declined from the September levels.

PETROLEUM, MEAT, AND CASTOR OIL

The Board has had under review the question of the supply and price of petroleum and petroleum products. Meat prices have been carefully watched, and several specific inquiries in this connection undertaken. Also presently under review are castor oil and other oils and waxes.

In October the question of the supply of meat meals and tankage was brought to the attention of the Board. After a preliminary investigation, the matter was referred to the Agricultural Supplies Committee for further study the results of which will later be available to the Board.

During the first four months of its existence, the Board also conducted a variety of minor studies many of which consisted only of investigations into alleged instances of hoarding or profiteering in some one commodity.

Concurrently with studies and investigations on commodities of which the supply presented immediate problems, the Board has held many conferences with individuals and with representative groups engaged in the supply of those necessaries for which the demand might later begin to exceed the supply. An effort has been made to foresee and to meet supply problems before they have reached that acute stage which creates public uneasiness and a danger of exaggerated prices.

Immigration to Canada During 1939

During 1939 a total of 16,994 immigrants entered Canada compared with 17,244 in 1938, a decrease of 1·4 per cent, according to statistics contained in a statement issued by the Immigration Branch of the Department of Mines and Resources.

Of the 16,994 who entered the Dominion, 3,544 were from the British Isles; 5,649 from the United States; 1,957 from Northern European countries, while other races numbered 5,844. Compared with the figures for 1938, an increase of 4·6 per cent was recorded in the number coming from the British Isles; a decrease of 3·2 per cent in those from the United States; an increase of 49·2 per cent in the number classified in the group "Northern European races." (This increase was largely due to the great number coming from Germany, 1,071 giving that country as their country of origin in 1939 compared with 588 in 1938). A decrease of 12·9 per cent was recorded in the "other races" group.

Adult males entering Canada during 1939 numbered 4,866; adult females, 6,820, and children under eighteen, 5,308.

Of these totals, 1,997 males, 1,236 females and 1,953 children were listed in the farming class. The labouring class comprised 317 males, 63 females, and 84 children; mechanics, 601 males, 271 females, 158 children; trading class, 712 males, 437 females, 219 children; mining class, 34 males, 8 females and 2 children; female domestic servants eighteen years and over numbered 662, under eighteen years, 116; "other classes" accounted for the remainder of the total, 1,205 males, 4,143 females, and 2,776 children.

Classified according to destination the largest number (5,957) were destined for Ontario; 3,433 for Quebec; 2,183 for British Columbia; 1,695 for Alberta; 1,316 for Manitoba; 1,227 for Saskatchewan; 747 for Nova Scotia; 353 for New Brunswick; 67 for Prince Edward Island; and 9 and 7 for the Northwest Territories and Yukon Territory, respectively.

RECENT REGULATIONS UNDER LABOUR LEGISLATION

Alberta Old Age Pensions Act

THE appointment of an Old Age Pensions Board was made by order in council gazetted on February 15. The new Board consisting of J. F. Percival, Chairman, A. Blackie, Superintendent and T. R. Blaine is to have the powers formerly vested in the Workmen's Compensation Board to carry out the provisions of the federal and provincial Old Age Pensions Acts.

Alberta Teachers Retirement Fund Act

By order in council gazetted on January 31, addition is made to the first by-laws passed by the Board of Administrators (Labour Gazette, 1939, p. 1230). It is now provided that a teacher who was not on March 31, 1939, under a contract of engagement with a board of school trustees in Alberta is not to be entitled to have taken into account any service rendered before his contributions to the fund begin but he is to be considered as having been under a contract on that date if he was absent on leave granted by the board or if a medical practitioner certifies that he was then physically unable to teach, provided the period of disability does not exceed five consecutive years; or if he was in attendance at a university or other educational institution approved by the board pursuing a course of study relating to the teaching profession, the period of attendance not to exceed five years; or if he was serving as a member of the House of Commons of Canada or of the provincial legislature or employed in the provincial civil service in duties related to the teaching profession. In none of these cases, however, is time so spent to be considered as teaching service. Teachers absent on March 31, 1939, on active service as members of the naval, military or air force or the nursing services of Canada are considered under contract of engagement.

Manitoba, Ontario and Dominion Adopt Canadian Engineering Standards Association Regulations

In Manitoba on January 27 and in Ontario on February 3 orders in council were gazetted adopting the 1939 regulations of the Canadian Engineering Standards Association governing the construction and inspection of boilers and pressure vessels and the Mechanical Refrigeration Code, 1939. The regulations came in force in Manitoba on January 1 and in Ontario on February 13.

The 1939 edition of the Association's Canadian Electrical Code was adopted for the National Parks by a Dominion order in council gazetted on February 10.

Quebec Fair Wage Act

Rules interpreting article 18 of Order 33 (Labour Gazette, 1939, p. 1113) concerning the sale of foodstuffs at wholesale were gazetted on February 10. The order having set out that when wages paid on September 1, 1939, are higher than fixed by the order they must be maintained, the rules determine how it is to be decided whether the weekly wage paid on that date does exceed the rates fixed by the order, having regard to the hours worked, the work-week to which the minimum rate applies and as to whether the minimum is an hourly or weekly rate.

An addition to the rules interpreting Order 4, gazetted on February 17, provides that the clauses of Order 4 dealing with minimum wages and working conditions, division into percentages and classification of apprentices do not apply to employees in unorganized territory not within the zones determined by Order 4. Other provisions of Order 4 apply to such districts. The Board gazetted on the same date a decision that Order 4 does not apply to hiring contracts for the current fiscal year of municipal corporations which by resolution have taken advantage of the order in council before its repeal.

By-law B-1 which imposes a levy on payrolls of one-third of one per cent was declared on January 31 to apply to all "professional" employers having employees in the province whether their establishments are located, or the work is done, in a municipality or in unorganized territory. This decision was gazetted on February 17 and also an amendment making the levy chargeable on wages actually paid even if higher than those fixed by the order and not on wages payable under the order as before.

Order 21 (Labour Gazette, 1939, p. 156) governing those engaged in tanning leather, currying hides and leather is annulled from February 10 when a collective agreement covering such establishments came into force.

Under Order 4 the application of the 60-hour week to saw-mills and foundries in Zones III and IV is now extended by order in council gazetted on March 2 to Zone II.

Saskatchewan Theatres and Cinematographs Act

An order in council published on January 31 alters the fees under this Act for operators of standard motion picture machines and the examination fee for an operator's licence. The former is reduced from $10 to $5 and the latter is raised from $5 to $10. However, it is provided that for successful candidates half of the examination fee is to be applied as payment for the operator's licence.

RECOMMENDATIONS OF CANADIAN MANUFACTURERS' ASSOCIATION CONCERNING QUEBEC LABOUR LEGISLATION

RECOMMENDATIONS concerning legislation in Quebec were submitted to the Quebec Government on February 10 by the Quebec Division of the Canadian Manufacturers' Association. The principal proposals affecting labour laws are summarized here.

Workmen's Compensation Act

As regards the Workmen's Compensation Act the desirability of doing everything possible to ensure the solvency of the Accident Fund was emphasized and with this end in view it was recommended: (1) that the Workmen's Compensation Commission should undertake an educational campaign for accident prevention in all industries showing a high accident rate and that the employers' safety associations should be urged to co-operate to the fullest extent in the campaign; (2) that there should be closer co-operation between the Workmen's Compensation Commission and the Factory Inspection Division of the Department of Labour; (3) that special attention should be directed to the small employers so that continuous attention should be given to accident prevention in their plants; (4) that the Commission might either re-insure with approved casualty companies for any compensation it might be obliged to pay in excess of a specified sum or it might require employers with a consistently high accident rate to take out a policy to cover any compensation exceeding a sum stipulated by the Commission.

Another recommendation had to do with the section of the Act giving to the workman the right to choose his physician. It was considered by the Association that the choice should be a matter of agreement between the employer and employee and where an agreement cannot be reached, the decision should rest with the Commission. It was urged also that the members of the Workmen's Compensation Commission should be appointed for life or during good behaviour and that the Commission should be free to employ the members of its staff instead of the Government having the right to dismiss the Commissioners and to appoint the staff. It was also suggested that the Government should contribute towards the expenses of carrying out the Act.

Collective Labour Agreements Act

The Collective Labour Agreements Act, as well as the Fair Wage Act, the Association considered, should not be amended until a thorough study of experience under them had been made by a competent commission appointed by the Government. If, however, it was proposed to amend the Act this year, certain proposals were advanced for consideration.

It was suggested that some of the difficulties in the application of the Act would be avoided if agreements applied "vertically to specified industries" instead of horizontally to trades and occupations. In the opinion of the Association, "when a given business or industry effects an agreement with its employees," all the employees in that industry should be covered by the agreement including the maintenance men, stationary engineers, etc., in addition to the workers employed in productive operations. Thus an industry or business would be subject to only one agreement under the Act. The shoe industry was referred to as an example of an industry to which at least three different agreements applied, that applying only to the shoe industry and the printing trades and building trades agreements.

Other recommendations relating to the Collective Labour Agreements Act which were made by the Association included the extension of Government control over the joint committees administering the agreements, the repeal of the clauses providing that agreements should not apply to departments of the provincial Government and that agreements could be made retroactive. Emphasis was placed on the necessity of clarifying the condition on which an agreement may be extended to non-parties, that it has acquired "a preponderant significance and importance for the establishing of conditions of labour, etc." Opposition was expressed to the granting of power to joint committees or trade unions to issue certificates of competency. It was stated that in some cases trade unions refused to issue competency cards to men whose union dues were in arrears. Joint committees, in the opinion of the Association, should be required to publish quarterly financial reports in the *Quebec Official Gazette* or in a newspaper in the districts concerned so that such information should be available to any employers or employees assessed by the committee. Fines imposed as a result of action brought by a joint committee should not, in the opinion of the Association, revert to the committee but should be paid to the Department of Labour for the general administration of the Act and the expenses of committees in

districts where their revenue is insufficient for proper enforcement. It was recommended also that inspectors should be appointed by the Department of Labour and not by the joint committees and that every joint committee should have on it a Government representative and, further, that no agreement should be negotiated between employers and employees except in the presence of an official of the Department.

The association urged that "every care should be taken by the administration to ensure in all its legislation the continuance of the open shop in industries in the province . . . . the Government should not sponsor legislation which might in any way prejudice the liberties and rights of such employees who fall within the category of unorganized labour." The sections of the Collective Labour Agreements Act and the Fair Wage Act relating to freedom of association, frequently referred to as Bills 19 and 20, should, in the opinion of the Association, be retained.

Other recommendations were made to the Government having to do with the licensing of canvassers and agents engaged in direct selling and with the taxation by certain municipalities of outside manufacturers and wholesalers delivering goods by motor truck within the limits of the corporation.

INTERNATIONAL LABOUR ORGANIZATION

Proceedings of 89th Session of Governing Body Featured by Discussion of War Problems

THE proceedings of the 89th session of the Governing Body of the International Labour Office, meeting in Geneva from February 1-5, were featured by a decision to hold the 1940 session of the International Labour Conference early in June (see page ... of this issue) and by discussion of the program of the I.L.O. for 1940 with its emphasis on special problems created by the war.

In submitting this programme the Director of the I.L.O., Mr. J. G. Winant, stressed the importance of the problem of migration as a consequence of the war. Although as long as hostilities continue there will be an almost complete stoppage of overseas emigration from Europe, it already appears probable that as a result of the war the lowering of the standard of living of European peoples will increase their need for emigration. It is, therefore, desirable that the necessary measures of national organization and collaboration be taken now. In order that the study of the problem may be actively pursued, Mr. Winant proposed to convene a meeting of the Permanent Committee on Migration for Settlement on the occasion of the June Session of the International Labour Conference.

Mr. Jouhaux, workers' representative (France) while agreeing with this proposal, stressed that the real outstanding problem of emigration was that of the freedom of movement. Certain restrictions against this in various countries should disappear, and no longer should free men be excluded from all countries.

Mr. Oersted, employers' representative (Denmark) endorsed Mr. Jouhaux's remarks.

Mr. Evans, British Government representative, stated that the problem of migration could not be separated from that of refugees. He was horrified at the barbarous policy which transformed honest citizens of good character into wandering vagabonds, driven across Europe homeless and hopeless.

After a discussion the Governing Body adopted as a whole the programme of work proposed by the Director of the I.L.O. This programme includes, in particular, studies on the following questions:

Men disabled in war: their right to compensation and their vocational and social rehabilitation;

Problems of organization of the labour market arising out of the war;

Vocational retraining as a continuous means of adapting the supply of labour to the demand;

The influence of the war and mobilization on national regulations concerning hours of work and rest periods;

The influence of the war and mobilization on the conditions of work of women;

The adjustment of wage rates to changing prices;

The adaptation of social insurance to mobilization and war;

The organization of medical labour inspection; and the family doctor, his training and functions;

Safety in the loading and unloading of ships;

Agricultural problems of Central and South America;

Industrial relations in colonial territories; and

The conditions of life of workers and their families (low-cost housing).

During the discussion on the Director's Report on the activity of the International Labour Organization, Mr. Justin Godart made a declaration in the name of the French Government on the application of international labour Conventions in time of war. (It will be remembered that a certain number of

these Conventions provide for the suspension of their provisions in case of "serious emergency" or of international conflict.) It had become necessary, he said, for certain countries which intend to defend the ideals of justice, morality and liberty, to take every possible measure for their legitimate defence, and it may therefore prove necessary for those nations to take exceptional measures. In that case they must be excused if they find it necessary in some cases to deviate from complete observance of the Conventions which they have ratified. The Director's Report states that exceptions could result only from special circumstances based on definite reasons or from cases of *force majeure*. At no time in history had States been faced by a more obvious case of *force majeure*, and in temporarily suspending the operation of certain Conventions they would not therefore be acting in a manner contrary to the spirit or the letter of Part XIII.

Mr. Jouhaux, workers' representative (France), stated that in fact the procedure of the I.L.O. would not prevent the Government of a country in a state of legitimate defence, from taking provisions suspending International labour Conventions, all the more so when it was a case of countries fighting for the very ideal of the Organization from which these Conventions came. But it should be clearly understood that any such provisions should only be taken after a consultation with the employers' and workers' organizations which have taken part in the adoption of those Conventions. Thus the principle of collaboration which is at the basis of international labour legislation would be safeguarded.

During the examination of the Director's Report on the activity of the International Labour Organization, the Governing Body took note with lively satisfaction of several important Government declarations.

In Great Britain, Lord Halifax, Secretary of State for Foreign Affairs, stated in the House of Lords that the Government fully approved of the decision of the I.L.O. to attempt to continue its work during the war as completely as conditions would allow, and affirmed the sympathetic interest of the British Government in the work of the I.L.O.

The British Minister of Labour, Mr. Ernest Brown, gave similar assurances before the House of Commons.

President Roosevelt, in his message to the American Labour Conference at Havana, expressed the sincere hope that there would be no lessening of the activities of the I.L.O. during the existing world emergency, and pledged his full collaboration in its constructive non-political international effort.

The "Declaration of Havana" was also noted, by which the Governments, employers and workpeople of the American Continent pledge their unwavering support for the continuance with unimpaired vigour of the efforts of the International Labour Organization to accomplish its high purpose of achieving social justice.

In reaffirming the support of Brazil for the I.L.O. before the Governing Body, Mr. Helio Lobo declared that, in order to help in the present financial situation, his Government had already paid its whole contribution to the I.L.O. budget for 1940.

Mr. Evans stated that, with the same intention, the British Government would pay its whole budgetary contribution for 1940 at the beginning of the British financial year, in April next.

The period for which the present Governing Body was elected expires this year, and a new Governing Body will be elected by the International Labour Conference next June. It will be remembered that the Governing Body is composed of 32 members—16 representing Governments, 8 the employers, and 8 the workers. Eight of the 16 Government members are appointed by the Governments of the States Members of chief industrial importance. Two vacancies have now occurred on this list of eight States. Italy ceased to belong to the International Labour Organization from 15 December 1939. The Union of Soviet Socialist Republics automatically became a Member of the Organization in virtue of its admission to League of Nations membership on 18 September 1934, which involved membership of the International Labour Organization. The officers of the Governing Body noted that on 14 December 1939 the Union of Soviet Socialist Republics ceased to be entitled to automatic membership of the Organization.

Italy and the U.S.S.R. will be replaced on the list of the eight States Members of the International Labour Organization of chief industrial importance by Belgium and The Netherlands.

In conclusion it was decided that the Governing Body will hold its next meeting at Geneva before the opening of the Session of the International Labour Conference on 5 June next.

During February there were 5,502 accidents reported to the Ontario Workmen's Compensation Board, as compared with 5,542 during January, and 4,333 during February a year ago. Benefits awarded amounted to $563,790.42, of which $451,523 was for compensation, and $112,267.42 for medical aid.

ANNUAL REVIEW OF BUILDING PERMITS ISSUED IN CANADA DURING 1939

ACCORDING to revised statements furnished to the Dominion Bureau of Statistics by municipal officials, the value of the construction work for which building permits were taken out in 58 cities was slightly lower in 1939 than in 1938, but with this exception, last year's total was the highest since 1931. The estimated cost of the building authorized in the year under review was $60,272,379; as compared with $60,817,332 in 1938, this was a decline of $544,953, or 0·9 per cent, but there was an increase of $4,427,380, or 7·9 per cent as compared with the total of $55,844,999 reported in 1937, when building in these centres was more active than in any of the five years immediately preceding.

In the nineteen years, 1920-1938, the value of the building authorized in the co-operating municipalities was estimated, on the average, at $112,469,391 annually, of which the 1939 total constituted only some 53·6 per cent. In the first twelve years of this period, the estimated cost of the construction work for which permits were taken out averaged $153,401,364. Beginning with 1932, there was a sharp decline in building authorizations, and in the seven years to 1938, their average value was only $42,300,295; the 1939 total exceeded this average by 42·5 per cent. While the inclusion of last year's figure raises the annual average since 1931 to $44,546,805, this was little more than 29 per cent of the average for the years, 1920-1931, when building activity was, on the whole, at a more normal level. The moderate improvement indicated in the construction authorizations during the last two years has therefore had comparatively little effect upon the reserve of building work accumulating in the 58 cities.

The wholesale prices of building materials in 1939 were fractionally higher, on the average, than in 1938, and also exceeded those for any other year since 1930 except 1937. They were, however, lower than in the period, 1920-1930, being also below the average for the nineteen years, ending with 1938. The index of wholesale prices of construction materials, as calculated in the Internal Trade Branch of the Dominion Bureau of Statistics on the 1926 average as 100, averaged 89·7 in the year under review, as compared with 89·1 in 1938, while the average index in the years, 1920-1938, was 97·4. The cost of building labour in 1939 was also slightly higher than in the preceding year, according to the Labour Department's index of wage rates, based on the 1913 average as 100. This index was 170·7 last year, compared with 169·4 in 1938. During the twenty years for which building permit figures are available for the 58 centres, the maximum wages index was 203·2 in 1930, while the minimum was in 1913, the basic year.

In 1939, the 58 cities reported that the work authorized in connection with dwellings was valued at $21,657,273, an increase of $1,583,676, or 7·9 per cent, as compared with the 1938 total of $20,073,597; this advance was not so pronounced as that of 12·4 per cent recorded in 1938 over 1937. There was a decline in the number of permits issued for new construction or for repairs and alterations to houses and apartments, but the average value of the building represented by the individual permit advanced from approximately $3,095 in 1938 to $3,553 in 1939.

The *MacLean Building Review* makes a monthly tabulation of the value of construction contracts awarded throughout the Dominion; during 1939, the total was $187,178,500, compared with $187,277,900 in 1938, $224,056,700 in 1937, $162,588,000 in 1936, $160,305,000 in 1935, $125,811,500 in 1934, $97,289,800 in 1933, $132,872,400 in 1932 and $315,482,000 in 1931. This record shows that construction reached its maximum activity in 1929, when the contracts awarded were valued at $576,651,800, while the minimum was in 1933, the contracts let then amounting to not quite 17 per cent of the 1929 figure. The decline from 1938 in the MacLean's estimate of construction work contracted for in 1939 was ·05 per cent; last year's total was also lower than in 1937, but was otherwise the highest since 1931. As already stated, the value of the building represented by the permits taken out in 58 cities in 1939 was 0·9 per cent lower than in 1938, but with this exception was highest since 1931.

The building authorized by the 58 centres in 1939 constituted 32·2 per cent of the total value of construction contracts awarded throughout the Dominion, a proportion very similar to that of 32·5 per cent in 1938. The percentages in the last few years have been lower than in any other of the nineteen for which figures for the 58 cities are available. In 1921, when these centres reported their highest proportion of the total building work in the country, the percentage was 48·6, while the average ratio in the years, 1920-1939, was 39·2 per cent.

Included in the tabular statistics are the index numbers of wages in the building trades in the principal industrial cities (as published annually by the Department of Labour in supplements to the LABOUR GAZETTE). These index numbers (on the basis of wage scales in

1913 as 100) for the period 1929-1939 are as follows: 1929—197·5; 1930—203·2; 1931—195·7; 1932—178·2; 1933—158·0; 1934—154·8; 1935—159·8; 1936—160·8; 1937—165·3; 1938—169·4; 1939—170·7.

The tabular summary also includes the average index numbers of wholesale prices of building materials (average 1926=100). These figures (also published regularly in the LABOUR GAZETTE) for the same period are as follows: 1929—99·0; 1930—90·8; 1931—81·9; 1932—77·2; 1933—78·3; 1934—82·5; 1935—81·2; 1936—85·3; 1937—94·4; 1938—89·1; 1939—89·7.

During 1939, the value of the authorized building was higher than in 1938 in Prince Edward Island, New Brunswick, Quebec, Ontario, Manitoba and Saskatchewan, while in Nova Scotia, Alberta and British Columbia, the co-operating cities showed declines. The largest actual gain, amounting to $1,118,596, was in Ontario, while the greatest proportionate increase was that of 69·2 per cent in New Brunswick.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA, JANUARY, 1940

THE accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on February 1 was 11,857, the employees on their pay-rolls numbering 1,117,761 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for January was 2,024, having an aggregate membership of 256,550 persons, 11·3 per cent of whom were without employment on February 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from 70 centres in which the Employment Service of Canada is situated, showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of February, 1940, as Reported by Employers

In accordance with the movement indicated at midwinter in 1938 and 1939, there was a decline in employment at the beginning of February, 1940, when industrial activity was however, at a higher level than in any other February for which data are available. The Dominion Bureau of Statistics tabulated returns from 11,857 employers, whose staffs included 1,117,761 men and women, compared with 1,135,619 at January 1. This reduction of 17,858 persons, or 1·6 per cent, lowered the crude index (1926=100), from 116·2 in the preceding month to 114·4 at February 1, 1940, as compared with 106·5 at that date in 1939; at the previous February maximum, in 1930, the index had been 111·6.

In the nine years, 1929-1937, upon whose experience the factors of seasonal adjustment are computed, employment showed practically no change from January to February. The decline in the crude index for February 1, 1940, was therefore accompanied by a reduction in the seasonally-corrected figure, which fell from 120·7 at January 1 to 118·8 at the beginning of February; this was the highest adjusted index for that date in the twenty winters for which statistics are now available.

An analysis of the returns by industry shows that at February 1, 1940, there was seasonal improvement in manufacturing, in which the co-operating establishments reported an increase of 11,676 workers, or 1·9 per cent, as compared with January 1. This gain rather exceeded the increase noted at February 1 in 1939 or 1938, but was smaller than the average advance indicated at the beginning of February in the years since 1920. In this respect, the latest increase was like the year-end losses from which it mainly represents recovery, and the number of workers reinstated constituted

nearly 57 per cent of the number laid off at January 1; this proportion compared favourably with that of just under 49 per cent recorded, on the average, at February 1 in the preceding nineteen years. The greatest gains at the date under review were in iron and steel, textile, leather, lumber and tobacco factories.

Among the non-manufacturing industries, mining, steam railway operation and construction and maintenance reported heightened activity, while the movement was unfavourable in other groups. There were large losses in trade and construction; those in the latter, which took place mainly in road work, exceeded the average contraction at mid-winter in the years since 1920. Logging, shipping and stevedoring, communications and services also reported considerable reductions in personnel.

For February 1, 1939, 11,261 establishments had furnished employment returns, showing an aggregate working force of 1,026,635; the index then was nearly eight points lower than that of 114·4 at February 1, 1940. On the basis of a comparison of the index numbers for February 1 in 1939 and 1940, it may be estimated that the co-operating firms employed over 77,000 more persons at the latter date than they had employed at February 1 of last winter.

Based upon the 1926 average as 100, the unadjusted index numbers of employment at the beginning of February in recent years are as follows:—1940, 114·4; 1939, 106·5; 1938, 110·4; 1937, 104·1; 1936, 98·4; 1935, 94·6; 1934, 91·4; 1933, 77·0; 1932, 89·7; 1931, 100·7; 1930, 111·6; 1929, 110·5; 1928, 102·0 and 1927, 96·6.

Employment in Financial Organizations

For some months, statistics of employment afforded have been collected from banks, trust companies and stock exchange firms. At the beginning of February, 412 firms and branches in these lines of business reported staffs aggregating 33,478 persons, compared with 33,484 in the preceding month. The addition of these figures to the returns furnished in the manufacturing, logging, mining, transportation, communications, construction, services and trade industries brings the total number of employees included in the February 1 survey of employment to 1,151,239 in 12,269 establishments, and slightly lowers the index of 114·4 in the industries above enumerated, to 114·3; when the employees of the co-operating financial organizations were added to the general figures for January 1, the index was lowered from 116·2 to 116·1. Comparable data for 1939 are not available.

Employment by Economic Areas

Contractions were generally recorded except in Prince Edward Island, New Brunswick and British Columbia, the losses in Quebec being most pronounced. Activity in all provinces was greater than at February 1 of last year, and in the Maritime Provinces, Quebec, Ontario and British Columbia, employment was also at a higher level than in any other February for which statistics are on record; in the Prairie area, the February 1 index was the highest for that date in the years since 1931.

Maritime Provinces.—The trend in the Maritime Provinces has usually been downward at the beginning of February in the nineteen preceding years for which data are available, the average loss in employment being nearly two per cent. At February 1 of the present year, activity showed a decline that was considerably below the average, 331 persons having been laid off since their last

Table I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS,

(Average Calendar Year 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Feb. 1, 1927	96·6	98·3	95·3	98·3	96·4	90·8
Feb. 1, 1928	102·0	97·0	101·6	104·9	103·2	93·5
Feb. 1, 1929	110·5	104·6	105·9	117·0	113·1	96·4

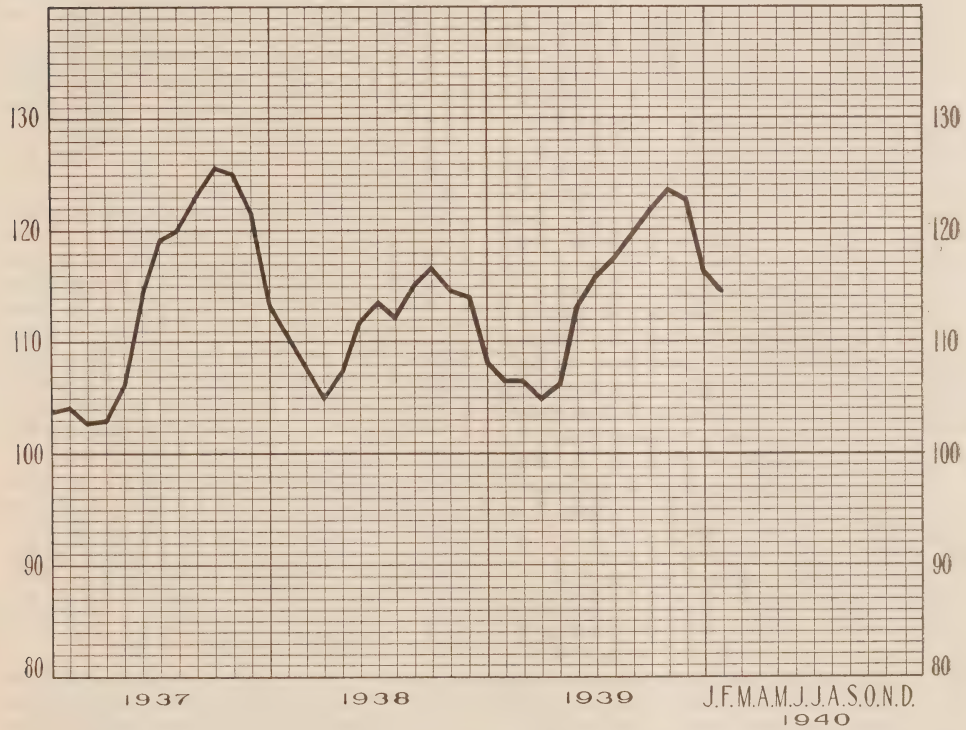
[1] For explanation of term "Relative Weight", see footnote to Table I.

report by the 824 reporting employers, whose payrolls aggregated 87,706 workers. The reduction took place in Nova Scotia, moderate gains being recorded in Prince Edward Island and New Brunswick. Transportation, construction and trade reported curtailment; logging and manufacturing, on the other hand, were brisker, the improvement in the latter taking place mainly in the iron and steel and lumber divisions.

A much greater loss had been indicated in the Maritime Provinces at February 1 of last year, when 802 firms had reported 73,764 employees, or 6,383 fewer than at January 1, 1939. The index was then many points lower than that of 118·4 at the date under review; this was the maximum for February 1 in the years since 1920.



Quebec.—Employment declined considerably in Quebec at the beginning of February,

when the working forces of the 2,939 co-operating establishments aggregated 331,926, as against 345,342 at January 1, 1940. This decrease of 3·9 per cent exceeded that recorded at February 1, 1939, but was smaller than the reduction at the same date in 1938. On the average, however, a small gain has been indicated at midwinter in the period since 1920, so that the losses in these three most recent years are contra-seasonal. In spite of slacker. Logging, transportation, construction and maintenance, services and trade also reported reduced activity, mainly seasonal in character. The losses in road work were particularly marked. Mining, on the other hand, afforded more employment.

For February 1, 1939, the 2,822 establishments making returns had recorded a staff of 320,551 men and women, or 5,234 fewer than in the preceding month.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

Note.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

the falling-off at the latest date, employment was at a higher level than in any other February for which data are available; the latest index was 116·0, compared with 113·0 at February 1, 1939, and 114·5 at the same date in 1938, the previous maximum.

There were large gains in manufacturing at the beginning of February, 1940, notably in textile and iron and steel plants, but leather, lumber, pulp and paper, tobacco and chemical factories also showed gains; on the other hand, food, beverage, clay, glass and stone and electric light and power works were

Ontario.—There was a moderate decrease, on the whole, in Ontario. Recovery was shown in manufacturing, particularly in iron and steel, textile, tobacco, leather, food and pulp and paper factories; mining and railway construction and maintenance also reported improvement, but transportation, building, road work, logging and retail trade were slacker, the losses being in most cases seasonal in character. Data were received from 5,189 firms employing 478,409 persons at the date under review, as compared with 481,339 at the beginning of January. This decline of

2,930 workers, or 0·6 per cent, was contra-seasonal, according to the experience of the years since 1920, in which the average change from January to February has been a gain. The movement had been upward at the beginning of February last year, when the 4,910 employers furnishing information had reported an aggregate payroll of 428,892; the index then, however, stood at 109·2, as compared with 120·2 at the latest date. The latter figure was the highest for February in the years since 1920.

Prairie Provinces.—Employment in this area has, with rare exceptions, declined at February 1 in the nineteen preceding years for which records are available. The tendency in Manitoba, Saskatchewan and Alberta was unfavourable at the date under review, and the 1,701 firms co-operating in the Prairie Provinces reduced their payrolls by 3,308 persons, to 131,632 at February 1. Manufacturing, on the whole, showed a small advance, there being improvement in iron and steel, textile and lumber plants; logging was also more active. On the other hand, communications, transportation, construction and trade released employees, the losses in the last-named being most marked. The general contraction in industrial activity at February 1, 1940, slightly exceeded the average indicated at that date in the years since 1920, but was smaller than that noted at midwinter in 1939, 1938 or 1937. The 1,613 employers furnishing statistics for the beginning of February last year had reduced their working forces to 120,850 from 125,059 at January 1, 1939. Standing at 100·8 at the date under review, the index was higher than at February 1 in any other year since 1931; the figure for February 1 of last winter was 93·9.

British Columbia.—There was a large increase in employment in British Columbia at February 1. Trade and construction reported reduced activity, but transportation, mining, logging and manufacturing were more active; the gains in the last-named took place mainly in food, lumber and pulp and paper factories. The working forces of the 1,204 reporting firms aggregated 88,088, an increase of 2,127 employees, or 2·5 per cent, as compared with their payrolls in the preceding month. The general advance in staffs considerably exceeded the small gain that has been the average change from January 1 to February 1 in the period since 1920, while the index, at 100·0, was higher than in any other February for which statistics are on record.

For February 1, 1939, 1,115 establishments had furnished information showing that they employed 82,578 men and women, compared with 84,162 at January 1; the index was then nearly four points lower than at the date under review. Index number of employment by economic areas are given in Table 1.

Employment by Cities

The trend was downward in seven of the eight cities for which statistics are segregated, Montreal, Quebec, Toronto, Ottawa, Windsor, Winnipeg and Vancouver showing losses in employment, while in Hamilton improvement was indicated. Industrial activity in each of these centres, except Quebec, was at a higher level than at the same date of last year. In Montreal, Toronto and Hamilton the indexes were higher than in any other February since that of 1930; in Ottawa and Winnipeg, the favourable comparison goes back to 1931, while in Vancouver, employment at February 1, 1940, was at its maximum for that date in the years since 1922. Firms in Windsor reported a better situation than at midwinter in other years since 1929, except 1938.

Montreal.—Manufacturing showed considerable recovery, on the whole, notably in the textile and iron and steel groups, while food factories were not so busy. Transportation, building and road construction and maintenance and trade also reported reduced employment, the losses being seasonal. Data were received from 1,729 employers with 164,259 workers, or 3,539 fewer than at January 1. Industrial activity in Montreal has usually advanced between January 1 and February 1 in the experience of the eighteen years in which statistics for the larger cities have been segregated. The index at the latest date stood at 105·7, or some three points higher than at the beginning of February in 1939, when improvement had been indicated; the 1,642 co-operating establishments had then employed 158,202 men and women.

Quebec.—Returns tabulated from 209 firms in Quebec City showed that they had reduced their personnel from 14,999 at January 1, to 14,893 at February 1, the index falling slightly from 107·8 at the former to 107·1 at the latter date. There was improvement in manufacturing and transportation, but construction, trade and services were seasonally quiet. The general index was lower than at the corresponding date of last year, although a rather larger decline had then been indicated in the 207 returns received; these showed an aggregate staff of 16,328.

Toronto.—Important seasonal losses took place in retail trade, and construction was quieter; on the other hand, there was improvement in manufacturing, mainly in food,

printing and publishing and textile works. On the whole, there was a decrease of 3,550 in the employees of the 1,768 co-operating firms, who had 146,499 workers. This reduction exceeded that indicated at the beginning of February, 1939, when the index of employment was over eight points lower than that of 113·9 at the date under review. The 1,673 employers from whom statistics were received at February 1 of a year ago, had a working force of 133,775.

Ottawa.—There was seasonal curtailment in retail trade in Ottawa, but the construction and maintenance group was somewhat brisker. Two hundred and twenty-seven establishments reported 14,775 workers, or 66 fewer than at January 1. The index of employment was several points higher than at the beginning of February, 1939, when a larger decline had been indicated by the 224 co-operating firms, who then had 13,964 employees.

Hamilton.—The situation in Hamilton showed improvement, chiefly in manufacturing and, more particularly, in iron and steel, while construction and trade were seasonally inactive. Statistics were tabulated from 332 employers with a staff of 38,024 men and women, compared with 37,252 in the preceding month. The index, at 116·6, was many points above that at February 1 of a year ago; a decrease had then been reported by the 313 establishments furnishing information, whose payrolls had included 31,191 persons.

Windsor.—Food and automobile factories in Windsor were slightly busier; trade and construction were quieter, while other industries showed little general change. The 194 reporting firms employed 20,549 workers, as against 20,693 at January 1. The level of employment was higher than at the same date in 1939, when a force of 19,315 had been indicated by the 191 employers furnishing information; the index then stood at 140·5, compared with 148·6 at the beginning of February in the present winter.

Winnipeg.—The number employed in Winnipeg declined, mainly in trade, although communications also released help. Manufacturing, however, was more active, textile, iron and steel and other factories reporting improvement. Returns were compiled from 532 concerns with a personnel of 41,831, compared with 42,691 in the preceding month. Employment was in greater volume than at February 1 of last year, when somewhat similar curtailment had been recorded by the 510 co-operating establishments, which had employed 38,506 persons.

97325—5

Vancouver.—Manufacturing reported a generally upward movement, the gain in lumber mills being largest; on the other hand, construction and trade released employees. The 523 firms in Vancouver furnishing statistics had a staff of 36,955, as against 37,168 at January 1. The index, at 110·3, was higher than at the same date in 1939, when 476 employers had 34,779 men and women on their payrolls.

Employment by Industries

Manufacturing.—Seasonal improvement was noted in factory employment at the beginning of February, when 6,466 co-operating manufacturers reported 618,409 operatives, compared with 606,733 at January 1. This was an increase of 11,676 persons, which raised the crude index from 118·2 in the preceding month, to 120·5 at February 1, as compared with 106·0 at the beginning of February a year ago. The latest index was higher than at the same date in any other year for which statistics are available; the previous maximum figure was that of 112·8 at February 1, 1929.

As already mentioned, the gain at February 1, 1940, reflects recovery from year-end losses that were below normal in the experience of the years, 1921-1939, and the number reinstated constituted 57 per cent of the number laid off in the preceding month, a percentage which was considerably larger than the average of 49 per cent indicated between January and February in past years. However, without reference to this important aspect, the general advance at the latest date was rather less than average; accordingly, the seasonally-adjusted index declined, falling from 126·1 at January 1, 1940, to 125·0 at February 1. These two figures, with that of 123·6 at December 1, 1939, are higher than in any other month for which data are on record.

The most pronounced improvement over January 1, 1940, took place in iron and steel plants, in which 4,847 additional employees were reported by the firms furnishing data; this gain raised the iron and steel index to its highest point since the early summer of 1930. The increase of 3,857 in textile factories resulted in the maximum index indicated in any month of the record. There were also substantial increases in the leather, lumber, pulp and paper, chemical, tobacco and other divisions. On the other hand, rubber, beverage, electrical apparatus, clay, glass and stone, electric light and power, non-ferrous metal and mineral product plants showed curtailment.

The February 1, 1940, crude index of employment in manufacturing, as already stated, stood at 120·5, compared with 118·2 in the preceding month, while at the beginning of February in recent years it has been as follows: 1939, 106·0; 1938, 110·3; 1937, 105·3; 1936, 98·5; 1935, 90·1; 1934, 84·2; 1933, 75·0; 1932, 85·9; 1931, 96·1; 1930, 110·2; 1929, 112·8; 1928, 102·3 and 1927, 98·2.

The 6,245 manufacturers furnishing data for February 1 of last year had reported 540,926 employees, as compared with 532,245 at the opening of 1939. The recovery then indicated had therefore been on a slightly smaller scale than that at the latest date, when the index was nearly 14 per cent higher than at the beginning of February, 1939.

Animal Products—Edible.—There was practically no change in employment in this group at the beginning of February, when the index, at 132·5, was some ten points higher than that of 122·2 at the same date in 1939. Statements were tabulated from 301 firms employing 25,740 workers, as compared with 25,711 at January 1, 1940. Dairies and meat packing plants reported losses, but the fish-preserving industries showed improvement.

Leather and Products.—Employment in boot and shoe factories very substantially increased, and there were smaller gains in tanneries and miscellaneous leather goods. A combined working force of 25,960 persons was reported by the 338 co-operating manufacturers, who had 24,944 employees at the beginning of January. Most of the advance took place in Quebec and Ontario. Activity was greater than at February 1 of a year ago, the latest index standing at 125·8, the highest figure for midwinter in the twenty years for which data are available.

Lumber and Products.—Seasonal improvement was indicated in sawmills, while container and furniture factories were also busier; 1,577 workers were taken on by the 946 firms making returns, who had 43,503 on their staffs. The increase greatly exceeded that noted at the beginning of February, 1939, when the index of employment was decidedly lower. There were gains in New Brunswick, Quebec and the Western Provinces at February 1 of the present winter, those in British Columbia being most pronounced.

Musical Instruments.—Thirty-six manufacturers of musical instruments (not including radios) reported slightly increased employment at February; their staffs numbered 1,557 persons, as compared with 1,537 at January 1. The index stood at 54·6, as against 47·4 at the same date of last year, when a downward movement had been indicated.

Plant Products Edible.—There was no general change in the vegetable food group, according to the 533 reporting establishments, which employed 35,397 workers, compared with 35,394 in the preceding month. Sugar and syrup factories showed losses, but there were additions to staffs in the flour and cereal and bread and bakery divisions. A small decline on the whole had been indicated at February 1 of last year, but the index then stood at 105·1, as compared with 116·0 at the date under review.

Pulp and Paper.—Pulp and paper mills, paper products and printing and publishing plants reported moderate gains, which resulted in an unusually high level of employment for midwinter in this industry. The general index stood at 111·4, compared with 103·7 at February 1, 1939. Data for the date under review were received from 711 employers of 69,170 workers, as against 68,390 at the beginning of January, 1940. Gains were reported in Quebec, Ontario, and British Columbia.

Rubber Products.—There was a falling-off in rubber factories; 52 of these reduced their payrolls from 13,718 persons at January 1 to 13,577 at February 1. The index, at 108·6, was 6½ points higher than at the same date in 1939, when little general change had been indicated.

Textile Products.—A large advance was reported in textiles at February 1, 1940, there being improvement in cotton, woollen, silk, headwear, hosiery and knitting, garment and personal furnishing establishments. The working forces of the 1,169 co-operating firms aggregated 118,759 persons at the beginning of February of this year, as compared with 114,902 in their last report. Ontario and Quebec showed marked improvement.

Beverages.—Employment in this division was curtailed; returns for the beginning of February were tabulated from 151 factories with 9,070 employees, or 413 fewer than in their last report. Activity was greater than at February 1 of a year ago, when the movement had also been downward.

Tobacco.—Forty-five tobacco manufacturing plants reported a combined working force of 13,534 men and women, an increase of 1,091 over their January 1 staffs. The index was rather higher than at the beginning of February in 1939, when a smaller gain had been indicated by the co-operating employers.

Chemicals and Allied Products.—Statements were compiled from 321 firms in this group, whose staffs aggregated 21,115, as compared with 20,829 at the beginning of January. Employment was considerably brisker than last

winter; improvement over the preceding month had also been noted at February 1 of last winter.

Clay, Glass and Stone Products.—A decrease was recorded in this group at the date under review, according to 220 manufacturers, whose labour forces included 9,554 workers, or 302 fewer than in the preceding month. Employment generally was in greater volume than at February 1, 1939, when the tendency had also been downward.

Electric Light and Power.—A falling-off was noted in central electric stations at the beginning of February; the 102 co-operating producers reported 16,779 employees, compared with 17,068 at January 1. Activity was greater than at February 1 of last year, a rather larger decline having then been indicated.

Electrical Appliances.—Employment in electrical appliance works showed a contraction from the preceding month; the index was many points higher than at midwinter in 1939, when the trend had also been downward. Data were received from 125 establishments employing 18,963 operatives, as against 19,075 at January 1, 1940.

Iron and Steel Products.—There were important increases in personnel in iron and steel factories, which resulted in the highest level of employment since the early summer of 1930. Most divisions shared in the advances, the most noteworthy being in the railway car and locomotive and other vehicle, crude, rolled and forged, machinery, agricultural implement, boiler, engine and tank, wire, pipe and heating appliance divisions. The greatest improvement was in Quebec and Ontario, although the trend was generally upward. Statistics were tabulated from 927 firms, whose staffs stood at 148,817, compared with 143,970 at January 1. The index, at 113·7, was some nineteen points higher than at the corresponding date of last year.

Non-ferrous Metal Products.—Aluminum, lead, tin, zinc and copper works recorded moderately heightened activity, but smelting and refining was rather slacker. There were increases in Ontario, but in British Columbia losses were indicated, the result being a moderate decline, on the whole, in the working forces of the 193 co-operating establishments; their staffs aggregated 26,014, compared with 26,207 in their last report. The index, at 165·2, was many points higher than at the same date in the winter of 1939, (151·3).

Mineral Products.—Ninety-eight establishments in the mineral products group reported 12,625 workers, compared with 13,021 in the preceding month. Employment in this division as a whole was brisker than at midwinter in 1939.

97325—5½

Logging

An important decline was recorded in logging; this was larger than that noted at February 1, 1939, but employment was then at a considerably lower level. Statements were received from 438 operators employing 66,882 workers, as against 69,981 at January 1. There were losses in Quebec and Ontario; while elsewhere the movement was favourable; the greatest gains were in British Columbia.

Mining

There was considerable improvement in mining at the beginning of February; the extraction of metallic ores showed a decided advance, and there were smaller gains in coal and other non-metallic mineral mining. On the whole, there was an increase of 1,703 persons in the forces of the operators furnishing returns, who numbered 415. Their staffs aggregated 78,374 employees, of whom 25,939 were engaged in the mining of coal, 44,157 in metallic ores and 8,278 in non-metallic minerals, other than coal. A small advance had been indicated in this division at February 1, 1939, when the index stood at 160·5, compared with 168·4 at the date under review; this was the highest midwinter figure yet indicated.

Communications

The personnel of the companies and branches reporting included 22,101 men and women, compared with 22,522 in the preceding month, most of the reduction taking place on telephones. The number employed was larger than at the same date in 1939, although similar curtailment had then been recorded.

Transportation

Street Railways, Cartage and Storage.—There was a downward trend in employment in these industries at February 1, the decline rather exceeding that which occurred at the same date in 1939; the index then, however, was several points lower. The 307 co-operating employers had 29,095 persons on their payrolls, or 484 fewer than at January 1, 1940. Most of the loss took place in Saskatchewan.

Steam Railway.—A moderate increase was indicated at the beginning of February in the operation departments of the steam railways, which reported 60,748 employees, compared with 60,495 in the month before. A gain had also been reported at February 1 of last year, but the index then stood at 71·6, or a few points lower than that of 76·2 at the date under review; this was the highest figure for February in the years since 1932.

Shipping and Stevedoring.—Employment in water transportation showed a further recession; 121 employers released 1,170 workers

from their payrolls, bringing them to 11,277 at February 1 of the present year. The index was lower than at the same date in 1939, when a smaller decrease had been recorded.

Construction and Maintenance

Building.—Employment in building construction declined at February 1; the index, at 48·4, was four points higher than at the beginning of February a year ago, the reduction then indicated having been on a larger scale. Statistics were received from 854 contractors, with 20,692 persons in their employ at the date under review, as against 23,808 at January 1, 1940. The tendency was unfavourable in all five economic areas.

Highway.—The number of workers reported by 362 employers in the highway construction and maintenance group was 27,614, or 11,430 fewer than in the preceding month. Employment in this division was in decidedly smaller volume than at February 1, 1939, when less extensive losses had been indicated.

Railway.—Additions to staffs were noted in railway construction and maintenance, mainly due to track-clearing operations. Greater gains had been recorded at the same date in 1939, and the index then was slightly higher. Statements were tabulated from 29 employers in this group, with 21,981 persons on their payrolls, as compared with 20,409 in the last report. Increases in personnel were registered in all five economic areas.

Services

The service group was quieter than in the preceding month; 592 establishments had 29,145 employees, or 428 fewer than at January 1, 1940. There were losses in laundries and dry-cleaning establishments and in hotels and restaurants. The index, at 131·8, was slightly higher than at February 1 of last year, when rather larger declines had been noted in this industrial division.

Trade

Following the heightened activity resulting from the Christmas and holiday season, there was a substantial reduction in the number employed in trade at February 1. The 2,086 merchandising establishments furnishing data reduced their payrolls from 144,357 employees at January 1, 1940, to 131,443 at the beginning of February. There were marked decreases in retail stores, while wholesale houses also showed a falling-off. The percentage curtailment was on a scale somewhat smaller than that reported at the beginning of February in 1939, but rather exceeded the average loss at midwinter in the last nineteen years. The index of employment at the latest date stood at 136·4, or a few points higher than that of 131·0 at February 1 of last year.

TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns at February 1, 1940.

(2) Unemployment in Trade Unions at the close of January, 1940

Unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons who are occupied at work in other than their own trades or who are idle on account of illness are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Activity for local trade union members at the end of January, 1940, was maintained in practically the same volume as in the preceding month, unemployment standing at 11·3 per cent as compared with a percentage of 11·4 in December, 1939. The January percentage was based on the returns tabulated from 2,024 labour organizations involving a membership of 256,550 persons, 29,023 of whom were without work on the last day of the month. The record indicates that the January situation was more favourable than in the corresponding month of any year since 1930. The employment advancement noted over January, 1939, was rather noteworthy, 15·9 per cent of idleness being registered for that month. The changes in the various provinces from December, 1939, were not of particular significance, British Columbia unions showing gains of slightly over one per cent while in Nova Scotia, New Brunswick, Quebec, Manitoba and Saskatchewan, conditions were but fractionally improved. In Alberta, however, losses in available work of nearly 3 per cent were recorded, coal miners and civic employees showing some slowing up in work afforded, and in Ontario activity was but nominally retarded. All provinces participated

in the better employment movement indicated from January, 1939, New Brunswick and British Columbia unions, particularly, showing considerably improved conditions while the gains in the remaining provinces were of moderate proportions.

Each month a separate tabulation is made of unemployment among trade union members in the largest city in each province with the exception of Prince Edward Island. Of these, Edmonton unions during January showed a drop in employment from the previous month of over 6 per cent, while declines on a smaller scale were evident among Saint John, Toronto, Winnipeg and Regina members. Activity for Halifax, Montreal and Vancouver unions, on the contrary, tended favourably though the changes from December, 1939, were quite small. In making a comparison with the returns for January, 1939, Saint John, Vancouver and Halifax unions showed noteworthy employment expansion during the month under review and advances of somewhat lesser degree were evident among Winnipeg, Montreal and Regina members. In Toronto the improvement recorded was slight. Edmonton unions alone reflected losses in work afforded which were not of particular importance.

From the chart which appears with this article and illustrates the trend of unemployment from January, 1934, to date, it will be noticed that the curve during January this year remained on almost the same level as in December, the nominal change indicated being in a favourable direction. The variation in the level of the curve during January from the corresponding month of 1939 was more pronounced and indicative of a greater prevalence of available work during the month under review.

The situation in the manufacturing industries during January was more favourable than in either the preceding month or January, 1939, the improvement in the former comparison being but fractional, while in the latter, the expansion indicated was of quite noteworthy proportions. At the close of January reports were received from 603 organizations in the manufacturing industries with a total of 100,290 members, 9,118 or a percentage of 9·1 of whom were unemployed in comparison with percentages of 10·0 in December and 14·0 in January, 1939. Leather workers were decidedly busier during January than in December and gains of much lesser degree were apparent among gas, and cigar and tobacco workers, general labourers and meat cutters and butchers. Activity also tended favourably for rubber, iron and steel, and hat, cap and glove workers, electric current employees, paper makers and printing tradesmen though the changes from December were quite small. On the other hand, fur workers suffered extensive losses in employment from December and noteworthy recessions were evident among jewellery glass and wood workers. Textile and carpet workers showed a moderate falling off in activity and the situation declined slightly for metal polishers, bakers and confectioners, garment and brewery workers. Contrasted with the returns for January, 1939, much greater activity prevailed during the period under survey among garment, wood and glass workers, meat cutters and butchers and metal polishers. Increases in employment on a smaller scale, though noteworthy were reflected by iron and steel, and brewery workers, and paper makers. A slightly better movement was indicated by cigar and tobacco, textile and carpet, and leather workers, and bakers

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

and confectioners. On the contrary, much quieter conditions prevailed for fur and rubber workers and declines in activity of considerably lesser degree were apparent among hat, cap and glove workers, electric current employees and general labourers. Among printing tradesmen and jewellery workers, minor contractions occurred.

There was a slight tendency toward retarded activity among coal miners in January, the 60 associations making returns with a membership aggregate of 22,119 persons showing that 784 or a percentage of 3·5 were idle as compared with 2·7 per cent of unemployment in December. The situation, however, reflected improvement from January, 1939, when 8·0 per cent of the members reported were out of work. Alberta and British Columbia miners indicated moderate curtailment in employment from December. In Nova Scotia there was a slightly higher level of activity apparent while New Brunswick miners were reported fully engaged in both months under comparison. Nova Scotia, Alberta and British Columbia unions contributed to the total advancement noted in coal mining as a whole from January, 1939, British Columbia unions showing the greatest expansion though in Alberta and Nova Scotia the gains were rather noteworthy. In New Brunswick there was no change, all members being reported at work.

Building and construction activities were further curtailed during January due largely to the usual winter quietness in these trades though the employment level was considerably above that of January, 1939. This was apparent from the returns tabulated for January from 230 local unions covering a membership of 27,465 persons, 9,777 of whom were unemployed at the close of the month, a percentage of 35·6 in comparison with percentages of 30·3 in December, 1939, and 43·8 in January, 1939. Extensive employment losses from December were recorded by bricklayers, masons and plasterers during the month reviewed and much slacker conditions prevailed for tile layers, lathers and roofers. Carpenters and joiners also showed a considerable falling off in activity and slight declines were apparent among steam shovelmen, plumbers and steam fitters. Marked improvement in conditions, however, was recorded by hod carriers and building labourers and small advances were indicated by bridge and structural iron workers, granite and stone cutters, electrical workers and painters, decorators and paperhangers. Compared with the returns for January, 1939, employment among bridge and structural iron workers, carpenters and joiners, painters, decorators and paperhangers, and plumbers and steam fitters registered important gains during the month under survey and tile

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

layers, lathers and roofers were considerably busier. Heightened employment on a small scale was apparent among electrical workers, hod carriers and building labourers, and granite and stone cutters. Bricklayers, masons and plasterers, and steam shovelmen, on the other hand, showed pronounced curtailment in activity.

The 859 local unions of transportation workers furnishing reports at the close of January, with a membership aggregate of 70,345 persons indicated that 6,480 or a percentage of 9·2 were unemployed in contrast with percentages of 10·0 in December and 12·9 in January, 1939. Steam railway employees, whose returns included over 80 per cent of the entire group membership reported, were wholly responsible for the better movement noted from December. Navigation workers, teamsters and chauffeurs showed moderately curtailed activity while the situation for street and electric railway employees was but nominally adverse. When contrasted with the returns for January, 1939, the steam railway division, as in the previous comparison, was the dominant factor in the improvement recorded during the month under review. Conditions for navigation workers also, were substantially better and a fractionally upward employment trend was evident among street and electric railway employees. Teamsters and chauffeurs, on the other hand, indicated heavy increases in unemployment.

Retail shop clerks at the end of January, 1940, registered only a 0·4 per cent of idleness compared with a fully engaged situation in December, 1939, and with an unemployment percentage of 0·2 in January, 1939. Reporting for January were 5 associations of these workers, including 1,703 members, 6 of whom were idle on the last day of the month.

There was a slight lessening in the volume of work afforded civic employees during January from the preceding month, the 83 local unions making returns with a total of 10,024 members showing that 521 or 5·2 per cent were idle at the close of the month in comparison with a percentage of 4·2 in December. The situation was less favourable than in January, 1939, when 1·1 per cent of inactivity was reported.

The level of employment for workers in the miscellaneous group of trades during January showed scarcely any variation from the preceding month, the 142 labour organizations from which reports were tabulated with a membership numbering 10,777 persons indicating that 484 were without employment on the last day of the month, a percentage of 4·5 in contrast with 4·6 per cent in December. Stationary engineers and firemen, and theatre and stage employees reported slight gains in available work which were almost offset by the declines apparent among barbers, hotel and restaurant employees, and unclassified workers. Pronounced employment expansion was evident in the miscellaneous group of trades, as a whole, from January, 1939, when 11·1 per cent of inactivity was recorded. In this comparison, unclassified workers were decidedly busier during the period reviewed and conditions for hotel and restaurant employees, barbers and stationary engineers and firemen were moderately improved. Minor contractions, however, occurred among theatre and stage employees.

Fishermen were much better engaged during January, than in the preceding month according to the returns compiled from 6 local unions combining a membership of 2,596 persons. Of these, 260 were unemployed on the last day of the month, a percentage of 10·0 in contrast with 25·8 per cent of inactivity in December. A moderately improved situation was noted from January, 1939, where 14·7 per cent of the members reported were without work.

Among lumber workers and loggers, better conditions prevailed during January than in both the previous month and January, 1939, the improvement recorded in the latter comparison being quite extensive. This was apparent from the reports received from 6 labour organizations comprising a membership of 2,230 persons, 439 of whom were idle, a percentage of 19·7 as compared with percentages of 23·0 in December, 1939, and 60·3 in January, 1939.

Table I, shows by provinces, the percentage of members who were on an average unemployed each year from 1929 to 1939, inclusive, and also the percentages of unemployment for January of each year from 1929 to 1937, inclusive, and for each month from January, 1938, to date. Table II, summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for January, 1940

The volume of business transacted by offices of the Employment Service of Canada during the month of January, 1940, as indicated by the average daily placements effected, showed a nominal increase over that of the previous month, and a decrease of 24 per cent from that of January last year. Changes from December, 1939, were not outstanding, the highest gain being reported in services, followed by others of lesser magnitude in logging, construction and maintenance, farming and mining, and with slight declines recorded in

trade, transportation and manufacturing. In comparison with January, 1939, heavy losses were shown in construction and maintenance and farming and a minor decrease only, in transportation, but these reductions much more than counterbalanced the increased placements registered in services, manufacturing, trade, logging and mining, the majority of these being shown in the first named group.

The accompanying chart shows the trend of employment since January, 1938, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications declined sharply during the first half of January, followed by a slight upward trend during the latter half of the month; however, at the close of the period the levels attained were still about 7 points below those registered at the end of January a year ago. The ratio of vacancies to each 100 applications was 37·5 and 38·9 during the first and the second half of January, 1940, in comparison with the ratios of 40·0 and 45·4 during the same periods of 1939. The ratios of placements to each 100 applications during the periods under review were 34·8 and 37·3, as compared with 37·8 and 44·5 during the corresponding month of 1939.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during January, 1940, was 1,036 as compared with 1,016 during the preceding month and with 1,334 in January last year.

The average number of applications for employment received daily by the offices during the month under review was 2,711 as compared with 2,229 in December and with 3,126 during January, 1939.

The average number of placements made daily by the offices of the Service during January, 1940, was 977, of which 584 were in regular employment and 393 in work of one week's duration or less, as compared with a total daily average of 972 during the preceding month. Placements in January a year ago averaged 1,286 daily, consisting of 777 in regular and 509 in casual employment.

During the month of January, 1940, the offices of the Service referred 27,064 persons to vacancies and effected a total of 25,400 placements. Of these, the placements in regular employment were 15,181, of which 9,798 were of men and 5,383 of women, while placements in casual work totalled 10,219. The number of vacancies reported by employers was 15,839 for men and 11,096 for women, a total of 26,935, while applications for work numbered 70,466, of which 50,398 were from men and 20,068 from women. Reports for December, 1939, showed 25,395 positions available, 55,709 applications made and 24,300 placements effected, while in January, 1939, there were recorded 33,349 vacancies, 78,133 applications for work and 32,132 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1930, to date:—

Year	Placements		
	Regular	Casual	Totals
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882
1940 (1 month)	15,181	10,219	25,400

Nova Scotia

During January, Employment Offices in Nova Scotia received orders for nearly 52 per cent more workers than in the preceding month and over 102 per cent more than during the corresponding month of last year. There was an increase also in placements of over 50 per cent when compared with December and of nearly 103 per cent in comparison with January, 1939. The increase in placements over January of last year was largely due to a substantial gain in construction and maintenance and fairly large increases in services and manufacturing. Placements were also slightly higher in logging, trade and mining, but showed a small decline in farming and transportation. Placements by industrial divisions included manufacturing 116; logging, 69; construction and maintenance, 1,053, and services, 685, of which 527 were of household workers. There were 1,028 men and 169 women placed in regular employment.

New Brunswick

The demand for workers, as indicated by orders received at Employment Offices in New Brunswick during January, was nearly 12 per cent less than in the preceding month, but nearly 18 per cent above the corresponding month of last year. There was a decrease of nearly 11 per cent in placements when compared with December, but an increase of over 19 per cent in comparison with January, 1939. The gain in placements over January of last year was nearly all in services, although small increases were also reported in trade and logging. Minor changes only were reported in all other groups. Placements in construction

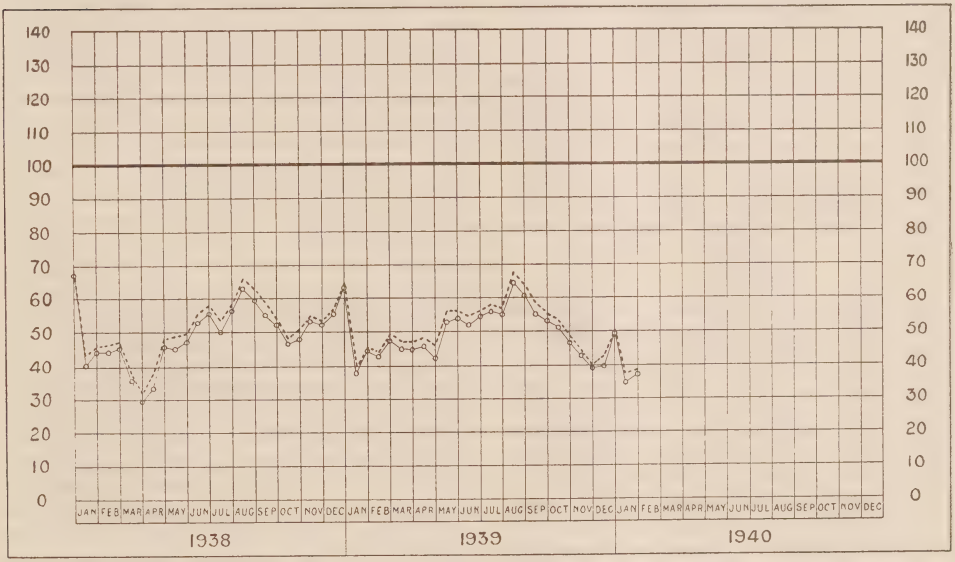
*Placements effected by offices now closed.

and maintenance numbered 393 and in services 647. Of the latter, 505 were of household workers. During the month 97 men and 103 women were placed in regular employment.

Quebec



There was an increase of nearly 12 per cent in the number of positions offered through Employment Offices in the Province of Quebec during January, when compared with the preceding month, but a decline of 3 per cent in comparison with the corresponding month of last year. Placements were nearly 7 per cent higher than in December, but nearly 8 per cent less than during January, 1939. Placements under construction and maintenance were considerably lower than during January of last year and accounted for the decrease under this comparison for the province as a whole. There was a small loss also in logging. These declines were largely offset by a substantial increase in services and a moderate gain in manufacturing. Changes in other groups were unimportant. Placements by industrial divisions included manufacturing, 197; logging, 769; construction and maintenance, 1,081 and services, 3,403, of which 3,190 were of household workers. Placements in regular employment numbered 2,014 of men and 2,079 of women.

Ontario

Orders received at Employment Offices in Ontario during January called for 6 per cent more workers than in the preceding month, but over 4 per cent fewer than during the corresponding month of last year. There was an increase of over 5 per cent in placements when compared with December, but a decline of 6 per cent in comparison with January, 1939. The substantial decrease in placements under construction and maintenance accounted for the adverse change from January last year for the province as a whole, although the loss in this group was largely offset by a fairly substantial increase in services and manufacturing and somewhat smaller gains in logging, trade and mining. Placements by industrial divisions included manufacturing, 869; logging, 595; farming, 466; construction and maintenance, 2,992; trade, 263 and services, 3,622, of which 2,489 were of household workers. During the month 2,703 men and 1,623 women were placed in regular employment.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications———— Vacancies - - - - - - - - - Placements—o—o—o—o—o—o

Manitoba

There was a decrease of over 4 per cent in the number of positions offered through Employment Offices in Manitoba during January when compared with the preceding month and of over 44 per cent when compared with the corresponding month of last year. Placements also showed a decline of 5 per cent from December and of 43 per cent from January, 1939. There was a large reduction in farm placements when compared with January of last year and further losses were also reported

in services and logging, but the decreases in these groups were partly offset by moderate gains in construction and maintenance, manufacturing and trade. Industrial divisions in which most of the placements were effected were manufacturing, 986; logging, 319; farming, 982; construction and maintenance, 356 and services, 653, of which 580 were of household workers. There were 1,650 men and 351 women placed in regular employment.

SASKATCHEWAN

During January, positions offered through Employment Offices in Saskatchewan were nearly 9 per cent less than in the preceding month and over 74 per cent below the corresponding month of last year. Approximately the same percentages of loss were reported in placements under both comparisons. Farm placements, which were very heavy during January of last year under the Farm Improvement and Employment Plan, showed a pronounced decrease during the month under review and accounted for the decline for the province as a whole under this comparison. There was a moderate increase under construction and maintenance, but the changes in all other groups were unimportant. Placements by industrial divisions included farming, 239; construction and maintenance, 107 and services, 572, of which 362 were of household workers. Regular placements numbered 330 of men and 325 of women.

ALBERTA

Opportunities for employment, as indicated by orders received at Employment Offices in Alberta during January were nearly 8 per cent fewer than in the preceding month and nearly 7 per cent below those of the corresponding month of last year. There was a decrease also in placements of over 5 per cent in comparison with December and of nearly 7 per cent when compared with January, 1939. The only changes of importance by industrial divisions from January of last year were a decrease in farming and an increase in logging, as small changes only were reported in all other groups. Placements by industrial divisions included, logging, 309; farming, 640; construction and maintenance, 267 and services, 459, of which 384 were of household workers. During the month 1,285 men and 343 women were placed in regular employment.

BRITISH COLUMBIA

Employment opportunities as indicated by orders received at Employment Offices in British Columbia during January, were nearly 6 per cent better than in the preceding month, but over 45 per cent less favourable than during the corresponding month of last year. There was an increase of over 4 per cent in placements, when compared with December, but a decline of nearly 46 per cent in comparison with January, 1939. Placements under construction and maintenance were considerably fewer than during January of last year and there was a small decrease in logging. These declines were partly offset by a fairly large increase in services and small gains in manufacturing and trade. Placements by industrial divisions included, manufacturing, 68; farming, 84; construction and maintenance, 968 and services, 1,252, of which 687 were of household workers. There were 691 men and 390 women placed in regular employment.

Movement of Labour

During the month of January, 1940, the offices of the Employment Service of Canada made 15,181 placements in regular employment, 6,884 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 458 were granted the Employment Service reduced transportation rate, 429 travelling to centres within the same province as the despatching office and 29 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Transfers at the reduced rate in Quebec during January were of bushmen, 4 in number, who proceeded to employment in the Pembroke zone on certificates secured at the Hull office. Business transacted by Ontario offices during January involved the issue of 289 reduced rate certificates, all provincial. Of these, 206 were granted at the Port Arthur office to 204 bushmen, one fisherman and one engineer, going to various points within the Port Arthur zone. The Port Arthur zone also received 8 bushmen transferred from Sudbury. For points within their respective zones the Fort William office despatched 20 bushmen and the Sudbury office 52 bushmen. Destined to the Fort William zone, in addition, was one sheet metal worker shipped from Hamilton, while to the Sudbury zone one blacksmith journeyed from North Bay. The Windsor office effected the transfer of one moulder to Sault Ste. Marie. The Winnipeg office was responsible for the despatch of all persons travelling at the reduced rate in Manitoba during January, who numbered 41. Of these, 16 went to provincial situations and 25 outside the province. The latter were destined to the Port Arthur zone and included 19 bushmen, one hotel general, one farm hand, one teamster, one

blacksmith, one miner and one truck driver. Within the province the movement was entirely to centres in the Winnipeg zone and comprised the transfer of 7 tractor operators, 4 bushmen, 2 farm hands, 2 cooks and one fisherman. In Saskatchewan during January one bushman was granted a certificate at the Saskatoon office for transportation to Prince Albert. Benefiting by the reduced rate in Alberta during January 113 workers were conveyed to provincial employment. All of these were bound for centres in the Edmonton zone and travelled on certificates granted at that zone office, among whom were 76 bushmen, 18 fish company employees, 7 miners, 3 saw mill workers, 3 tractor operators, 2 oil refinery workers, one farm hand, one hotel worker, one housemaid and one cook. Offices in British Columbia granted certificates to 10 workers during January, bound for provincial employment. The Vancouver office was instrumental in transferring one miner to Nelson and 7 mine workers and one hotel cook within the Vancouver zone, while to a point within its own zone the Prince Rupert office despatched one farm hand.

Of the 458 persons who travelled at the Employment Service reduced transportation rate during January 269 were carried by the Canadian National Railways and 189 by the Canadian Pacific Railway.

(4) Building Permits Issued in Canada during January, 1940

The statistics of building permits issued by the Dominion Bureau of Statistics have been enlarged to include 201 municipalities instead of 58 as formerly. The return now includes all municipalities which have systems of issuing permits. However, in the presentation of the tabular statistics in this review, figures are given for only these same 58 cities in which the greater proportion of building activity generally occurs.

TABLE 1.—VALUES AND CLASSIFICATIONS OF BUILDING PERMITS IN 201 MUNICIPALITIES IN CANADA, BY PROVINCES, JANUARY, 1940

Classification of Permits	Canada	Provinces			
		Prince Edward Island	Nova Scotia	New Brunswick	Quebec

New Construction	2,345	500	75	5,934	2,515
Repairs, Alterations, Additions, etc.	53,549	50	5	100	7,760

A new table (Table 1) is included which shows a classification of all permits issued according to the proposed use of the building to be erected, altered or repaired. This classification is made up by provinces, and covers residential, institutional, commercial, industrial and "all other" structures. It also separates new construction from additions, alterations, and repairs.

The table (11), showing values and average indexes for preceding years, has also been enlarged in the Bureau's presentation to include permits for the current and preceding months, as well as total values for the last twenty calendar years, but because of space limitations this review presents only this tabular summary in the more condensed form in which it has formerly appeared.

Average indexes of the value of building permits and of wholesale prices of building materials (1926 = 100) will be shown for the current month, together with the preceding twelve-month period.

The January, 1940, report of building permits issued includes permits from 113 muni-wi

TABLE II.—RECORD OF BUILDING PERMITS AND THEIR INDEXES, TOGETHER WITH AVERAGE INDEXES OF WHOLESALE PRICES OF BUILDING MATERIALS, 1926-1940, (1926=100)

Year	Total value covered by building permits January	Total value covered by building permits Twelve months	Average index of value of building permits Twelve months	Average index of wholesale prices of building materials Twelve months

† In order to conform with the limitations of space this table has been reduced to include statistics of only 58 municipalitie as formerly, instead of the 201 as published in the Dominion Bureau of Statistics report.
[1] 54 Municipalities only reporting.

cipalities and has a value of $3,303,212 with $2,313,868 representing new construction, while repairs, alterations and additions, account for $989,344.

Of the 201 municipalities in Canada which issue permits, 59 had nothing to report for January, while 29 failed to respond to enquiries.

Reports were received from 54 of the 58 municipalities which heretofore comprised this report. The value of permits issued by them amounted to $2,391,300, while the total for the 35 municipalities was $2,196,975. Corresponding values for December, 1939, were $6,035,212 and $5,399,870 respectively.

Provincially, the value of building permits issued in January, 1940, was as follows: Prince Edward Island, no permits issued; Nova Scotia, $123,250; New Brunswick, $13,165; Quebec, $1,081,765; Ontario, $1,427,406; Manitoba, $19,800; Saskatchewan, $88,672; Alberta, $86,639; British Columbia, $462,515.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF FEBRUARY, 1940

Reports of the Superintendents of the Employment Service

THE employment situation at the end of February, 1940, was reported by the Superintendents of the Employment Service of Canada to be as follows:—

Farmers in the Maritimes were engaged in filling orders for firewood, as well as preparing for spring activities. Weather was favourable for logging and lumbermen were busy cutting and hauling, but gales and snow curtailed the fishing industry. Coal mines in the New Glasgow area worked from four to six days per week and those in Cape Breton and vicinity from three to six days. Nearly all factories were operating on full time, although some idleness, mostly of a temporary nature, was reported by the iron and steel companies. Little new building construction was being started, but all contracts under way were progressing steadily. Maintenance work on highways and railroads also provided some employment for unskilled labour. Transportation, by rail, was fairly heavy, but lighter by boat; poor road conditions also had hampered motor traffic. Trade was only fair. In the Women's Division experienced help was scarce, although a fair number of placements had been made.

Activity was satisfactory in logging in the Province of Quebec, as, due to favourable weather, woods' operations had been well maintained. Manufacturing also showed a favourable trend, clothing and metal industries being particularly busy. Building construction recorded improvement, except at Thetford Mines, Val D'Or and Quebec City, where the closing down of public works had considerably increased the number of unemployed. Road work, however, was slacker, although snow cleaning kept many persons busy. Trade in the Eastern Townships was very good and business at Montreal picking up, but elsewhere, the season was quiet. Placements, both regular and casual, were made in services the majority of these being in the Women's Division.

Occasional calls only were reported for farm hands in Ontario, although some enquiries had been made for help at a later date. Logging was less active and many camps, following completion of the sleigh haul, were reducing their crews. No demand existed for workers in the mining industry. Manufacturing, in general, showed an upward trend, some branches of the industry, particularly in the iron, steel and textile groups, having increased their staffs considerably, as the result of war contracts. In all such cases these emergency orders receive preference and plants were operating at full capacity in order to complete the work as quickly as possible. Requests for expert mechanics were increasing and few skilled men were unemployed. Building construction was quiet, with a good supply of all classes of building tradesmen available. Some employment was offered on sewers and street cleaning and, at Sarnia, a heavy movement of freight and grain was reported through the terminal. Trade was fair. Calls for first-class cooks and cooks-general were more numerous than the supply available. A few women and girls also were placed in factories and in clerical positions.

Farming was very quiet in the Prairie Provinces, although a few enquiries had been made regarding help for spring work. Logging was more active, colder weather and more snow being mainly responsible for the improvement noted in this industry. Mining was slack, a great number of workers being idle. No activity was reported in manufacturing and construction showed slight change, a little more work being available in certain localities, some of which was on government contracts. Wholesale trade remained fairly steady, but retail trade was slow. There were a number of calls for female household help and placements of

juveniles from the Vocational Training Schools had been made at very good wages.

There were few requests for farm help in British Columbia and little labour turnover in logging. In the country about Nanaimo reforestation had provided employment for a party of men and all the larger camps in the Queen Charlotte Islands were operating. Sawmills in the Alberni District had also increased their working days per week and reports from Vancouver showed that during the first month of the year, figures issued in comparison with those of January, 1939, recorded an increase of 13,000,000 feet of lumber certified for export. Coal mines, for the most part, were working steadily and activity in herring fishing at Prince Rupert was greater than for many years past. There were few calls for skilled tradesmen in the construction group and at Victoria increased registration of applicants continued, as a result of temporary layoffs. Shipping and longshoring were fair at all ports. Trade was rather quiet. An increased demand for casual domestic help was noted in the Women's Division, with placements also reported in regular work.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

(Owing to the non-receipt of the British Ministry of Labour Gazette for January in time for use with the February issue of the LABOUR GAZETTE, *employment statistics covering two months are included in the following article to preserve the continuity of the record.)*

November-December Record

The British *Ministry of Labour Gazette,* January, 1940, summarized the employment situation as follows:—

Employment showed an improvement between November 13, and December 11, 1939. For Great Britain and Northern Ireland, a total of 1,440,923 were registered as wholly unemployed (1,294,605) or temporarily stopped (146,318), a decrease of 36,663 compared with the figures for November 13, 1939, and a decrease of 477,660 when compared with the figures for December 12, 1938.

There were reductions between November 13 and December 11, in the numbers unemployed in the distributive trades, hotel and boarding house service, dock, harbour, etc., service, the cotton industry, printing and bookbinding, the entertainment, sport, etc., industries, motor vehicle, cycle and aircraft manufacture, engineering, ship building and repairing, and the road transport and shipping services. On the other hand, unemployment increased for seasonal reasons in agriculture, horticulture, etc., and the building industry; there was also some increase, due to temporary causes, in the numbers suspended from work in the coal mining industry.

The decrease in the numbers unemployed occurred mainly in the London, North-Western and Scotland Divisions: there were also decreases in the Southern, Midlands, and North-Eastern Divisions. Unemployment increased in the North-Midlands, Eastern, Northern and Wales Divisions and in Northern Ireland. In the South-Eastern and South-Western Divisions there was little change.

Among insured persons, aged 16-64, the percentage unemployed in Great Britain and Northern Ireland at December 11, 1939, was 9·1, as compared with 9·2 at November 13, 1939, and 12·7 at December 12, 1938. For persons within the general scheme the corresponding percentages were 9·1 at December 11, 1939, 9·5 at November 13, 1939, and 12·9 at December 12, 1938. For persons within the agricultural scheme the percentages were 7·4, 5·1 and 8·9 respectively.

December-January Record

The British *Ministry of Labour Gazette,* February 1940, summarized the December-January employment situation as follows:—

Employment in January was seriously affected by the severe weather conditions, which in many cases made outdoor work impossible; at January 15, the date on which the monthly count of unemployed persons on the registers of Employment Exchanges was taken, large numbers of workpeople were temporarily idle on this account. The industries chiefly affected were building and public works contracting, but the effects were also felt in many other industries, including agriculture, brick and tile manufacture, stone and slate quarrying, and some of the outdoor services of local authorities.

The numbers unemployed in January normally show a large increase over those for December owing to the cessation of Christmas activities. In the present year this tendency was less marked than usual, though there were seasonal increases in unemployment in the distributive trades, the furnishing trades, the pottery industry, certain food preparing trades and printing and bookbinding. In some industries, notably coal mining, there were de-

creases in unemployment. There was a temporary increase in the number of juveniles on the register, as is usual immediately after the end of a school term, owing to the registration of "school-leavers" applying for employment.

The net effect of these influences was an increase of 157,371, between December 11 and January 15, in the total number on the registers of Employment Exchanges in Great Britain; of this total, over 130,000 was accounted for by building, public works contracting, and agriculture, which are the major industries most likely to be adversely affected by frost or snow. As compared with January 16, 1939, the total number registered as unemployed showed a reduction of 520,130.

The numbers unemployed increased in every Division, but the increase was relatively small in the Northern Division and in Scotland, Wales and Northern Ireland; it was proportionately greatest in the Eastern, Southern, North-Eastern and North-Midlands Divisions.

Among insured persons, aged 16-64, the percentage unemployed in Great Britain and Northern Ireland, at January 15, 1940, was 10·2, as compared with 9·1 at December 11, 1939, and 14·0 at January 16, 1939. For persons under the general scheme the corresponding percentages were 10·2 at January 15, 1940, 9·1 at December 11, 1939, and 14·2 at January 16, 1939. For persons within the agricultural scheme the percentages were 9·7, 7·4 and 11·2 respectively.

United States

In a report issued on February 28 by Miss Frances Perkins, United States Secretary of Labor, a decline of approximately 1,160,000 workers in non-agricultural employment in January was attributed largely to seasonal factors. It was stated in the report that this decline was about 100,000 greater than that which took place at the same time in 1939. However, it was pointed out that, as a result of large increases in employment during 1939 approximately 1,100,000 more workers were engaged in non-agricultural occupations in January, 1940, than in January of last year.

The following paragraphs taken from the official press release indicate the employment situation in the United States to be as follows:—

Substantial seasonal declines were reported from December to January in retail trade, manufacturing, construction and transportation. Following the greater-than-seasonal expansion in December to handle holiday trade, approximately 600,000 people, or over 15 per cent of employees in retail establishments, were laid off by mid-January. This decline is about the same as the decreases from December to January in the past 2 years.

Total factory employment declined by 2·4 per cent from the mid-December level, affecting 200,000 workers. This decrease, which marks the first recession since May of last year, was slightly larger than the expected seasonal decrease of 1·8 per cent.

Employment in factories making durable goods, which had increased their activity most rapidly during the previous months, declined somewhat more than employment in the non-durable goods industries, in which the textile, food, paper, and tobacco groups showed appreciable employment declines. The current level of employment in the durable-goods industries is 18 per cent higher and pay-rolls 29 per cent higher than last January; for the non-durable-goods industries the employment level is 4 per cent higher and pay-rolls 7 per cent higher.

The unusually severe weather in January contributed to the greater-than-seasonal decline in construction employment, approximately 200,000 fewer workers being employed than in the preceding month. Class I steam railroads reported a seasonal decrease of 20,000 workers. In other industries, employment changes were not marked and conformed generally to seasonal trends. In anthracite mining, in which a small employment gain was reported, pay-rolls nearly doubled from the very low level prevailing in mid-December.

Employment on Private Construction.—Employment in private building construction dropped 16·7 per cent from December to January, according to reports from 11,785 contractors, employing 94,995 workers. Pay-rolls were down 19·9 per cent. Unusually severe weather conditions in most sections of the country resulted in a greater January decline than any reported since 1932, the average January decrease for this 8-year period being 12 per cent. Reduced employment was reported from all states.

Employment on Public Works.—Employment on work relief projects of the Work Projects Administration rose again in January with an increase of 137,000 over December. The 2,213,000 workers employed on these projects, however, were 682,000 less than the number employed in January, 1939. Because of inclement weather and a consequent stoppage of work on many projects, pay-rolls of $107,220,000 in January, in spite of increased employment, were $636,000 less than in December.

The number of youths employed on work projects of the National Youth Administration increased 27,000 in January and 21,000 more students were given employment on the Student Aid Program.

Seasonal influences, particularly on Federal-aid roads and dredging projects, were responsible for decreased employment on construction projects financed from regular Federal appropriations. Employment during the month ending January 15 was 222,000, a decrease of 33,000 from December, but 40,000 more than in January a year ago.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada, which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages Scales of the respective provinces.

Respecting contracts for building and construction work the "A" conditions of the Fair Wages Order in Council of 1922, as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. The clause relating to wages and hours in the last named statute is in the terms following:—

> "All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;
>
> The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency as may be approved by the Minister."

This Act, like the 1930 measure, applies not only to contracts made with the Government of Canada, for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee. Thus, with respect to works for the elimination of grade crossings, towards which assistance is granted from Dominion public funds under Orders of the Board of Transport Commissioners, and certain other works being carried out under agreement with the provinces which are also assisted by grant of federal funds, the same labour conditions are enforced which apply to works of building and construction undertaken for the various departments of the Dominion Government.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain, beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon

included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contract or is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada:

GROUP "A" CONTRACTS

(1) *Works of Construction, Remodelling, Repair or Demolition*

NOTE: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provided that "Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work, and also specify that the rates of wages set out therein are *minimum* rates only and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

DEPARTMENT OF PUBLIC WORKS

Construction of a public building at Tatamagouche, N.S. Name of contractor, Mr. Maurice A. Condon, Kentville, N.S. Date of contract, January 30, 1940. Amount of contract, $18,480 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 75
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 40
Carpenters and joiners	0 55
Cement finishers	0 50
Cement and concrete mixer operators:	
Steam	0.60
Gasoline or electric	0 45
Drivers	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 60
Electricians (inside wiremen)	0 60

	Per hour
Hoist operators, tower (gasoline or electric)	0 45
Labourers	0 35
Lathers (metal)	0 55
Motor truck drivers	0 40
Motor truck driver and truck	1 35
Ornamental iron workers	0 55
Painters and glaziers	0 55
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 40
Plumbers and steamfitters	0 60
Roofers, felt and gravel: patent	0 40
Roofers, sheet metal	0 60
Sheet metal workers	0 60
Stonecutters	0 65
Stonemasons	0 75
Stonemasons' helpers (mixing and tempering mortar)	0 40
Structural steel workers	0 75
Tile setters	0 75
Tile setters' helpers (all men assigned to help tradesmen)	0 40
Watchman	0 30
Waxers and polishers	0 40

Construction of a forest insect laboratory at Winnipeg, Man. Name of contractors, Malcom Construction Co., Ltd., Winnipeg, Man. Date of contract, January 10, 1940. Amount of contract, $13,300 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Asbestos insulation workers	$0 75
Brick and hollow tile layers	1 10
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 50
Carpenters and joiners	0 85
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 80
Gasoline or electric	0 55
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 80
Electricians (inside wiremen)	0 85
Engineers, operating, steam:	
Single or double drums	0 90
Three or more drums	0 95
Firemen, stationary	0 55
Labourers	0 40
Lathers:	
Metal	0 75
Wood	0 70
Linoleum layers	0 60
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Ornamental iron workers	0 75
Painters and glaziers	0 70
Plasterers	1 10
Plasterers' helpers (mixing and tempering material)	0 50
Plumbers and steamfitters	0 95
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 50
Roofers, felt and gravel: patent	0 45
Sheet metal workers	0 70
Stonemasons	1 10
Stonemasons' helpers (mixing and tempering mortar)	0 50
Structural steel workers	0 85
Stonecutters	0 90
Watchman	0 35
Waxers and polishers (floor)	0 45
Welders and burners on steel erection	0 85

Construction of an addition to the gymnasium at the Royal Canadian Mounted Police Barracks, Regina, Sask. Name of contractors, Poole Construction Co., Ltd., Regina, Sask. Date of contract, February 13, 1940. Amount of contract, $72,100. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$1 10
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 75
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 70
Gasoline or electric	0 50
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Electricians (inside wiremen)	0 90
Labourers	0 40
Lathers (metal)	0 75
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Ornamental iron workers	0 65
Painters and glaziers	0 70
Plasterers	1 00
Plasterers' helpers (mixing and tempering material)	0 47½
Plumbers and steamfitters	0 90
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 45
Roofers, felt and gravel: patent	0 45
Roofers, sheet metal	0 75
Roofers, shingles (wood, asbestos)	0 75
Rodmen, reinforced steel	0 50
Sheet metal workers	0 75
Stonecutters	0 85
Stonemasons	1 10
Stonemasons' helpers (mixing and tempering mortar)	0 45
Structural steel workers	0 85
Terrazzo layers	0 75
Terrazzo finishers and helpers	0 60
Tile setters (ceramic)	1 10
Tile setters' helpers (all men assigned to help tradesmen)	0 45
Tile setters (asphalt, mastic)	0 85
Watchman	0 35
Welders and burners on steel erection	0 85
Engineers, crane (steam, gasoline, electric)	0 75
Engineers, operating, steam:	
Single or double drum	0 70
Three or more drums	0 75
Engineers on steel erection	0 85
Fireman, stationary	0 50
Steam shovel engineers	1 00
Steam shovel:	
Cranemen	0 75
Firemen	0 60
Oilers	0 50
Shovel operators (gasoline)	1 00
Painters (spray)	0 80

Construction of water service and sewerage systems in the annex laboratories of the National Research Council, Ottawa, Ont. Name of contractors, Thomas Fuller Construction Co., Ltd., Ottawa, Ont. Date of contract, January 24, 1940. Amount of contract, $61,998. A fair wages schedule was included in the contract as follows:—

	Per hour
Cable splicers	$0 80
Carpenters and joiners	0 85
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 70
Gasoline or electric	0 55
Compressor operators	0 55
Drill operators	0 55
Drivers	0 45
Driver, horse and cart	0 60
Driver, team and wagon	0 80
Electricians (inside and outside wiremen)	0 80
Labourers	0 45
Motor truck drivers	0 50
Motor truck driver and truck	1 45
Ornamental iron workers	0 60
Painters (spray)	0 85
Painters and glaziers	0 70
Plumbers and steamfitters	0 95
Powdermen	0 55
Pipe layers and caulkers	0 55
Sheet metal workers	0 85
Structural steel workers	0 80
Shovel operators (gasoline)	1 00
Steam shovel cranemen	0 70
Steam shovel firemen	0 55
Watchmen	0 40
Steam shovel engineers	1 00

Construction of breakwater repairs at Caissie's Cape, N.B. Name of contractor, Mr. Charles L. Comeau, Caraquet, N.B. Date of contract, February 3, 1940. Amount of contract, approximately $36,790. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmith	$0 55
Blacksmith's helper	0 40
Boatman (rowboat)	0 35
Carpenters	0 55
Driver	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 60
	Per day
*Diver	14 00
*Diver's tender	5 00
	Per hour
Labourers	0 35
Motor boat operator	0 40
Motor truck driver	0 40
Motor truck driver and truck	1 35
Pile driver and derrick foreman	0 70
Pile driver and derrick engineer	0 60
Pile driver and derrick men (rigging, setting and signalling)	0 50
Pile driver and derrick fireman	0 40
Pile driver and derrick labourers	0 40
Timbermen and cribmen (measuring, scribing and by use of axe, adze, etc., cutting and fitting timber)	0 42
Watchman	0 30

* Full day's pay to be allowed whether employed full or part time.

Construction of a sea wall at Pilgrim Cove, R.C.N. Barracks, Esquimalt, B.C. Name of contractors, Northern Construction Co. and J. W. Stewart, Ltd., Vancouver, B.C. Date of contract, January 30, 1940. Amount of contract, approximately $20,274. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 75
Blacksmiths' helpers	0 50
Carpenters and joiners	0 80
Cement finishers	0 60
Compressor operators (gasoline or electric)	0 55
Concrete mixer operators:	
Steam	0 70
Gasoline or electric	0 55
Drill runners	0 55
Labourers	0 45
Motor truck drivers	0 50
Motor truck driver, with trucks	1 50
Pile driver foreman	1 25
Pile driver engineer	1 12½
Pile driver men	1 00
Pile driver firemen	0 68¾
Pile driver boomman	1 00
Pile driver bridgeman	1 00
Powdermen	0 55
Dredge Crew (Dipper Dredge):—	
Engineer or runner	1 25
Craneman	0 90
Fireman	0 68¾
Mate or winchman	0 62½
Scowman	0 50

Construction of an animal house at Lethbridge, Alta. Name of contractors, Bennett & White Construction Co., Ltd., Calgary, Alta. Date of contract, January 22, 1940. Amount of contract, approximately $5,103. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 42½
Carpenters and joiners	0 70
Cement finishers	0 55
Cement and concrete mixer operators:	
Steam	0 70
Gasoline or electric	0 50
Drivers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 70
Electricians (inside wiremen)	0 75
Labourers	0 40
Lathers (metal)	0 75
Motor truck drivers	0 45
Motor truck driver and truck	1 45
Ornamental iron workers	0 70
Painters and glaziers	0 75
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 45
Plumbers and steamfitters	0 85
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 45
Roofers, felt and gravel: patent	0 45
Sheet metal workers	0 70
Watchman	0 35

Construction of a Customs and Immigration Building at Armstrong, P.Q. Name of contractors, Walters Construction and Engineering Co., Quebec, P.Q. Date of contract, January 23, 1940. Amount of contract, $16,-

944 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 75
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 40
Carpenters and joiners	0 55
Cement finishers	0 50
Cement and concrete mixer operators:	
Steam	0 60
Gasoline or electric	0 45
Drivers	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 60
Electricians (inside wiremen)	0 60
Engineers, operating, steam:	
Single or double drums	0 60
Three or more drums	0 70
Engineers on steel erection	0 75
Firemen, stationary	0 40
Labourers	0 35
Lathers (metal)	0 55
Motor truck drivers	0 40
Motor truck driver and truck	1 35
Ornamental iron workers	0 55
Painters and glaziers	0 55
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 40
Plumbers and steamfitters	0 60
Rodmen, reinforcing steel	0 45
Roofers, felt and gravel: patent	0 40
Roofers, sheet metal	0 60
Roofers, shingles (wood, asbestos)	0 55
Sheet metal workers	0 60
Stonecutters	0 65
Stonemasons	0 75
Stonemasons' helpers (mixing and tempering mortar)	0 40
Structural steel workers	0 75
Watchman	0 30
Welders and burners on steel erection	0 75

Construction of a float and approach at Mill Bay, Saanich Inlet, B.C. Name of contractors, Victoria Pile Driving Co., Ltd., Victoria, B.C. Date of contract, February 16, 1940. Amount of contract, approximately $3,320. A fair wages schedule was included in the contract as follows:—

	Per hour
Pile driver foreman	$1 25
Pile driver engineer	1 12½
Pile driver man	1 00
Boomman	1 00
Bridgeman	1 00
Fireman	0 68¾
Labourer	0 45

Construction of repairs to the Government wharf at Victoria, B.C. Name of contractors, Victoria Pile Driving Co., Victoria, B.C. Date of contract, February 16, 1940. Amount of contract, approximately $3,986.50. A fair wages schedule was included in the contract as follows:—

	Per hour
Pile driver foreman	$1 25
Pile driver engineer	1 12½
Pile driver man	1 00
Boomman	1 00
Bridgeman	1 00
Fireman	0 68¾
Labourer	0 45

Installation of a heating system in the Drill Hall, R. C. N. Barracks, Esquimalt, B.C. Name of contractor, A. Lockley, Esquimalt, B.C. Date of contract, January 5, 1940. Amount of contract, $3,015. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$1 00
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 50
Carpenters and joiners	0 80
Cement finishers	0 60
Cement and concrete mixer operators: (Gasoline or electric)	0 55
Drivers	0 45
Drivers, horse and cart	0 60
Drivers, team and wagon	0 85
Electricians (inside wiremen)	0 75
Labourers	0 45
Motor truck drivers	0 50
Motor truck drivers and truck	1 50
Painters and glaziers	0 65
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 50
Plumbers and steamfitters	0 90
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 50
Roofers, composition	0 55
Sheet metal workers	0 75

Completion of radio station at St. Charles, Man. Name of contractor, Mr. Randner Sigurdson, Winnipeg, Man. Date of contract, February 8, 1940. Amount of contract, $5,430. A fair wages schedule was included in the contract as follows:—

	Per hour
Carpenters and joiners	$0 85
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 80
Gasoline or electric	0 55
Driver, horse and cart	0 55

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Manufacturing: Textiles and Clothing

WINNIPEG, MANITOBA.—A CERTAIN MANUFACTURER OF DRESSES AND BLOUSES AND THE INTERNATIONAL LADIES' GARMENT WORKERS' UNION, LOCAL 237.

Agreement to be in effect from January 1, 1940 to December 31, 1941, and for another year if no notice given.

Only union members to be employed.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime: no overtime permitted until all unemployed members of the union have been absorbed, and then must never exceed 10 hours a week, to be divided equally into the first four days of the week, and be paid at time and one quarter.

Wages: prices on piece work to be settled by a representative of the union with a shop committee and the employer, prices to be not less than $12 per week for the average experienced piece worker; time work to be settled between the union and the employer for every individual worker.

When there is not sufficient work for all employees in the factory, the available work is to be divided as equally as possible.

No new apprentices to be engaged until all union members are employed.

A shop chairman to be elected to adjust disputes with the manufacturer.

Any dispute which cannot be settled between the parties will be referred to a chairman to be agreed upon, whose decision will be final and binding.

Manufacturing: Printing and Publishing

MONTREAL, P.Q.—PUBLISHERS OF THREE FRENCH DAILY NEWSPAPERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL 145 (JACQUES CARTIER).

Agreement to be in effect from January 1, 1940, to December 31, 1941.

Only union members to be employed.

Hours: 38⅓ hours per week for day work and 37½ hours per week for night work on two newspapers, 40 hours in the third newspaper establishment.

Overtime: time and one half for first three hours; thereafter and all work on Sundays and eight specified holidays, double time.

Wages: on the two newspapers working 38⅓ hours for day work and 37½ hours for night work, $44 per week for day work and $50 for night work during the year 1940, and $45 per week for day work and $51 per week for night work in 1941; on the newspaper working 40 hours per week, $43 per week in 1940 and $44 per week in 1941. Substitutes to be paid 15 per cent over the regular rates and may work either day or night provided they do not exceed 40 hours in a week. Any job printers working on the newspaper will be paid the newspaper rate.

One apprentice allowed to first four journeymen or fraction thereof and one additional apprentice for each additional five journeymen.

Apprentices to be paid from 41·86 cents per hour during first half of third year to $1·0105 during second half of sixth year, with extra pay provided for work on morning newspaper.

TORONTO, ONTARIO.—DAILY NEWSPAPER PUBLISHERS AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS' UNION, LOCAL 21.

Agreement to be in effect from July 1, 1938, to June 30, 1941, and until a new agreement made, providing provisions of new contract are made retroactive to June 30, 1941. Any difference over negotiating a new contract which connot be settled by conciliation will be referred to arbitration as noted below in the last paragraph of this summary.

Only union members to be employed.

Hours: 8 per day (to be completed in 9 consecutive hours) 5 days per week, a 40 hour week, for day work; 7½ hours per night for night work (to be completed in 8 consecutive hours), 5 nights per week. If no substitutes available, work on sixth day or night to be at straight time.

Overtime: time and one half. After completion of a day's or night's work, if called back to work in the same office on the following night or day respectively at least a half day or night's pay to be given at time and one half, but in no case to get more than a full day's pay if required to work a full day or night. In case of emergency, if called back within a half hour, a guarantee of one hour's overtime. Double time for work on Sundays and holidays, except when part of regular shift on morning newspapers.

Wages: for July 1, 1938, to June 30, 1939, $44 per week for day work and $45.50 for night work; from July 1, 1939 to June 30, 1940, $45.50 for day work and $47 for night work; from July 1, 1940 to June 30, 1941, $47 for day work and $48.50 for night work. Foremen to be paid more than journeymen.

One apprentice allowed to first four journeymen and one to next eight journeymen, with not more than two in any office. This does not affect apprentices employed at time agreement was made.

Apprentices to be paid: for five day week, from $12 during first year to $32 during sixth year; for six day week, from $14.50 during first year to $31 during sixth year.

Any dispute over the terms of this agreement or over the negotiation of a new agreement, if it cannot be settled by conciliation, will be referred to arbitration under the provisions of the most recent International Arbitration Agreement between the American Newspaper Publishers Association and the International Stereotypers and Electrotypers' Union.

Toronto, Ontario.—Certain Job Printing Offices and the International Stereotypers and Electrotypers' Union, Local 21.

Agreement to be in effect from November 15, 1938, to September 15, 1940.

Union agrees to supply efficient journeymen for the employer, but if none available, the employer may advance the senior apprentice who shall then be paid the journeyman's rate.

Hours: 8 per day, 5 days per week, a 40-hour week. Until June 1, 1939, there was to be a 44-hour shop operation and if members of the union competent for the particular work were not available, the regular workers might work 44 hours at regular rates; from June 1, 1939, however, the shops were only to operate an 8-hour day and 5-day week with no operation of the plant on Saturday.

Overtime: from regular quitting time until 10 p.m., time and one-half; from 10 p.m. to 7 a.m., double time; from 7 a.m. to regular starting time, time and one-half. Double time for work on Sundays and eight specified holidays.

Wages for journeymen electrotypers and stereotypers: $1 per hour for day work; night rate $5 per week over the day scale.

Apprentices: in electrotyping, one allowed to each branch of the business, that is one to the foundry and one to the finishing department; in stereotyping, one apprentice allowed in any job or column-plate foundry where two stereotype journeymen are regularly employed. Apprentices to serve six years. When finished he will continue as an apprentice until a vacancy occurs for a journeyman.

Disputes to be referred to a conciliation board, jointly appointed, and if necessary a chairman will be chosen by this board, the decision of this board to be final and binding.

Saskatoon, Saskatchewan. — A Certain Weekly Newspaper and Job Office Establishment and the International Printing Pressmen and Assistants' Union, Local 206.

This agreement which came into effect November 1, 1938, has been renewed to October 31, 1940.

The agreement to be controlled by the by-laws and constitution of the international union.

The union agrees to furnish capable men for the work.

Newspaper Work

Hours: 8 per day, a 48-hour week for day work, and 7½ per night, a 45-hour week for night work. On all holidays, 5 hours to constitute a night's work, to be paid for as a regular night's work.

Overtime: time and one-half for first three hours; thereafter and all work on Sundays and seven specified holidays, double time.

Minimum wage rates: journeyman pressman $43.20 per week for day work, with $3 per week extra for night work; pressman in charge $5 per week over journeyman scale; assistant from 33⅓ per cent of journeyman's scale during first year to 80 per cent during fifth year.

Job Printing Work

Hours: 8 per day, 4 on Saturdays, a 44-hour week for day work; 7 per day for five days, 6 on seventh, a 41-hour week for night work.

Overtime: time and one-half for first three hours; thereafter and all work on Sundays and seven specified holidays, double time.

Minimum wages on cylinder press: journeyman pressman $39.60 per week for day work, with $3 per week extra for night work; assistants from 40 per cent of journeyman's scale during first year to 80 per cent during fourth year; feeders 33⅓ per cent of journeyman's scale during second year (no rates fixed for first year). Minimum wages for journeymen pressmen on offset presses: $48.50 per week.

The term of apprentice or assistant is four years, such apprentice to be a feeder of at least two years. One apprentice allowed up to four journeymen.

Manufacturing: Metal Products

Saint John, N.B.—St. John Dry Dock and Shipbuilding Company Ltd. and the Steelworkers Union, Local No. 1 (Iron Shipbuilders, etc.).

See below under "Construction: Shipbuilding."

Vancouver, B.C.—Certain Dry Dock and Shipbuilding Firms and the Boilermakers' and Iron Shipbuilders' Union of Canada, Local No. 1 (Iron Shipbuilders, etc.).

See below under "Construction: Shipbuilding."

Vancouver, B.C.—A Certain Dry Dock and Shipbuilding Company and the Amalgamated Building Workers of Canada, Electrical Workers' Shipyard Section (Electrical Workers).

See below under "Construction: Shipbuilding."

Construction: Buildings and Structures

London, Ontario. — London and District Society of Domestic Sanitary and Heating Engineers and the United Association of Plumbers and Steamfitters, Local 593.

Agreement to be in effect from November 1, 1939, to April 30, 1940, and thereafter from year to year subject to notice.

Only union members and duly indentured apprentices to be employed. Foremen to be selected by the business manager of the union.

Hours: 8 per day from Monday to Friday, a 40-hour week.

Overtime: time and one-half till midnight; thereafter and all work on Saturdays, Sundays and eight specified holidays, double time, except Saturday between 8 a.m. and 12 noon on jobbing work only.

Minimum wage rate for journeymen plumbers and steamfitters: 80 cents per hour; junior mechanics (fifth year apprentices) 55 cents.

For work out of city, fare and board to be paid by employer and also travelling time.

One junior mechanic allowed in any shop to each branch of the trade; except when there are more than five journeymen plumbers or five journeymen steamfitters employed when two junior mechanics allowed to six journeymen, three to eleven journeymen and four to sixteen journeymen. Apprentices are to be employed in accordance with the Ontario Apprenticeship Act.

A joint conference board to be formed for the settlement of any disputes. If they are unsuccessful in settling a dispute, it shall be referred to the general office of the International Association of Plumbers and Steamfitters and no strike or lockout to occur pending the decision of an officer of that association.

WINDSOR, ONTARIO.—CERTAIN ELECTRICAL CONTRACTORS OF THE COUNTY OF ESSEX AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL UNION B-773.

Agreement to be in effect from September 5, 1939, to May 1, 1940, and thereafter from year to year subject to notice.

Only union members to be employed.

Hours: 8 per day, Monday to Friday, a 40-hour week. When, however, 10 per cent or more of the members of the union are out of work, union members shall not work more than 30 hours in a week at the straight time rate.

Overtime and all work on Saturdays, Sundays and six specified holidays, double time.

Minimum wage rate for journeymen electrical workers: $1.15 per hour (no change from the previous rate). Any job with four or more journeymen to have a foreman who must be paid 10 per cent over the journeymen's rates.

Apprentices to be indentured under the Ontario Apprenticeship Act, and paid from 35 cents per hour during first year to 75 cents during fourth year. Not more than one apprentice to each three journeymen in any shop or job.

When men report to work at starting time they shall receive not less than four hours' pay.

No union member may make contracts for repairing or installing electrical work while he is in the employ of the employer. Members of the union will not work for other employers unless they comply with the working rules of this agreement.

A joint conference committee to be formed for the settlement of any dispute, and if they are unsuccessful in settling any dispute it will be referred to the Council on Industrial Relations for the Electrical Construction Industry of the United States and Canada, whose decisions will be final and binding.

Construction: Shipbuilding

SAINT JOHN, N.B.—SAINT JOHN DRY DOCK AND SHIPBUILDING COMPANY LIMITED AND THE STEELWORKERS UNION, LOCAL NO. 1 (IRON SHIPBUILDERS, ETC.).

The agreement followed conferences brought about by conciliation officers of the federal Department of Labour.

Agreement to be in effect from February 10, 1940, to March 1, 1941, and thereafter from year to year, subject to notice.

In no case shall members of the duly elected committee be discriminated against.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. When three shifts are worked, one hour to be allowed for lunch, 30 minutes of which will be on Company's time and the balance on men's time, that is 7 hours to be worked for 7½ hours' pay. Any man ordered out to work, if he reports and is not given work, to be paid for two hours' time.

Overtime: If, while working on an ordinary day shift, it is necessary to work men through a meal hour, straight time to be paid for that hour but double time after that hour until given time off for meal. Overtime to be paid at time and one half for first six hours on Mondays to Fridays, for the first four hours on Saturday; double time thereafter. For work on Sundays and nine holidays, double time. In case of piece work, price and one half to be paid for work done during time overtime rate is time and one half, and double price for work done during time overtime rate is double time.

Minimum hourly wage rates: acetylene welders, electric welders, burners, caulkers and chippers (steel) and riveters, 70 cents; liner fitters 55 cents, bulkhead packers 52 cents, holders-on 58 cents, rivet heaters 52 cents; drillers, reamers and countersinkers 48 cents, bolters-up (machine) 50 cents, bolters-up (hand) 45 cents, erectors 43 cents, helpers to above trades 43 cents, passer boys 31 cents. Gang foremen to be paid 5 cents per hour extra. Rates for improvers and beginners to be determined by the superintendent. Piecework rates for repair work are established, with the provision that 10 per cent be deducted from these prices for new construction. (The wage rates have been increased by about 7½ per cent by this agreement.)

For all work in oil tanks, bilges, engine room tanks, etc., unless these are steamed and cleaned out, a bonus of from 5 to 10 cents per hour is payable; but if these tanks are not previously steamed out, all such work is to be paid at time and one half.

Work is to be divided as far as possible among employees in the various trades who comprise a list forming part of the agreement and no others are to be employed until all these men are working. There is also a second list of men who are to be employed after all the first list is working, before any outside men are employed. In case of layoff the same principle to apply, new men to be laid off first, then those comprising the second list and only then those on the first list.

Any employee who considers he has been unjustly dealt with may take the matter up with his foreman and later, if necessary, with his committee and higher company officials. Failing an adjustment both parties agree to arbitrate, as provided for by the Provincial Act respecting Labour and Industrial Relations. While the case is pending, there shall be no strike or lockout.

VANCOUVER, B.C.—CERTAIN DRY DOCK AND SHIPBUILDING FIRMS AND THE BOILERMAKERS, AND IRON SHIPBUILDERS' UNION OF CANADA, LOCAL NO. 1 (IRON SHIPBUILDERS, ETC.).

Agreement to be in effect from January 2, 1940, for the duration of the war and thereafter until the completion of any contracts entered into previous to the cessation of hostilities.

No discrimination against any employee belonging to the union. Only union members to be employed, if available.

Hours: 8 per day, 44 per week for day work. In shift work, the second shift to be from 4.50 p.m. to 12.30 a.m. with a 20-minute lunch period, for which 8 hours pay to be allowed; the third shift to be from 12.30 a.m. to 8 a.m. with a 20-minute lunch period, for which 9 hours' pay will be allowed; 40 hours to constitute a week's work for second and third shifts.

Overtime: time and one-half for the first four hours and double time thereafter; double time for work on Sundays and nine specified holidays.

Wages: acetylene welders and burners, anglesmiths, boilermakers, electric welders, riveters, chippers and caulkers, shipfitters, drillers,

tappers, and packers, 90 cents per hour, $7.20 per day; ironworkers' helpers 67 cents per hour, $5.36 per day; rivet heaters 68 cents per hour, $5.44 per day; reamers and countersinkers 70 cents per hour, $5.60 per day; punch and shearmen, holders-on, drilling out rivets 76 cents per hour $6.08 per day; passer boys under 21 years, 45 cents per hour, $3.60 per day. These rates are "subject to adjustment quarterly in accordance with the cost of living, and wages to be increased or decreased in equal percentage to the increase or decrease in cost of living, as ascertained by the Department of Labour of the Provincial Government of British Columbia, it being understood that the cost of living figures as at December 1, 1939, be the basis of this arrangement. It is also understood that the above rates are to be the minimum rates to be paid during the life of the agreement."

Time and one-quarter to be paid for all dirty work and work in confined places full of gas as a result of rivet fires and torches, as in forepeaks, tanks, etc., the foreman, shop steward and committee to decide work to be so classed.

Every man to be paid not less than 4 hours if hired after starting time, or if hired after 4.50 p.m. or after 12.10 noon on Saturdays or on Sundays or holidays.

No mechanic of this union to be allowed to work as a helper while there are helpers of the union available.

Vancouver, B.C.—A Ship Repair Company and the Amalgamated Building Workers of Canada, Electrical Workers' Shipyard Section (Electrical Workers).

Agreement to be in effect from February 14, 1940, to February 13, 1941, and thereafter from year to year subject to notice.

This agreement (North Vancouver) is the same as the one with a shipbuilding company at North Vancouver which was summarized in the Labour Gazette, November, 1939, page 1180, the wage rate for journeymen electrical workers being $1 per hour, helpers 45 cents per hour during first year and 62½ cents during second year, with a 44-hour week for day shift and 40 hours for second and third shift.

Transportation and Public Utilities: Telegraphs and Telephones

Province of Alberta.—Schedule of Wages and Hours Governing Telephone Operators Employed by Alberta Government Telephones.

These regulations and wage schedule have been in effect since April 1, 1938.

This schedule covers the telephone service for the province except the following: The Edmonton local exchange is operated by the city; that for Banff is operated by the Dominion Government; there are also 770 mutual telephone companies for rural localities having connecting facilities with the provincial system. Operators on local traffic in Edmonton are employed by the city of Edmonton and are included with other members of the Civic Service Union, Local 52, in the agreement with the city of Edmonton which was summarized in the Labour Gazette, May, 1939, page 524.

Telephone offices are divided into four classes: Class A offices are Calgary, Edmonton and Lethbridge; class B comprises 20 other of the more important large telephone centres; class C comprises 9 smaller offices; class D comprises 3 exchanges operated on a commission basis.

Hours: in class A offices, 7 per day, 6 days per week; night operators from 10 p.m. to 8 a.m. with three hours rest period and one night off in seven. In class B, class C and class D offices, 7 hours per day; night operators' hours from 10 p.m. to 8 a.m. which is considered as equivalent to a 7-hour shift.

Overtime: in class A and class B offices, time and one-half for overtime and work on nine specified holidays. Overtime is not mentioned for the class C offices and class D offices.

Wages per month in class A offices: supervisors $94 during first year, $96 during second year and $98 thereafter, senior supervisor $100; student operators $45 during first three months and $49 during second three months; operators from $54.50 during first six months, to $90 after six years.

Wages per month in class B offices: from $41 during first three months (student period) to $76.50 after six years except for night operators whose maximum is $65.

Wages per month in class C offices: from $41 during first three months (student period) to $70 after fourth year except for night operators whose maximum is $65.

Wages per month in class D offices: from $41 during first three months (student period) to $60 after 18 months.

The periodic increases in pay are subject to the approval of the district traffic superintendents.

Vacation: a vacation of two weeks with pay to be allowed operators with one year or more service.

Sick leave with pay is allowed employees as follows: casual illness with a maximum of 10 days during a calendar year will be allowed with pay. Commencing with the second week of a continual illness, an operator with one year's service or more, on presentation of medical certificate to be allowed: two weeks' full pay during second year; four weeks' full pay and nine weeks' half pay during third, fourth and fifth years; 13 weeks' full pay and 13 weeks' half pay during sixth to tenth service years, and 13 weeks' full pay and 39 weeks' half pay during eleven and subsequent service years.

Transportation and Public Utilities: Electricity and Gas

Toronto, Ontario.—Schedule of Wages and Working Conditions for Hourly Paid Employees of the Toronto Hydro Electric System.

This schedule of wages and working conditions, recently agreed upon by the Toronto Electric Commissioners and their employees who are members of the Canadian Electrical Trades Union Branch No. 1, embodies conditions as to wages and working conditions which have been in effect with minor exceptions, since July, 1929.

Hours: for employees on shift work, which includes all employees in the station operating

and garage departments, 8 hours per day, a 48 hour week; for other hourly paid employees, 8 per day Monday to Friday, 4 on Saturdays, a 44 hour week.

Overtime for employees on shift work: except distribution troublemen, such employees to be paid time and one-half for first five hours and double time thereafter until released; for distribution troublemen all time worked over and above the first hour following their regular shift is to be paid at time and one-half. Overtime for employees not on shift duty: time and one-half to be paid for work between 7 a.m. and 8 a.m., between 5 p.m. and 10 p.m. and on Saturday between 12 noon and 5 p.m.; double time for work between 10 p.m. and 7 a.m., between 5 p.m. and midnight on Saturday and for all work on Sundays. In computing accumulated overtime, such hours are expressed in terms of straight time hours, e.g. ten hours worked during the double time period would be counted as 20 hours accumulated overtime. Regular employees receiving two weeks' vacation and statutory holidays with pay are expected to work two normal weeks time per calendar year, computed overtime without pay; regular employees receiving three weeks' vacation but not receiving statutory holidays with pay are expected to work two normal weeks' time per calendar year, computed overtime, without pay; regular employees receiving three weeks' vacation and holidays are expected to work three normal weeks' time per calendar year, computed overtime without pay. By accumulating overtime, without pay, certain employees may thus accumulate sick leave with pay up to the maximum of two weeks' in any year; this sick leave may be accumulated from year to year.

Wages per hour: overhead section—linemen 73 to 91 cents, groundmen 60 and 63 cents, mechanics on transformer repair 73, 75 and 83 cents, carpenter on transformer repair 83 cents, helper 63 and 68 cents; overhead troublemen 97·7 cents and $1; underground section—cable joiners 80 to 91 cents, cable joiners' helpers 68 cents, subforemen 83 cents and $1, wiremen 75 and 87 cents, helpers 63 and 68 cents, casual labour 60 cents; street lighting section—repairmen 73 and 83 cents, helpers 63 cents, patrolmen 67½ cents, cleaners 60 cents; station construction—troublemen and subforemen $1, mechanics 79 to 91 cents, helpers 64 and 67 cents, bricklayers $1, carpenters 87 cents, painters 75 cents, machinists 79 and 87 cents; station operating section—relief operators 93 cents, operators 83 to 91 cents, assistant operators 64 to 75 cents, cleaners 60 cents; meter section—installers 71 to 87 cents, helpers 60 and 66 cents, testers and repairmen $29.50 to $37.50 per week, testers' and repairmen's helpers $20 and $26.40; stores section—$26.40 to $29 per week; garage section—carpenter 96 cents, machinist 92 cents, painter 90 cents, mechanic 75 to 92 cents, stockkeeper 64 cents, tire repairer 70 cents, driver 65 cents; night men—mechanics 80 and 85 cents, utilityman 60 and 75 cents.

Vacations and sick leave are granted in return for unpaid overtime as noted above in the overtime provisions.

Seniority in the grade, other things being equal, is basis for promotion.

MOOSE JAW, SASK.—NATIONAL LIGHT AND POWER COMPANY AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS LOCAL 802.

This agreement which originally came into effect May 1, 1933, was amended January 1, 1938, and is to remain in effect subject to notice.

Hours: 8 per day, 4 on Saturdays, a 44 hour week, except for regular troublemen.

Minimum wage rates: sub line foreman 82½ cents per hour, journeymen linemen 80 cents first class, 65 cents second class, troublemen $148 per month. Any lineman placed in charge of two or more men to be paid 2½ cents over the regular journeyman's rate.

Apprentices to serve four years.

Vacation: all employees with one year's or more service to be entitled to two weeks' vacation with pay.

Sick leave: employees with one year's or more service to be paid one-half the regular pay for a period not exceeding three weeks of time lost through personal illness in any one year.

Collective Labour Agreements Act, Quebec

The following agreements and amendments to agreements have recently been made obligatory by Order in Council and are summarized in the next article:

Bakers, Three Rivers (amendment).

Tanning Industry, Province of Quebec.

Fine Glove Cutters, Operators and Blockers, Province of Quebec.

Work Glove Cutters, Province of Quebec.

Textile and Jute Bag Manufacturing Industry, Montreal (amendment).

Railway and Tramway Car and Bus Manufacturing Industry, Montreal.

Paint Manufacturing Industry, Province of Quebec.

Plumbers and Tinsmith Roofers, Three Rivers.

Building Trades, St. John and Iberville (amendment).

Hairdressers, Montreal (amendment).

Industrial Standards Acts

The following schedule and amendment have recently been made binding by Order in Council and are summarized in a special article below:

ONTARIO

Hard Furniture Industry, Province.

SASKATCHEWAN

Barbers, North Battleford (amendment).

COLLECTIVE LABOUR AGREEMENTS ACT, QUEBEC

Recent Proceedings Under the Act

THE Collective Labour Agreements Act which was assented to March 18, 1938, amends the Act respecting Workmen's Wages, 1937, by changing the title of the Act and by certain other changes which are summarized in the May, 1938, issue of the Labour Gazette, page 503. Amendments to the Act are noted in the Labour Gazette, June, 1939, page 576. Agreements and regulations under the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Labour Agreements Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act, made obligatory on all employers and employees in the trade, industry, commerce or occupation within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable, with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date of publication of the Order in Council in the *Quebec Official Gazette,* or its provisions may be made retroactive for a period not exceeding four months. The Order in Council may be amended or revoked at any time by the Lieutenant-Governor in Council and such amendment or revocation must be published in the *Quebec Official Gazette.* Unless otherwise stipulated, these agreements do not apply to provincial government departments or services or to work done by a third party for the provincial government under a contract providing for a scale of minimum wages. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette,* the committee is constituted a corporation. A joint committee may require certificates of competency from workers within the scope of the agreement in cities and towns of 5,000 or more and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette.* Proceedings under the Collective Labour Agreements Extension Act were summarized in the Labour Gazette from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issue beginning May, 1938.

Recent proceedings under the Act include the extension of six agreements, the amendment of four other agreements, all of which are summarized below. A request for the extension of a new agreement affecting building trades at Joliette was published in the *Quebec Official Gazette,* February 3; a request for the extension of the agreement affecting the can, container and metal utensil manufacturing industry throughout the province, in the issue of February 10; and one for building trades at Three Rivers in the issue of February 24. In addition, Orders in Council were published in the *Quebec Official Gazette* of February 10 and 24 authorizing certain joint committees to levy assesments, as listed below.

Manufacturing: Vegetable Foods

Bakers, Three Rivers.—An Order in Council, approved February 1, and published in the *Quebec Official Gazette,* February 10, amends the previous Order in Council for this trade (Labour Gazette, March, 1938, page 334) by increasing the minimum wage rate for bakers by $2 per week, for apprentices by $1 per week, the new rates being $25 per week for first journeyman baker, $21 for second journeyman baker and $18 for other journeymen bakers; apprentice rates are now $7 per week during first year, $9 during second year and $13 during third year. The minimum rate for distributors of bread, cake and pastry remains at $15 per week, these workers being paid $9 plus commission, but the commission is raised from 7 to 9 per cent.

Manufacturing: Fur, Leather and Miscellaneous Animal Products

TANNING INDUSTRY, PROVINCE OF QUEBEC.—An Order in Council, approved February 5, and published in the *Quebec Official Gazette*, February 10, makes obligatory for the first time the terms of an agreement between certain employers in the leather tanning and currying, etc. industry and Le Syndicat Catholique des employés de tanneries de Québec, Inc. (The Catholic Union of Employees of Tanneries of Quebec, Inc.).

The agreement, which governs conditions in this industry throughout the province, is to be in effect from February 10, 1940, to February 9, 1941, and thereafter from year to year, subject to notice.

Hours: 60 per week for stationary enginemen and maintenance men (millwrights), 72 per week for watchmen, 55 hours for all other employees.

Overtime including work on Sundays and nine specified holidays, for all employees except watchmen, to be paid at time and one-half. For workers being paid higher than the minimum rates, overtime to be paid at the hourly rate actually paid to the wage earner concerned increased by half the highest minimum rates in each zone which are fixed by this agreement.

The province is divided into three zones: zone I, the Island of Montreal and the city of Quebec and municipalities totally within a radius of 10 miles from the Island of Montreal and the city of Quebec; zone II, any other city of a population of 10,000 or more; zone III, the rest of the province.

Minimum hourly wage rates: at least 60 per cent of male employees, including all stationary enginemen and maintenance men (millwrights), and at least 60 per cent of female employees to be paid 40 cents in zone I, 37 cents in zone II and 32 cents in zone III; not more than 25 per cent of male employees including all watchmen, and not more than 25 per cent of female employees to be paid 30 cents in zone I, 28 cents in zone II and 23 cents in zone III; not more than 15 per cent of the male employees and 15 per cent of female employees to be paid 20 cents in zones I and II and 16 cents in zone III. Any piece-work rates already established if higher than those fixed by this agreement may not be reduced. Employees may agree with their employer upon piece-work rates providing the above minimum hourly rates are maintained.

No employee may have a helper who is not directly employed by the employer.

The employer to supply the necessary aprons and tools to do the work.

Employers are to issue certificates of competency to their employees, which shall state to which percentage group they belong and these may only be changed with the consent of the joint committee. The joint committee's decision in case of any dispute is to be final and binding.

FINE GLOVE CUTTERS, OPERATORS AND BLOCKERS, PROVINCE OF QUEBEC.—An Order in Council, approved February 15, and published in the *Quebec Official Gazette*, February 17, makes obligatory an agreement between certain manufacturers of fine gloves and La Fédération Nationale des Gantiers du Canada (The National Federation of Glove Makers of Canada).

The agreement is to be in effect from January 1, 1940, to December 31, 1940, and is similar to the one previously in effect and summarized in the LABOUR GAZETTE, April, 1939, page 434, with this exception:

Wage rates have been increased by 10 per cent, except wages of apprentices which are unchanged.

WORK GLOVE CUTTERS, PROVINCE OF QUEBEC.—An Order in Council, approved February 15, and published in the *Quebec Official Gazette*, February 17, makes obligatory the terms of an agreement between certain manufacturers of work gloves and La Fédération Nationale des Gantiers du Canada (The National Federation of Glove Makers of Canada).

This agreement, which governs wages and working conditions for glove cutters in the work gloves manufacturing industry throughout the Province of Quebec, is to be in effect from January 1, 1940, to December 31, 1940, subject to renewal for another year if neither party gives notice 30 days before December 31, 1940.

The agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, April, 1939, page 435, with the exception of a new wage scale (piece rates) which are higher than the previous rates.

Manufacturing: Textiles and Clothing

TEXTILE AND JUTE BAG MANUFACTURING INDUSTRY, MONTREAL.—An Order in Council, approved February 1, 1940, and published in the *Quebec Official Gazette*, February 10, amends the previous Order in Council for this industry (LABOUR GAZETTE, May, 1939, page 527) by extending the terms of the agreement to December 31, 1940.

Manufacturing: Metal Products

RAILWAY AND TRAMWAY CAR AND BUS MANUFACTURING INDUSTRY, MONTREAL.—An Order in Council, approved February 1, and published in the *Quebec Official Gazette*, February 10, makes obligatory the terms of an agreement between The Canadian Car and Foundry Co. Ltd. and the Association of Canadian Car and Foundry Company Employees of Turcot and Dominion Works.

The agreement is to be in effect from December 1, 1939, to November 30, 1940, and for a further 30 days if negotiations are in progress at the expiration date.

This agreement which is applicable to the Turcot and Dominion plants of the company, is similar to the one previously in effect and summarized in the LABOUR GAZETTE, October, 1938, page 1171, and November, 1938, page 1299, with a few additional classes of workers with their wage rate in one department and certain other changes in conditions.

Manufacturing: Non-Metallic Minerals, Chemicals, Etc.

PAINT MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC.—An Order in Council, approved

February 5, and published in the *Quebec Official Gazette,* February 10, with correction in the issue of February 17, makes obligatory throughout the Province of Quebec the terms of an agreement between the Canadian Paint, Oil and Varnish Association and the Association of Employees of the Paint Industry.

Agreement to be in effect from January 1, 1940, to December 31, 1941, and thereafter from year to year, subject to notice.

Hours: 45 per week (a decrease of 3 hours from the previous agreement); employees on continuous operations, that is boiler house employees and workmen in white lead and linseed oil manufacturing shall at all times including Sundays and legal holidays, operate on a 56-hour weekly basis; shipping clerks, stock keepers, time keepers, janitors, stationary enginemen, firemen and watchmen not to work more than 56 hours in any one week.

Overtime: time and one-quarter.

Employees may be employed either by the hour or by the piece, but in either case to be paid at least the minimum hourly rates given below.

Minimum hourly wage rates (which are in most cases increases of 2½ or 5 cents per hour over previous rates): In paint and lacquer factory—labourers, mixers' helpers, millmen's helpers, fillers and general helpers, 37½ cents; mixers and millmen 42½ cents; shaders 45 cents during first two years and 50 cents after two years; charge hands 50 cents. In varnish factory—labourers, fillers and general helpers 37½ cents; kettlemen 50 cents; varnish makers 65 cents; charge hands 50 cents. In white lead and dry colour factory—labourers 37½ cents, grinders 40 cents, pressmen 42½ cents, colour strikers 50 cents, charge hands 55 cents. In receiving, packing and shipping department—charge hands 45 cents, general helpers 37½ cents; shipping clerks, stock keepers and time keepers $20 per week; janitors, stationary enginemen, firemen and watchmen $20 per week; coopers and mill dressers 50 cents; maintenance men, including carpenters, electricians, plumbers, machinists, blacksmiths, etc. 55 cents. (Stationary enginemen may never be paid less than any rate established by special ordinance of the Fair Wage Board for them.) For overprinting labels and multigraphing—male employees under 18 years of age 27½ cents, male employees 18 years of age and over 37½ cents (not, however, governing employees included in the printing trades agreement). For apprentices, 25 cents if under 18 years of age, 30 cents if 18 years or over. For female employees in all factory departments—20 per cent of those employed to be paid at least 17 cents per hour, 15 per cent at least 22 cents and 65 per cent at least 26 cents. In linseed oil department—labourers 37½ cents, hydraulic press or expeller men 40 cents, maintenance men 55 cents. Handicapped employees may be paid lower rates, if such are determined by the joint committees.

Vacation: one week's vacation for all employees with one year or up to 10 years' service; after 10 years' service, one extra day for each year of service with a maximum of two weeks' vacation, with pay.

Not more than one apprentice allowed to each 15 employees in each plant. Apprenticeship to be not more than two years.

Disputes arising out of the classification of any employee to be referred to the conciliation officers appointed by the employees in each plant; and failing a satisfactory decision, to be settled by the joint committee.

Construction: Buildings and Structures

Plumbers and Tinsmith Roofers, Three Rivers.—An Order in Council, approved February 5, and published in the *Quebec Official Gazette,* February 10, makes obligatory the terms of an agreement between L'Association des Maîtres plombiers des Trois-Rivières et district (The Association of Master Plumbers of Three Rivers and district) and L'Union nationale catholique des plombiers, inc. des Trois-Rivières (The National Catholic Union of Plumbers, Inc. of Three Rivers).

The agreement is to be in effect from January 1, 1940, to January 1, 1941, and thereafter from year to year, subject to notice.

The agreement which governs wages and conditions for plumbers, steamfitters, cooling system workers and tinsmiths (excluding the pulp and paper industry) is in effect in the Counties of Maskinonge, St. Maurice, Laviolette, Champlain and Three Rivers. This district is divided into two zones: zone I being municipalities of 10,000 and more and also contracts of $10,000 in the rest of the district; zone II is the rest of the district for contracts of less than $10,000.

Hours: 8 per day, 48 per week.

Overtime: time and one-half for work between 6 p.m. and 7 a.m. and all work on Sundays and on three holidays. Urgent or special work which cannot be done during daily working periods may be done at other time as provided by permit of the joint committee, at straight time.

Minimum hourly wage rates: journemen 55 cents in zone I and 50 cents in zone II; junior journeymen (journeymen during the first two years of practice after finishing their apprenticeship) 45 cents in both zones. Foremen to be paid at least 10 cents per hour extra. Contractors working personally to be paid 20 cents per hour extra. Labourers to be paid 40 cents in zone I and 35 cents in zone II.

Handicapped workers may be paid lower wage rates if set by the joint committee.

Not more than one junior journeyman may be employed to each five journeymen or fraction thereof.

Wages for apprentices to be 10 cents per hour during first year to 35 cents during fourth year.

Travelling and board expenses to be paid by employer for all employees sent to work out of the towns in which they live, and travelling time during working hours.

Building Trades, St. John and Iberville.—An Order in Council, approved February 5, and published in the *Quebec Official Gazette,* February 10, amends the previous Order in Council for this industry (Labour Gazette, November, 1938, page 1299).

The territory is extended to include the area within a radius of one mile of St. John and of Iberville.

Hours are unchanged at 44 per week except labourers who may work 50 hours; overtime to be paid at time and one-half, work on Sundays and holidays at double time.

All wage rates, including wage rates for apprentices, are increased by 5 cents per hour, except sprinkler fitters and structural iron workers, which two trades are no longer included in this wage scale but in the whole province are under the jurisdiction of the Montreal building trades agreement.

The new minimum building rates are as follows:

Trades	Hourly rates
Bricklayers, plasterers, masons, including cutters on the field	$ 0 70
Carpenter joiners, erectors of screens (wood or metal), sashes, windows, steel partitions, joiners, concrete forms (shop or job) wood floor makers	0 55
Weatherstrippers	0 55
Electricians	0 60
Enginemen (hoist)	0 55
Enginemen (steam mixer)	0 55
Enginemen (gasoline mixer)	0 40
Compressor operators	0 50
Hod carriers	0 40
Common labourers*	0 40
Lathers (wood or metal)	0 55
Marble setters	0 70
Painters, sprayers, decorators, glaziers, paper hangers, floor varnishers	0 53
Plumbers, steamfitters and pipe mechanics:	
Journeymen	0 60
Junior journeymen	0 50
Roofers: asbestos, slate, tile and composition:	
Journeymen	0 55
Helpers	0 40
Sheet metal workers	0 60
Terrazzo layers	0 55
Men working on the machine for the polishing of terrazzo:	
Dry polishing	0 50
Water polishing	0 45
Tile setters	0 65
Cement finishers	0 40

*Common labourers may be enginemen on gasoline mixers, hod carriers, journeymen roofers' helpers and cement finishers' helpers.

Service: Business and Personal

HAIRDRESSERS, MONTREAL.—An Order in Council, approved February 1, and published in the *Quebec Official Gazette*, February 10, amends the previous Order in Council for this trade (LABOUR GAZETTE, August, 1939, page 862) by providing that the agreement be in effect to April 30, 1940.

Joint Committees

Notices were published in the *Quebec Official Gazette*, February 10 and 24, that authorization was given by Orders in Council for the joint committee to levy assessments on employers and employees, parties to the following agreements:

Barbers and Hairdressers, Chicoutimi.
Hairdressers, Montreal.
Building Trades, Hull.
Millinery Industry, Province.
Building Trades, St. John.
Building Trades, Montreal.

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Ontario and Saskatchewan

IN four provinces—Ontario, Alberta, Nova Scotia and Saskatchewan—legislation provides that, following a petition from representatives of employers or employees in any industry, the Provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zone designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. The administration and enforcement of the Act is placed in Ontario under the Industry and Labour Board, assisted by industrial standards officers; in Alberta under the Board of Industrial Relations; in Nova Scotia under the Minister of Labour, who may appoint inspectors; in Saskatchewan under the Commissioner of Labour and Public Welfare. Reviews of these Acts and amendments have been published in the LABOUR GAZETTE, as follows: Ontario, in the issues of June, 1935, page 530, May, 1936, page 410, May, 1937, page 505, May, 1938, page 501, and June, 1939, page 574; Alberta, in June, 1935, page 504, June, 1936, page 501, June, 1937, page 640, June, 1938, page 633, and June, 1939, page 567; Nova Scotia, in June, 1936, page 604, and July, 1939, page 671; Saskatchewan, in the issue of June, 1937, page 635, May, 1938, page 507, and June, 1939, page 581. Schedules of wages and hours

recently made binding by Orders in Council under these Acts are summarized below.

Similar legislation is in effect in Part II of the Fair Wages Act of Manitoba for certain industries (Labour Gazette, May, 1938, page 499, and June, 1939, page 570) and in the Industrial Standards Act of New Brunswick, 1939 (for the construction industry), in effect since August 10 (Labour Gazette, October, 1939, page 996). Up to the end of January, however, no schedules had yet been made obligatory in these two provinces.

Ontario

Manufacturing: Miscellaneous Wood Products

Hard Furniture Industry, Province of Ontario.—An Order in Council, approved January 23, and published in *The Ontario Gazette*, February 3, makes binding the terms of a schedule of wages and working conditions governing the hard furniture industry throughout the province of Ontario, from January 15, 1940, "during pleasure."

Hours: 8½ per day, 4½ on Saturday, a 47-hour week for day work, a 47-hour week for night shifts also.

Overtime, including work on eight specified holidays: time and one-quarter. (In the previous schedule overtime was payable at time and one-half.)

The province is divided into two zones: the first zone consisting of the city of Toronto, the counties of York, Peel, Halton, Wentworth, Lincoln, Welland, Haldimand, Norfolk, Brant, Oxford and defined parts of the counties of Wellington, Waterloo, Perth, Middlesex and Elgin; the second zone consists of the rest of the province.

Minimum hourly wage rates for all employees except those commencing work while under 21 years of age and who have not had four years' employment in a plant in the first zone: skilled employees 51 cents, semi-skilled employees 41 cents, unskilled employees 36 cents, with a minimum average of 41 cents per hour (increases of 2 cents per hour over the minimum rates of the previous schedule); for these same classes of workers in the second zone the minimum for skilled employees is 49 cents, semi-skilled employees 39 cents and unskilled employees 34 cents, with a minimum average of 39 cents (increases of 2 cents per hour over the minimum rates of the previous schedule). Employees who commence or who have commenced work in a plant while under 21 years of age and who have not had four years' employment in such plant may be paid the following minimum rates: 19 cents per hour during first year of employment, 22 cents during second year, 25 cents during third year and 28 cents during fourth year (an increase of one cent per hour over the minimum rates for these employees in the previous schedule). It is, however, provided that the number of employees to whom these lower minimum rates apply may not exceed 20 per cent of the total number of employees in a plant except plants where more than half of production consists of wood chairs in which case up to 25 per cent of the employees may be this class.

It is provided that no employer may reduce the wages of any employee receiving more than the minimum wage rates.

Special lower minimum rates may be fixed by the advisory committee for any employee who is below the average skill and ability of workers performing similar work in the same plant, and any rates so fixed, as well as wages of foremen, superintendent or manager, will not be considered in computing the average.

Saskatchewan

Service: Business and Personal

Barbers, North Battleford.—An Order in Council, approved January 27, and published in *The Saskatchewan Gazette*, February 15, amends the previous Orders in Council for this trade (Labour Gazette, January, 1940, page 71) by making certain changes in the minimum price scale.

Ninth Conference of Minimum Wage Administrators

The importance of extending orders fixing minimum wages for workers not yet covered was stressed in the Ninth Conference of Minimum Wage Administrators, held in November in Washington. According to a summary of the proceedings as reported in *The Woman Worker* (published by the Women's Bureau, United States Department of Labor), those to receive special state attention include the various service industries, clerical workers, employees of public institutions, home workers, and persons in local manufacturing industries, not under the Federal wage-hour provisions.

Administrators from 14 of the 26 minimum wage states and from the District of Columbia and Puerto Rico exchanged experiences as to effective details of orders and techniques of administration, and discussed points of legal procedure.

With large numbers of workers now covered by orders, attention was directed to the importance of enforcement, necessary appropriations for securing new inspectors and essential training for them. Some states require sworn copies of payrolls and assign inspectors to particular districts. Where sufficient force can be established, systematic efforts are made to inspect regularly once or twice a year, rather than to depend on chance complaints.

PRICES, RETAIL AND WHOLESALE IN CANADA, FEBRUARY, 1940

Cost of living, prices of staple articles and index numbers

THE movement in prices during the month was slight. The cost per week of a list of certain staple foods, fuel and lighting and rent entering into a family budget and the Dominion Bureau of Statistics weekly index number of wholesale prices were both little changed.

The cost per week of a list of twenty nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was $8.74 at the beginning of February as compared with $8.71 for January; $8.16 for February, 1939; $8.59 for February, 1938; $8.49 for February, 1937; $6.67 for March, 1933 (the low point in recent years); $11.83 for February, 1930; $10.61 for February, 1922; and $16.92 for June, 1920, the post war peak. Eighteen items in the list advanced in cost, seven declined and four were unchanged. The cost of eggs was again considerably lower while potatoes advanced substantially. Other changes were of a minor nature the most important being advances in beef, veal, cheese, bread, rolled oats, beans and tea and declines in lard and butter. Including the cost of fuel and rent with that of foods the total cost was $17.71 at the beginning of February; $17.67 for January; $17.06 for February, 1939; $17.39 for February, 1938; $17.12 for February, $1937; $22.12 for February, 1930; $21.07 for February, 1922; and $26.92 for July, 1920, the post war peak. In fuel there were slight increases in the cost of coal and wood.

In wholesale prices the Dominion Bureau of Statistics weekly index number on the base of 1926 as 100 advanced slightly during the month and was 82·8 for the week ended March 1 as compared with 82·2 for the week ended February 2 and 82·3 for that ended January 5. The latest figures available on a monthly basis are for January when the index number was 82·6 as compared with 72·4 for August, 1939; 73·2 for February, 1939; 83·6 for February, 1938; 82·9 for February, 1937; 63·5 for February, 1933 (the low point in recent years); 93·9 for February, 1930; 98·3 for February, 1922; and 164·3 for May, 1920, the post war peak. The advance in February was due in large part to higher prices for grains, copper, certain cotton fabrics, coffee, raw wool, and raw rubber. In the classification according to chief component materials the Vegetable Products group advanced two per cent and Textile Products one per cent. Changes in other groups were less than one per cent.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of February of seventy-two staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparisons from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by korkingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, les desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The cost of a list of staple foods, fuel and lighting and rent, entering into the budget of a family of five is calculated in terms of the average prices in the cities for which reports are received, and includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various

(Continued on page 294)

COST PER WEEK (IN TERMS OF THE AVERAGE RETAIL PRICES IN SIXTY-NINE CITIES IN CANADA) OF CERTAIN STAPLE FOODS, FUEL AND LIGHTING, IN THE QUANTITIES STATED AND RENT ENTERING INTO A FAMILY BUDGET.

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in Other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended March 1, 1940; monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(Continued from page 286)

authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of food tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the calculation serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the list of foods entering into the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%, Sundries, 20%.

being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Fresh meat prices at the beginning of February tended slightly upward. Sirloin steak averaged 28·3 cents per pound as compared with 28·1 cents at the beginning of January and veal averaged 17·8 cents as compared with 17·2 cents. Lard declined from an average of 12·8 cents per pound to 12·1 cents. The price of eggs was again substantially lower at 29 cents per dozen as compared with 33·9 cents in February and 41·5 cents per dozen in December. Creamery butter averaged slightly lower at 32·2 cents per pound. The price of cheese advanced in all localities the Dominion average being up from 24·3 cents per pound to 25·5 cents. Bread was fractionally higher at 6·6 cents per pound. The price of potatoes advanced in the average from $1.69 per 100 pounds to $1.86. Tea averaged 66·4 cents per pound as compared with 64·5 cents in January. Anthracite coal advanced from an average price of $14.95 per ton to $15.02. Bituminous coal and coke also averaged slightly higher.

The following are the prices reported for Welsh coal "cobbles" and "French nut" at the beginning of February, 1940; Halifax $17.75; Charlottetown $14.50-$15.50; Saint John $16; Quebec $14.75; Three Rivers $15.50 and $14.50; Sherbrooke $16.75; St. Hyacinthe $15; Thetford Mines $17.50; Montreal $15-$15.25; Ottawa $16.75; Kingston $16; Belleville $16.50; Peterborough $17.50; Oshawa $15.50; Toronto $15; St. Catharines $15.75; Hamilton $15-$15.50; Galt $16-$16.50; St. Thomas $16.50; Cobalt $20; Timmins $19.75; Port Arthur $18; Fort William $18; Winnipeg $20.50.

97325—8½

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries are included in *Prices in Canada and Other Countries, 1939,* issued as a supplement to the LABOUR GAZETTE for February.

Since these monthly notes are all compiled from British and foreign sources the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the LABOUR GAZETTE. In Great Britain both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

In most of the continental European countries some measure of control over prices and distribution has been put in force with consequent effect upon prices. In some of these countries the publication of price data has been suspended and in the case of Germany, direct information will henceforth be unobtainable although information contained in the official publications of neutral countries and in the press will be noted.

Great Britain and Northern Ireland

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 123·8 for January as compared to 120·9 for December, an increase of 2·4 per cent for the month. The index of food prices rose from 120·1 to 123·7 or 3·0 per cent while that for industrial materials and manufactures rose from 121·1 to 123·6 or 2·1 per cent. Of the eleven sub-groups which make up the "all articles" index ten groups showed increases over December, while that for cotton, which had risen 50·3 per cent between August and December, was unchanged at 122·4. The most important increases were in the meat, fish and eggs group which increased 6·1 per cent and the non-ferrous metal group which increased 6·8 per cent. Comparing the "all articles" index for January, 1940, with that for January, 1939, we find that there has been an increase of 27·4 per cent.

The Statist index number on the base 1867-1877=100, was 120·1 for December, as compared with 112·2 for November, an increase of 7·0 per cent for the month, which is a sharper rise than occurred any month during 1939 with the exception of the 10·3 per cent increase in September over the August level. The industrial materials group rose 8·9 per cent from November to December while the combined food groups rose 4·0 per cent. Prices of vegetable foods rose 9·1 per cent, while animal foods were unchanged and the index for sugar, coffee and tea declined 1·5 per cent. Prices of non-ferrous metal increased 19·4 per cent during the month and textiles increased 11·5 per cent. The general index for December, 1939 was 36·9 per cent higher than the corresponding figure for 1938.

COST OF LIVING.—The Ministry of Labour index number on the base July, 1914=100 was 177 at the beginning of February as compared with 174 at the beginning of January, an increase of 1·7 per cent for the month. The index of food prices increased from 157 to 161 or 2·5 per cent, due to increases in the prices of meat, fish, cheese, potatoes and eggs. The index of rents was unchanged at 162, that for clothing prices increased from 250 to 260 or 4·0 per cent, that for fuel and lighting materials increased 1·0 per cent to 202, while the index of prices of sundries was unchanged at 190.

India

WHOLESALE PRICES.—The index number of the Labour Office Government of Bombay, on the base July, 1914=100, was 121 for October as compared to 120 for September and 103 for August. The October index for food prices was 121 as compared with 118 for September while the index of non-food prices was 130 for October as compared with 125 the previous month. Of the 13 sub-groups which go into this index, eight showed increases while four were unchanged, and that for miscellaneous food showed a small decrease. The general index for October, 1939, was 21 per cent higher than that for October, 1938, which was 100.

COST OF LIVING.—The official index number of the working class cost of living at Bombay on the base July, 1933 to June 1934=100, was 109 for November, 1939, as compared with 108 for October. The index of food prices was unchanged at 119, that for fuel and lighting materials rose from 98 to 100 and that for clothing rose from 88 to 89. The indexes for house rent and sundries were unchanged at 100 and 98 respectively. The cost of living index f r November, 1938, was 106.

United States

Wholesale Prices.—The Bureau of Labor Statistics index number on the base 1926=100, was 79·4 for January as compared to 79·2 for December, an increase of 0·3 per cent for the month. Of the ten groups which make up the all commodities index, two showed increases, two were unchanged and six showed small decreases. The index of prices of farm products was up 2·2 per cent for the month. All other changes were less than one per cent. As compared with the all commodities index for January, 1939, that for January of this year showed an increase of 3·1 per cent.

Cost of Living.—The index number of the Bureau of Labor Statistics on the base 1913=100, was 143·2 on December 15, 1939, as compared with 144·2 for September 15, a decrease of 0·7 per cent for the quarter. The index of food prices declined 2·8 per cent while that for sundries declined 0·3 per cent. Rent was unchanged. The index of prices of furniture increased 1·4 per cent, that for fuel and lighting materials 1·3 per cent and that for clothing 1·0 per cent.

The index number of the Industrial Conference Board, on the base 1923=100, was 85·3 for December, 1939, as compared to 85·7 for November, a decrease of 0·5 per cent for the month. The index of food prices declined 1·4 per cent during the month while that for rent declined 0·1 per cent. The price indexes of the clothing, fuel and lighting materials, and sundries groups were unchanged. The cost of living index in December, 1939 was 0·6 per cent lower than in December, 1938.

FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1939

Analysed According to Industries, Localities and Months

An analysis of fatal industrial accidents in Canada during the calendar year 1939, by industries, causes, provinces, and months, is presented in the accompanying tables. The accidents recorded are those occurring to persons gainfully employed during the course of, or arising out of their employment; also included are fatalities from industrial diseases reported chiefly by provincial workmen's compensation boards. Quarterly statements, each giving a table of accidents occurring during the period covered, appeared in the Labour Gazette, for May, August and November, 1939 and February, 1940.

The record is compiled from reports from the following governmental authorities. The Board of Transport Commissioners of Canada; The Explosives Division of the Federal Department of Mines; The Workmen's Compensation Boards of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia; The Ontario Chief Factory Inspector; The Ontario Railway and Municipal Board; and the British Columbia Department of Mines. In addition reports were received also from the correspondents of the Labour Gazette resident in the principal industrial centres throughout Canada.

Industrial accidents reported in the press are also included in the record after inquiry has been made to avoid duplication. Most of the accidents in agriculture are recorded from press reports, and while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete. To a great extent, however, the information obtained from press reports is used to supplement information received from official sources.

Table I gives an analysis of accidents by industries and causes, Table II by provinces, and Table III by months. The last two tables also include summary figures for 1938, which are a final revision of the figures published in the Labour Gazette, March, 1939, by the inclusion of accidents occurring in 1938 which were reported too late for incorporation into the annual statements. These accidents were included in the supplementary reports in the Labour Gazette, for May, August and November, 1939, and February, 1940. The figures for 1939, being still incomplete, are accordingly to some extent not comparable with the completed figures for 1938.

In some industries, where considerable changes in figures from year to year appear, these may be attributed to changes in industrial conditions or to particular occurrences. For example, in the mining group there was a decrease in the number of fatalities from 253 in 1938 to 161 in 1939, which may be explained by the fact that during 1938 there were more major accidents in coal mining and metalliferous mining, each resulting in the loss of an increased number of lives in these industries. In the manufacturing group there was a decrease from 136 to 105, and in the construction group a decrease from 154 to 127, while the employment index figures for these groups of industries were slightly increased.

There was no major disaster resulting in the loss of a large number of lives during the

(a) Decennial census of 1931. (b) Annual census of industry 1937. (c) Annual census of industry 1938.
(d) Fishermen only, annual census of industry 1938. (e) Revised figures for 1938.

year under review. The most serious accident occurred at Quarryville, New Brunswick, on October 9, where six loggers were killed when a truck skidded into a bridge abutment, the brakes having failed. On March 2, four hotel employees lost their lives in a fire that destroyed a hotel at Halifax, Nova Scotia. On October 26, four miners lost their lives following a rock burst in a mine at Kirkland Lake, Ontario.

When an electric train struck their car, near Burnaby, British Columbia, a highway construction foreman and two labourers were killed, on March 9. On May 13, three loggers were drowned in Lesser Slave Lake, Alberta, when their boat burned. Two engineers and a brakeman were killed in a collision of two trains, near Sprague, Manitoba, on September 11. When a freighter crashed into their schooner, in the St. Lawrence River, near Deschaillons, Quebec, three members of the crew were drowned on July 22. A sewage inspector and two labourers were asphyxiated and drowned when overcome with gas in a septic tank, at Galt, Ontario, on July 11. On December 31, three coal miners were gassed in a mine at Cadomin, Alberta.

Fatalities by Causes

The classification of fatal accidents according to causes shows that the largest number, 291, came under the category "by moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse drawn vehicles, as well as accidents caused by moving implements (both those impelled by power and those drawn by horses), by moving watercraft and by aircraft (civil aviation). The largest number of accidents in this category, 105, appears under the heading "automobiles and other power vehicles and implements," 62 in the group headed "persons being struck or run over by, or crushed by or between cars and engines," (41 of these being engaged in steam railways); 57 were in connection with watercraft (11 of these being in logging, 19 in fishing and trapping, and 18 in water transportation); 19 were caused by animal drawn vehicles and implements; 15 were due to derailments and collisions (14 of which were in steam railways); 15 were caused by persons "falling from or in cars and engines"; 12 by mine and quarry cars; and 6 by aircraft.

Fatalities numbering 194 were caused by "falls of persons," classified as follows: 65 into pits, shafts, harbours, rivers, etc. (some of which resulted in drowning), 61 from elevations, 29 from loads, etc., 9 down stairs and inclines, 7 from ladders, 6 falls on the level, 5 due to collapse of support, 5 on sharp objects, 4 into tanks, vats, kilns, etc., and 3 into holds of vessels.

"Falling objects" caused 174 fatalities, of which 70 were due to trees and limbs, while 60 occurred in mines and quarries; of the remainder, 24 were due to objects falling from elevations, loads, piles, 10 to collapse of structure, 6 to breaking or loosening of straps, cables, etc., and 4 to other falling objects.

Next in order were "dangerous substances," causing 142 fatalities as follows: 40 due to electric current, 33 to explosive substances, 19 to hot and inflammable substances and flames, 16 to conflagrations, 16 to gas fumes, poison, etc., 13 to steam escapes, boiler explosions, compressed air, and 5 to mine explosions from gas, coal dust, etc.

Handling of objects caused 33 fatalities, 29 were caused by animals, (22 of which were due to horses), 28 by striking against or being struck by objects; 23 by hoisting apparatus; 21 by working machines; 13 by prime movers, and 3 by tools.

The category "other causes" includes 80 fatalities of which 38 were due to industrial disease, strain, etc.; 19 to lightning, frost, storms, sunstroke; 11 to cave-ins, land slides, ice jams, etc.; 9 to shooting and violence; 1 to drowning not elsewhere specified; and 2 concerning which no particulars were available.

Fatalities by Provinces

The classification of accidents according to provinces shows that the largest number, 375, occurred in Ontario. There were 232 in Quebec, 196 in British Columbia, 61 in Nova Scotia, 51 in Alberta, 42 in Manitoba, 36 in Saskatchewan, 7 in Prince Edward Island, and 2 in Yukon and Northwest Territories. In Ontario the fataleties occurred in the following industries: transportation and public utilities, 65; mining, non-ferrous smelting and quarrying, 64; agriculture, 59; construction, 51; manufacturing, 50; service, 34, logging, 24; trade, 15; electric light and power, 10; and fishing and trapping, 3. In Quebec, the largest number, 52, was in construction, with 46 in transportation and public utilities, 36 in agriculture, 26 in logging, 21 in manufacturing, 18 in mining, non-ferrous smelting and quarrying, 16 in service, 7 in trade, 7 in electric light and power, and 3 in fishing and trapping. In British Columbia there were 72 fatalities in logging, 38 in mining, non-ferrous smelting and quarrying, 26 in transportation and public utilities, 20 in manufacturing, 10 in construction, 9 in fishing and trapping, 7 in service, 6 in agriculture, 5 in

trade and 3 in electric light and power. In Nova Scotia the largest number, 18, was in mining, non-ferrous smelting and quarrying. In Manitoba the largest number, 13, was in transportation and public utilities. In Alberta and Saskatchewan, there were respectively 20 and 19 fatalities in agriculture and no other industry suffered so many fatalities in these provinces. In New Brunswick the largest number was in logging in which there were 10 fatalities.

Fatalities by Industries

The total number of fatalities recorded for the year was 1,031, classified under the various groups of industries as follows: transportation and public utilities, 174 or 16·88 per cent of the total; agriculture, 162 or 15·70 per cent; mining, non-ferrous smelting and quarrying, 161 or 15·62 per cent; logging, 141 or 13·68 per cent; construction, 127 or 12·32 per cent; manufacturing, 105 or 10·19 per cent; service, 70 or 6·79 per cent; trade, 38 or 3·69 per cent; fishing and trapping, 28 or 2·70 per cent; electric light and power, 25 or 2·43 per cent.

The table of fatalities by months indicates that the greatest number, 113, occurred in July, while the smallest total, 54, was recorded in February. The table gives the total number of persons gainfully employed in most of the industries, the latest census figures available being given in each case. For agriculture, logging, construction, trade, finance, service, etc., the figures were those of the decennial census for 1931, for manufacturing, from the annual census of industry for 1937, for mining, fishing, electric light and power, steam railways, street and electric railways, air transportation, telegraphs and telephones, and express, from the annual census of industry for 1938.

While the latest figures available as to numbers employed are not in any instance those for the year under review, they are included, however, for general comparative purposes.

Fatal and Non-fatal Accidents in Canada Recorded by Provicial Workmen's Compensation Boards

The Labour Department's records of industrial accidents include only fatal accidents and fatalities arising out of employment that is from industrial diseases, etc. The only information of a comprehensive nature as to non-fatal accidents is from the Workmen's Compensation Boards in the various provinces, except in manufacturing, mining, and steam and electric railway operation, in which accidents are dealt with by various governmental departments and commisisons. These are also covered by the Workmen's Compensation Boards.

The annual reports of the several Workmen's Compensation Boards are reviewed from time to time in the LABOUR GAZETTE, information being given as to accidents, amounts paid in compensation, etc. The annual reports of the Provincial Workmen's Compensation Boards for 1938 were summarized in the following issues: Alberta, Manitoba, New Brunswick, Nova Scotia and Saskatchewan, May, 1939, pages 487-490; Ontario, June, 1939, pages 591-592; Quebec, July, 1939, page 680; British Columbia, December, 1939, pages 1237-1238.

None of the provinces has jurisdiction over all industries, so that the accidents recorded are those in certain industries only. Most of the Boards deal with accidents in logging, mining, manufacturing, construction, transportation and public utilities, excluding agriculture, trapping, finance, domestic service, etc., but include to some extent fishing, trade and government service.

The accompanying table summarizes the figures as to non-fatal accidents recorded by the several Workmen's Compensation Boards for 1933, 1934, 1935, 1936, 1937, 1938 and also include some preliminary figures for 1939. It may be observed that the Department of Labour's figures show 1247 fatal industrial accidents as occurring during 1937, while the total number of fatal accidents which were included by the Provincial Workmen's Compensation Boards for that year was 714, exclusive of Prince Edward Island. This difference is largely accounted for by the fact that the Provincial Boards do not record accidents in all industries. In addition, however, the Board's records only show accidents to employees, while the records of the Department of Labour register accidents to all persons occupied in industry, including employers and workmen carrying on their own business, of whom, there are many, particularly in trucking, trade, etc., as well as in agriculture.

INDUSTRIAL ACCIDENTS, NON-FATAL AND FATAL IN CANADA, 1933, 1934, 1935, 1936, 1937, 1938 AND 1939 REPORTED BY PROVINCIAL WORKMEN'S COMPENSATION BOARDS

(a) Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for this compensation: The period varies in the several provinces; figures not reported by some boards.
(b) Preliminary figures.
(c) Subject to further revision.

RECENT LEGAL DECISIONS AFFECTING LABOUR

British Columbia Court Upholds Judgment Allowing Injunction and Awarding Damages Against Projectionists Union

WITH Chief Justice Martin dissenting in part although he agreed with the decision, the British Columbia Court of Appeal on September 19, 1939, dismissed the appeal of the defendants, officers and trustees of the local Union of the International Alliance of Theatrical Stage Employees and Moving-picture Machine Operators and of the Vancouver, New Westminster and District Trades and Labour Council from the judgment of Mr. Justice D. A. McDonald (LABOUR GAZETTE, February, 1939, p. 233) awarding $2,000 damages against them and granting an injunction against picketing the premises of the respondent, a private company owning and operating a theatre in suburban Vancouver in which the sole shareholders are R. E. W. Fairleigh, his wife and son. Although the unions were not named as defendants in the action, their trustees were sued in a representative capacity and the judgment directed that, pursuant to the Trade Unions Act of British Columbia, the funds of the unions are liable for damages and costs.

Differences between the union and the theatre owner arose out of the union's policy of requiring two projectionists to be on duty at the same time. On July 2, 1936, a Government regulation provided that from January 1, 1938, subject to the installation of certain safety devices, every moving-picture theatre equipped with two or more kinematographs could operate with one licensed projectionist instead of two as required previously. On September 27, 1937, the coming in force of the regulation was postponed until January 1, 1939, but it was cancelled on September 13, 1938.

However, anticipating the coming into force of the regulation, the theatre operators insisted on a three- or four-month instead of a two-year agreement with the union governing working conditions whereupon the union called a strike. When the strike had lasted two days the owners agreed to employ two projectionists in each theatre but the respondent, in an agreement made with the union on October 5, 1937, later inserted after the words, "The party of the first part agrees to employ only projectionists supplied by the party of the second part," the words "except and only when members of the family of the party of the first part are not available." Fairleigh expected his son to qualify for a projectionist's licence some five months later when he claimed the plan was for him and his son to be the two projectionists required by the agreement. The union, on the other hand, maintained that the understanding was that the respondent was to employ one union prejectionist who was not a member of the Fairleigh family. In March, 1938, when the son obtained his licence the union projectionist was given two weeks' notice.

From May 7 to June 21, when an interim injunction was obtained, the union picketed the theatre, the pickets bearing an inscription to the effect that the Hollywood Theatre did not employ members of the projectionists' union and distributing handbills, one lot of which set out the appellants' interpretation of the agreement. As the agreement stipulated that "this contract is not subject to any other understanding or agreement either written or verbal," the trial judge refused to admit evidence of any verbal agreement. On Saturday night, June 11, there was a mass demonstration of 60 or 70 pickets "with the result that in effect entrance to the theatre was obstructed." The respondent was placed on the "We do not patronize list" published by the union in its official organ *The Labour Statesman*.

The defendants maintained that "peaceful picketing" was allowed in British Columbia under the provincial Trade Unions Act enacted in 1902, section 3 of which (as the sections were renumbered in 1936) provides that:

> No such trade union or association shall be enjoined, nor shall any officer, member, agent, or servant of such trade union or association or any other person be enjoined, nor shall it or its funds or any such officer, member, agent, servant, or other person be made liable in damages for communicating to any workman, artisan, labourer, employee, or person, facts respecting employment or hiring by or with any employer, producer, or consumer or distributor of the products of labour or the purchase of such products, or for persuading or endeavouring to persuade by fair or reasonable argument, without unlawful threats, intimidation, or other unlawful acts, such last-named workman, artisan, labourer, employee, or person, at the expiration of any existing contract, not to renew the same with or to refuse to become the employee or customer of any such employer, producer, consumer, or distributor of the products of labour.

Section 4 reads:

> No such trade union or association, or its officer, member, agent, or servant, or other person, shall be enjoined or liable in damages, nor shall its funds be liable in damages for publishing information with regard to a strike or lockout, or proposed or expected strike or lockout, or other labour grievance or trouble, or for warning workmen, artisans, labourers, or employees or other persons against seeking, or

urging workmen, artisans, labourers, employees or other persons not to seek employment in the locality affected by such strike, lockout, labour grievance or trouble, or from purchasing, buying, or consuming products produced or distributed by the employer of labour party to such strike, lockout, labour grievance or trouble, during its continuance.

In the opinion of Mr. Justice O'Halloran of the Court of Appeal:

Two important questions appear—first, whether what was done—described by the appellants as 'peaceful picketing'—is permitted as such by the statute; and secondly, whether the appellants could exercise their statutory exemptions to enforce the union's interpretation of its contract with the respondents.

It is to be borne in mind that this is not an ordinary labour dispute in which the appellants seek to improve their conditions of employment by a strike accompanied by 'picketing' of the employer's premises. On the contrary, it involves interpretation of an existing contract to which the Projectionist Union is a party and by which it is bound in law. . .

Throughout the argument the appellants have adhered to the term 'peaceful picketing.' Before discussing the legality of what was done, it should be said at once that in my view at least the term 'peaceful picketing' has no place in the law of this Province. It is a negation in terms, for 'picketing' as conducted here cannot be described as peaceful. While violence did not occur, it was not due to lack of provocation; the display of organized labour strength and the atmosphere of labour power cowed active opposition and discouraged retaliatory or protective measures which would have led inevitably to violence. Without intimidation, obstruction and moral coercion it was useless for the purposes employed; with them it was provocative.

Mr. Justice O'Halloran pointed out that there was no other provincial statute in Canada similar to the British Columbia Trade Unions Act and there was therefore no guide to its interpretation available from other provinces. Reference was made to *Schuberg* v. *Local International Alliance Theatrical Stage Employees* (Labour Gazette, 1927, pp. 339, 473) which, being decided on an equal division of the British Columbia Court of Appeal, upheld the judgment of the lower Court awarding damages against the union but the *Schuberg* case was distinguished as one in which there was no contract with the employees, in which picketing occurred during a strike and "no organized mass demonstration occurred."

What took place in the *Schuberg* case was therefore of a much milder and less aggressive character, concerning terms and conditions of employment and by the people directly affected and with no relation to an existing contract; yet in the result the judgment against the union was upheld.

English decisions were considered of little assistance since the Trade Disputes Act, 1906, permits a person, in furtherance of a trade dispute, to attend at or near a place of business or residence for the purpose of peacefully obtaining or communicating information or peacefully persuading any person to work or abstain from working and prohibits a Court from entertaining an action against a union or its members for any tortious act alleged to have been committed by or on behalf of the union. The limitation on picketing imposed by the Trade Disputes and Trade Unions Act, 1927, was also referred to, in which the right granted by the 1906 statute was abrogated if the pickets "attend in such numbers or otherwise in such manner as to be calculated to intimidate any person . . .", intimidating being defined to mean "to cause in the mind of any person a reasonable apprehension of injury . . . or of violence or damage to any person or property."

The language in the English statute of 1906 was likened by the Court to that in Section 20 of the Clayton Act passed by the Congress of the United States in 1914 while the interpretation of the latter statute was considered similar to that adopted in effect in the English Act of 1927 which prohibits the "kind of picketing which occurred in the case before the British Columbia Court." Section 20 of the Clayton Act was considered to be "more explicit and wider than the British Columbia Trade Unions Act."

Accordingly, Mr. Justice O'Halloran dealt with certain American judgments under the Clayton Act:

Decisions of the United States Supreme Court cited hereafter carry greater effect because the local Projectionist Union is a member of the great United States Union and is governed to a large extent by the latter's policy; likewise the movie picture theatres are affected in their operation in so many ways by what is done in the United States. . . . In my view the two statutes bear such a close parallel in this relevant aspect that the cited decisions of the United States Supreme Court may be related logically to the comparable circumstances of 'picketing' now under review.

Section 20 of the Clayton Act reads, in part:

That no restraining order. . . shall be granted. . . in any case between an employer and employees. . . or between persons employed and persons seeking employment, involving, or growing out of a dispute concerning terms or conditions of employment unless. . . And no such restraining order or injunction shall prohibit any person or persons. . . from terminating any relation of employment, or from ceasing to perform any work or labour, or from recommending, advising, or persuading others by peaceful means so to do; or from attending at any place where any such person or persons may lawfully be, for the purpose of peacefully obtaining or communicating information, or from peacefully persuading any person to work or to abstain from working; or from ceasing to patronize or to employ any party to such dispute, or from recommending, advising, or persuading others by peaceful and lawful means so to do. . .

The American case referred to at length by Mr. Justice O'Halloran was *Truax v. Corrigan* decided in 1921 by the United States Supreme Court, Justices Holmes, Pitney and Brandeis dissenting. The decision reversed a judgment of the Supreme Court of Arizona upholding the constitutional validity of a state law limiting the use of the injunction in labour disputes which in language was almost identical with Section 20 of the Clayton Act but which the Arizona Court had interpreted to permit patrolling in front of the plaintiffs' business with banners announcing plaintiffs' unfairness, the use of epithets and verbal castigation of the employers and their business. Such conduct constituted, in the opinion of the United States Supreme Court as expressed by Chief Justice Taft, "moral coercion by illegal annoyance and obstruction. . . plainly a conspiracy" and as such was a deprivation of the plaintiffs' property without due process of law and therefore unconstitutional under the Fourteenth Amendment.*

Mr. Justice O'Halloran, in comparing the British Columbia Act with the Clayton Act stated:

> The term "picket" is not used in either statute. By no straining of the language may such terms as "communicating," "persuading," "recommending," "advising," "warning," and "urging" be extended to include marching backwards and forward in an organized manner in front of the employer's premises, let alone include the organized mass demonstration of June 11. Tactics of this character have little in common with "warning," "urging," "persuading," "recommending" and "advising;" instead such tactics imply an atmosphere of moral coercion, intimidation and obstruction. They are more in the nature of command than of persuasion, of implied threats than "warning and urging;" the more so when it is apparent to the onlooker that the proceedings are organized in a militant manner and are supervised by the powerful Trades and Labour Council representing all sections of organized labour in a large city. So organized and conducted the "picketing" in this case was tantamount to a public declaration that any one patronizing the respondent's theatre was an enemy to organized labour; it carried an implied challenge to members of the public to flout openly if they dared the power of organized labour and incur its animosity.

In view of what took place both here and in the *Truax* case, it is significant that neither the *Clayton Act* nor the British Columbia Act permits persons "attending at or near" the employer's premises to "persuade" members of the public not to patronize the employer. The words "attending at or near" do not appear at all in the British Columbia Act. They appear in the *Clayton Act*, but are restricted to "persuading" a person "to work or to abstain from working;" they do not apply therein to "persuading" members of the public to cease patronizing an employer. . . It is apparent that a number of persons "attending at or near," *viz.*, in front of a theatre for the purpose of organized and militant patrol and demonstration create quite a different effect than if it occurs at a place which is not "at or near" the theatre; also that an organized patrol and mass demonstration wherever it is held will have quite a different effect than if "communication" and "persuasion" is conducted quietly by individual persons without an outward display of organized force and massed action.

The question was considered whether the privileges of the British Columbia Act were extended to interference with other than parties to the dispute such as patrons of the theatre. The Court was of the opinion that the Act allowed immunity only to parties directly concerned, it being confined to "workmen, artisans, labourers, employees or *other persons*" which must, from the context, mean other persons of the same kind. It was considered that there is nothing in the Act to indicate that the right to "warn" or "urge" against patronizing an employer who is party to a labour dispute is to extend to the exercise of intimidation and moral coercion of his customers, actual or prospective. In this connection the Court referred to *Duplex Printing Press Company v. Deering*, a decision of the United States Supreme Court, 1921, in a case involving an attempt by the International Association of Machinists to organize a boycott of the customers of the company, the trucking companies that carried its presses and those who set them up. Mr. Justice Pitney, giving the majority opinion in that case, was quoted by Mr. Justice O'Halloran as defining the scope of the Clayton Act thus:

> "Full and fair effect wll be given to every word if the exceptional privilege be confined—as the natural meaning of the word confines it—to those who are proximately and substantially concerned as parties to an actual dispute respecting the terms or conditions of their own employment, past, present or prospective".

When counsel for the appellants argued that at common law they had the right to picket because their intention in doing so was to further their own trade union interests and that any injury to the respondent was incidental and not the primary purpose of the picketing he relied on the principle stated by the House of Lords in *Sorrell v. Smith* in 1925 that no wrong is committed if injury is incidental to the combination and not its primary purpose. The Court pointed, however, out that the latter was not a case of

* In 1932 Congress passed the Norris-Laguardia Act limiting the jurisdiction of the federal Courts to issue injunctions in labour disputes restraining any person from giving publicity to the existence of, or to the facts involved in any labour dispute, whether by advertising, speaking, patrolling, or by any other method not involving fraud or violence or from assembling peaceably to act or to organize to act in promotion of their interests in a labour dispute. Some 24 states now have legislation restricting the use of the injunction but the definition of "dispute" varies. In upholding the validity of the federal Act in 1923, the United States Supreme Court distinguished *Truax v. Corrigan* on the ground that the Arizona statute granted immunity from both civil and criminal process and did not merely restrict the use of the injunction.

picketing and under the English Trade Disputes Act an act done by a person in contemplation or furtherance of a trade dispute is not actionable only on the ground that it is an interference with the trade, business or employment of some other person and no action against a trade union for tort may be entertained by any Court. In Mr. Justice O'Halloran's opinion, if it were not for the fact that *Sorell v. Smith* related to trading and not employment the second principle laid down in that case—"if it could be applied to a labour controversy" in British Columbia—would apply to the facts in the case before him, viz.—"A combination of two or more persons wilfully to injure a man in his trade is unlawful and, if it results in damages to him is actionable". In the Court's opinion,

> the purpose of "picketing" in this case was to injure the respondent in its trade, so that it would be compelled by loss of revenue to accept the Union's interpretation of its contract or go out of business. The Union could not further its trade interest in this case without first so injuring the respondent's business that it would be compelled to do one or the other. The primary purpose was to injure the respondent's business. Injury to respondent's business was not an incidental, consequential or ancillary consideration; it was the primary and pivotal consideration. Furtherance of the Union's trade interest would be *effected* by the injury *caused* to respondent's business.

(Citing *Allied Amusements Ltd. v. Reaney*, Labour Gazette, 1937, p. 1281 and *Besler v. Matthews*, Labour Gazette, 1939, p. 235, both decisions of the Manitoba Court of Appeal, and the *Truax* and *Schuberg* cases).

The second question, whether, if what was done was within the Trade Unions Act exemptions, the appellants could take advantage of their statutory exemptions to enforce the union's interpretation of its contract was decided in the negative. In the Court's view, the immunities conferred upon a labour union by the statute do not apply during the existence of a contract to which the union is a party, and a controversy concerning the interpretation of such a contract is not a labour dispute within the meaning of the Trade Unions Act. If the employer committed a breach of the contract the union had its remedy in the Courts.

As to the argument of the appellants, that actions for tort are not covered by the Supreme Court Rule for the making of an order that certain persons shall for the purposes of an action represent and defend the action on behalf of themselves and all other persons constituting an unincorporated association, the Court held that the British Columbia Trade Unions Act itself makes liable in damages the trustees of a trade union in their representative capacity and the funds of a trade union are liable when the trustees are sued in such capacity. The case was distinguished from *Local Union 1562 United Mine Workers of America v. Williams & Rees* decided by the Supreme Court of Canada in 1919 (Labour Gazette, 1919, p. 1535) chiefly on the ground that the British Columbia Act did not apply in the latter case.

Reference was also made to the judgment of the House of Lords in *Taff Vale Railway Company v. Amalgamated Society of Railway Servants* (1901) in which it was held that a union registered under the English Trade Union Act, 1871, could be sued in its own name, and in which the opinion was expressed that an unregistered union could also be sued through its representatives. It is of interest to note that it was as a result of a judgment of a British Columbia Court, based upon the *Taff Vale* decision, awarding an injunction and damages against the Rossland Miners' Union in 1901 that the British Columbia Trade Unions Act of 1902 was enacted as the English Trade Disputes Act of 1906 was passed largely on account of the *Taff Vale* judgment.

It was held by Mr. Justice O'Halloran, however, that since the union and the Trades and Labour Council were not named as party defendants, judgment should not be entered against them as such but that the judgment of the trial judge should be varied so that their funds are liable for the damages and costs awarded against their trustees in their representative capacity.

Chief Justice Martin and Mr. Justice McQuarrie concurred in dismissing the appeal but the former only in part. The latter agreed with Mr. Justice O'Halloran in holding that the labour dispute was not within the protection of the Trade Unions Act of British Columbia. Chief Justice Martin, on the other hand, held that the dispute was one within the Trade Unions Act and the case should be decided under it. He distinguished, however, between the "mass demonstration" which he considered not protected by the statute and the distribution of handbills which he believed the union was entitled to make and should not be liable for its result. Further, he considered that the trial judge had no power to make the representative order. Chief Justice Martin stated that he intended to give a written judgment later, if time permitted, and that he adhered to his views as expressed in the *Schuberg* case in which he would have allowed the union's appeal. *Hollywood Theatres* v. *Tenney* (1940) 1 Dominion Law Reports 452.

Court of Appeal in British Columbia Holds There is no Lien for Wages Unless Act Complied With

A case involving the British Columbia Woodmen's Lien for Wages Act was decided by the British Columbia Court of Appeal on January 10 with Mr. Justice McQuarrie dissenting. The appeal was allowed and the judgment against the claim of the workmen affirmed.

The plaintiff had obtained judgment for $155.42 against the defendant employer who carried on logging operations and who owed his two workmen in wages $72.50 and $88.90 respectively. Under the Attachment of Debts Act, the plaintiff obtained an order attaching the money owed by the buyer of the logs to the defendant up to an amount sufficient to satisfy the judgment and costs of the attachment proceedings and the buyer paid into Court $158.83 pursuant to the attachment order.

In the meantime, statements of claim of lien for wages were filed on the defendant's logs and the question for the Court was to determine whether the sum paid into Court should be paid to the plaintiff or to the workmen.

The statute provides that a buyer of logs, before making payment for them, shall require the seller to furnish him with a statement of the wages paid and the wages due to all workmen employed in connection with the furnishing of the logs and the buyer is to retain for the workmen the sums due them. A buyer making payment for logs without requiring the production of such a statement is made personally liable, at the suit of any workman, for the amount of wages due.

In the case before the Court, the buyer did not fulfil the statutory obligation of obtaining a statement of the wages due and so, the Court held, the money paid to him did not become impressed with a trust in favour of the workmen. Their remedy lay in an action against the buyer of the logs. *Powell* v. *Norgren* (1940) 1 Western Weekly Reports, 272.

Quebec Court of King's Bench Allows Appeal of Workmen's Compensation Commission to Amend Claim

With Mr. Justice Hall dissenting the Montreal Division of the Court of King's Bench on November 30 allowed with costs the appeal of the Workmen's Compensation Commission against the judgment of Mr. Justice Duclos of the Superior Court who on May 4, 1938, refused a motion to amend the Statement of Claim by increasing the damages claimed in an action by the Commission against the party responsible for the accident.

The Workmen's Compensation Act provides that in the case of an accident to a workman in the course of his employment in such circumstances as entitle the workman or his dependants to an action against some person other than his employer, the workman or dependants may claim compensation from the Accident Fund or they may bring an action against the third party. If the workman or his dependants elect to claim compensation, the Commission becomes entitled, in place of the workman or dependants, to all the rights of the latter with respect to an action against the person responsible and may bring action against him.

In the case before the Court, the widow of the workman had elected on October 15, 1937, to claim compensation for an accident to her husband on September 16 and had been paid $9,012.98 from the Accident Fund. The Commission commenced action on February 28, 1938, claiming the exact sum which it had paid to the widow. When the defence was set up that the widow and therefore the Commission whose right depended on hers, had suffered no actual pecuniary loss as she had received in addition to the compensation, a larger sum from an insurance company, the Commission sought to amend the Statement of Claim to increase the claim of the widow and three children to $32,000, a sum sufficient to exceed the money she received from the Commission even after deduction of the insurance money, the right to deduct which was disputed.

The Civil Code allows one year within which an action such as this must be brought, but more than a year had elapsed between the time of the accident and November 28, 1938, when the amendment to the Statement of Claim was sought. The defendants contended that it changed the nature of the claim and really added a new claim which was therefore barred by lapse of time.

The majority of the Court held that it was not a new claim and allowed the amendment while expressing the opinion that in any case the Commission's right was limited to $9,012.98 the sum payable under the Act although section 9a added to the Act in 1936 allows the injured workman's dependants or

representatives within the time limit fixed by the Civil Code to claim "under common law from any person other than the employer . . . any additional sum" proportionate to the actual loss sustained. Mr. Justice Hall, dissenting, held the view that the right of action given by section 9a must be asserted before prescription is acquired, that the amendment introduced a new right of action, the time for bringing which had expired. Agreeing with the trial Judge he would have refused to allow the amendment and dismissed the appeal with costs. *Commission des Accidents du Travail de Québec v. Geo. J. Maybury, Inc.* (1940) 68 Rapports Judiciaires de Québec, Cour du Banc du Roi. (en appel) No. 1, p. 30.

Wages on Relief Works in Quebec Subject to Seizure for Debt

On January 18, Mr. Justice Forest of the Superior Court of Montreal held that the moneys payable to a man employed on relief works were liable to seizure for debt subject to the provision of the Code of Civil Procedure declaring the sum of $12 a week exempt from seizure. A creditor holding a judgment for $202.50 rent owing by a labourer employed by the City of Verdun on relief works was therefore allowed to attach the defendant's wages up to $1.80 a week, the claim to be renewed from month to month until the judgment is paid in full, the costs to be borne by the City.

The defendant was regularly employed in the construction of an auditorium from July 24, 1939, when the writ was issued. The City refused to turn over his money on the ground that it was not wages but a weekly maintenance allowance for him and his family. The Court pointed out that he was paid $13.80 a week at a 40-cent hourly rate under a contract of hire of services, which was more than the sum allowed the city's indigents and that he was free to accept or reject the terms of hiring. He was employed by the city and not by the federal and provincial governments whose financial assistance was given after the work was completed under agreements between them and the city to which agreements the workman was not a party.

The Court agreed with the plaintiff's argument that these special arrangements could not affect the claim, that the work was undertaken to relieve unemployment did not alter the contract between the workman and the city; neither was his position altered by the Unemployed Aid Act, 1931, which stipulates that every contract made by a municipality under the Act for the execution of relief works must provide that the workmen receive a fair wage.

From 1934 until 1939, when it was repealed, there was a provision in the Code of Civil Procedure exempting from seizure the wages of workmen and labourers employed at work undertaken to relieve unemployment with aid from the federal and provincial governments. This action was commenced on July 24, 1939, after the repeal of this clause, the effect of which is that the exemption applies now on relief works as in other cases only to $12 a week, the sum allowed a worker for support of his family. *Roy v. Ouimet and City of Verdun*, Cour Supérieure, Montreal, January 18, 1940.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME XL] APRIL, 1940 [NUMBER 4

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THERE was a slackening in industrial employment at the beginning of March, according to returns received by the Dominion Bureau of Statistics from 11,899 employers of labour, each with a minimum of fifteen employees, and representative of all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 1,109,443 persons, as compared with 1,118,003 in the preceding month. This decrease of 8,550 employees slightly lowered the unadjusted index number from 114·4 at February 1 to 113·5 at March 1, when it was higher than in any other March for which statistics are available. The base used in calculating these indexes is the 1926 average as 100.

During the period, 1929-1937, upon whose experience the factors of seasonal adjustment are based, a very slightly downward trend in employment was indicated at March 1; the reduction at the latest date rather exceeded this average decline, with the result that the seasonally-adjusted index fractionally declined, falling from 118·8 at the beginning of February to 118·3 at March 1, 1940. This was the highest adjusted figure for that date in the twenty winters for which statistics are available.

At March 1 in recent years of the record, the unadjusted index (1926=100) was as follows:—1940, 113·5; 1939, 106·5; 1938, 107·8; 1937, 102·8; 1936, 98·9; 1935, 96·4; 1934, 92·7; 1933, 76·9; 1932, 88·7; 1931, 100·2; 1930, 110·2; 1929, 111·4 and 1928, 102·6.

Unemployment in Trade Unions.—Reports were furnished to the Department of Labour at the beginning of March, 1940, by 2,000 local trade unions including 254,805 members, 29,804 of whom or a percentage of 11·7 were unemployed, in comparison with percentages of 11·3 at the beginning of February and 16·4 at the beginning of March, 1939.

Employment Office Reports.—Reports received from the offices of the Employment Service of Canada indicated declines during February, 1940, in the average placements in employment, as compared with those of the preceding month and also with those of February last year, the major losses under the first comparison taking place in services and farming and under the second in construction and maintenance and farming, these decreases being somewhat offset by an appreciable gain over January reported in construction and maintenance and over February, 1939, in services and in manufacturing. Vacancies in February, 1940, numbered 25,126, applications 64,735 and placements in regular and casual employment 23,713.

Prices.—In retail prices the cost per week of a list of staple foods, fuel and lighting, and rent entering into a family budget was $17.75 at the beginning of March as compared with $17.71 for February; $17.07 for March, 1939; $17.48 for March, 1938; $17.13 for March, 1937; $15.41 for June, 1933, the low point in recent years; $21.96 for March, 1930; $20.96 for March, 1922; and $26.92 for July, 1920, the post war peak. In wholesale prices the Dominion Bureau of Statistics weekly index number based upon prices in 1926 as 100 continued slightly upward in March as in the previous month. The figures are 83·2 for the week ended March 29, 82·8 for the week ended March 1, and 82·2 for that ended February 2. Comparative figures on a monthly basis are 82·8 for February the last month for which the figures are available: 73·2 for March, 1939; 83·1 for March, 1938; 85·4 for March, 1937; 63·5 for February, 1933, the low point in recent years; 95·6 for March, 1929; 98·3 for March, 1922; and 164·3 for May, 1920, the post war peak.

Business Statistics.—The latest statistics available reflecting industrial conditions in Canada are given in the table on page 316. The index of the physical volume of business was 131·2 for February as compared with 138·6 for January and 111·7 for February, 1939. Of the five principal groups, four were lower in February than in January and one, the construction group, advanced due to an increase in contracts awarded. Lower volume was indicated for mineral production, increases in copper and asbestos exports, in the shipments of silver, in imports of bauxite as well as in the production of coal being more than offset by declines in the exports of nickel and zinc as well as in the receipts of gold at the mint.

* Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† For the week ended March 29, 1940.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending March 30, 1940, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending March 23, February 24, and January 27, 1940; March 25, February 25, and January 28, 1939. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation. (9) Excluding gold.

In the manufacturing group the decline as compared with the previous month was due in large part to decreases indicated by the figures for manufacture of sugar, imports of rubber, the exports of wood pulp and lumber, the production of iron and steel and imports of crude petroleum. The output of electric power was slightly lower than in the previous month. In distribution decline was indicated by the figures for car loadings and external trade. All of the five principal groups were higher in February, 1940, than in February, 1939. Information available for March shows advance in wholesale prices and in the gross earnings of the Canadian National Railways as well as in the manufacture of sugar both as compared with the previous month and with March, 1939. The index of employment and the number of cars of revenue freight were both slightly lower than in February but higher than in March, 1939.

Strikes and Lockouts.—The number of strikes and lockouts during March was 11, involving 2,380 workers and causing a time loss of 19,276 man-working days, as compared with 14 disputes during February, involving 3,161 workers and causing 14,687 days' time loss. The increase in time loss during March was due chiefly to two strikes, one involving 700 coal miners at Mountain Park, Alberta, and one involving upward of 600 cotton factory workers at Milltown, N.B. In February most of the time loss had been caused by strikes of coal handlers at Toronto, Ont., and gold miners at Pioneer Mines, B.C. In March, 1939, there were seven disputes, involving 1,598 workers and causing time loss of 9,982 working days. Only one of these disputes caused considerable time loss, that of rubber factory workers at Kitchener, Ont., which involved 1,000 workers and a loss of 8,000 days. Of the eleven disputes recorded for March, 1940, seven were recorded s terminated during the month, two resulting in favour of the employers and one in favour of the workers involved, one being partially successful, two resulting in compromise settlements and the result of one being recorded as indefinite. Four disputes, involving approximately 1,500 workers, were recorded as unterminated at the end of March. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the past month unanimous reports were submitted to the Minister of Labour by Boards of Conciliation and Investigation in the case of two disputes between (1) the Niagara, St. Catharines and Toronto Railway and its motormen, polemen, conductors and brakemen engaged in freight service and (2) the Dominion Coal Company, Limited, and its coal miners.

Six applications for the establishment of boards were received in the Department and three boards were established.

Details of proceedings under the Industrial Disputes Investigation Act and the texts of the boards' reports will be found in the section commencing on page 320.

Statistics of relief recipients for February

The grand total of all classes of persons on urban and agricultural direct relief across Canada in February of this year was 745,000, according to figures released by the Honourable Norman A. McLarty, Minister of Labour. These figures are the preliminary results from the registration of all direct relief cases, carried out for the Department of Labour by the provinces and municipalities in February. The grand total for February, 1940, compared with the same month of 1939, showed a decrease of 27 per cent, while compared with February, 1938, the Dominion figure was down by 29 per cent: both urban and agricultural relief showed decreases from a year ago. In February the total number of relief recipients invariably shows an increase over the previous month, and into February this year this increase was about 37,000 persons, compared with 42,000 in 1939.

Unemployed but fully employable persons on relief in February this year numbered 169,000, an increase of 3·8 per cent from the revised January total. The figure for February this year showed a decrease of 11·3 per cent from February a year ago, and a decrease of 3·4 per cent from February, 1938.

A total of 636,000 persons were receiving non-agricultural relief in February, an increase of 4 per cent from the corrected figures for the previous month: February, 1939, had shown a 4·4 per cent increase over January. This category includes all totally unemployable, partially employable and fully employable persons, together with all dependents of family heads. This aggregate showed a decrease of 9 per cent from the figure for February, 1939, and a decrease of 3 per cent from the figure for February two years ago.

The Dominion total on agricultural relief continued to show a major decline from the year before, following improved crop conditions in 1939 in the Prairie Provinces. A total of 22,000 farmers who, together with their dependents, accounted for a farm population of 109,000, were reported as receiving agricultural relief for subsistence in February. The Dominion total on agricultural relief in February increased by 14 per cent from the revised

January figure, but was 66 per cent lower than in February, 1939, and 72 per cent less than in February, 1938. Figures for February for Saskatchewan alone showed decreases of 74 per cent and 80 per cent from February, 1939, and from February, 1938, respectively: the Saskatchewan total of persons on agricultural relief represented 63·3 per cent of the Dominion total in February this year.

Registration in Canada for Industrial War Work

As referred to in the Labour Gazette for March, 1940, (page 194), the offices of the Employment Service of Canada have been conducting in recent months a civilian registration of skilled and semi-skilled workers whose training and experience would seem to qualify them for employment in industries engaged in the production of war materials. This registration has been proceeding in all provinces.

To the end of March about 27,000 skilled and semi-skilled workers have been registered, of whom 1,200 are women; 4,700 of the total were employed at the time of registration, while of the 22,300 reported as unemployed when registering, 20,750 were stated to be fully employable and 1,550 to be partially employable.

The registration is still continuing, but already some persons who have filed these special applications with the Employment Offices have been placed in jobs.

Intensive plant organization in first aid recommended by textile safety group

In view of the increase in the trend of minor injuries with its apparent resultant increase in infection cases—reports the March 29 issue of the *Canadian Textile Journal*—the Textile Group Safety Association, under the chairmanship of R. H. Kayser, Belding-Corticelli Ltd., Montreal, Quebec, and organized by the Quebec Association for the Prevention of Industrial Accidents, recommended at a meeting held on March 18, that all textile plants employing one hundred men or more give consideration to the centralization of first aid treatment, either by departments or otherwise and that such treatment be in the care of one trained person so delegated for this purpose.

"During a general discussion on the question of infections it was brought out that management should recognize the susceptibility of individuals to infection, and to see that proper first aid treatment was given and that such treatment should be closely followed up. A curb should be made on all persons in the habit of treating themselves because of danger of mistreatment."

Seventh report of Canadian Railway Board of Adjustment No. 1

The Dominion Department of Labour has recently published Bulletin No. 14 in its Industrial Relations Series, being the seventh report of the proceedings of the Canadian Railway Board of Adjustment No. 1 for the period October 1, 1936, to September 30, 1939.

The Canadian Railway Board of Adjustment No. 1 was founded originally under an Agreement dated August 7, 1918, between the Railways of Canada and six Organizations representing employees in train, telegraph and maintenance of way service on these railways, for the purpose of avoiding any disputes or misunderstandings that might interfere with the fullest possible measure of efficiency in transportation service during the War.

This was supplemented by a Post-War Agreement continuing the Board's functions, entered into on April 15, 1921. Under this new compact between the Railway Association of Canada (representing Canadian Railroads) and the six labour organizations, the Board now operates.

The six railway labour organizations represented with the Railroads in this successful arbitration procedure are:

The Brotherhood of Locomotive Engineers.
The Brotherhood of Locomotive Firemen and Enginemen.
The Order of Railway Conductors.
The Brotherhood of Railroad Trainmen.
The Order of Railroad Telegraphers, and
The United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

During the period covered by the report the Board held ten sessions, sitting seventeen days. Decisions were rendered in twenty-three cases and eight cases were referred back to the parties, making a total of thirty-one hearings.

Copies of this or any Bulletin in the series still in print may be obtained post free on request to the Department of Labour, Ottawa.

Wartime industrial relations discussed at Queen's University Conference

Wartime problems of industrial relations featured the agenda of the Industrial Relations Conference held under the auspices of the Industrial Relations Section, School of Commerce and Administration, Queen's University, on April 10-12.

The subject of the opening session, (presided over by Mr. E. R. Complin, Industrial Relations Manager, Canadian Industries

Limited), was "Machinery for the Prevention and Settlement of Industrial Disputes", the leading address being given by Mr. G. V. V. Nicholls, Industrial Relations Department, Canadian Manufacturers Association. Informal discussion on this subject was resumed at the next session, the chairman being Mr. J. H. Brace, vice-president of the Bell Telephone Company of Canada. At this session also, Professor J. C. Cameron, head of the Industrial Relations Section, Queen's University, presented a report of the work of this division.

"Training Personnel for Industrial Occupations" was the next topic on the agenda and the lead-off address was given by Mr. H. B. Chase, Director of Labour Relations, War Supply Board, the chairman being Mr. H. Taylor, chief of Industrial Service Department, Canadian National Carbon Company Limited.

At the dinner session on April 11, the feature address was given by Dr. W. A. Mackintosh, Director, School of Commerce and Administration, Queen's University, on the subject "Wage Policy During the War", the chairman being Mr. J. F. Marsh, Deputy Minister of Labour, Ontario. The informal discussion was continued at the final session, presided over by Dr. J. Douglas Brown, Director, Industrial Relations Section, Princeton University.

Representing the Dominion Department of Labour at the Conference was Mr. Gerald H. Brown, Assistant Deputy Minister. Others participating in the discussions were: Dr. R. C. Wallace, Principal of Queen's University; Mr. Tom Moore, President, Trades and Labour Congress of Canada; Mr. A. R. Mosher, President, All-Canadian Congress of Labour; Mr. M. M. MacLean, General Secretary, Canadian Brotherhood of Railway Employees; Mr. A. C. Charpentier, President, Confederation of Catholic Workers of Canada.

Wartime factory hours of women and young workers in Great Britain

The Home Office (Great Britain) has recently issued a report dealing with the hours of employment of women and young workers in factories during the first five months of the war.

This report states that despite wartime demands, the hours and conditions of employment of women and young persons are being kept under supervision and control, and further that it is the policy of the Government, while allowing relaxations where necessary, not to authorize hours which are found in the light of experience and scientific investigation to be detrimental to health and efficient production.

A comparison is made between the conditions of the workers in the war of 1914-18 and those of to-day. In 1914 the maximum working week for women and young persons was 60 hours, except in textile factories where it was 55½ hours, and it was quite usual for these maxima to be worked.

Emergency orders on the outbreak of war in 1914 made it possible for 70 or more hours a week to be worked. It soon became apparent, however, that production actually suffered from long hours and continuous overtime, and a Committee was appointed "to consider and advise on questions of industrial fatigue, hours of labour, and other matters affecting the personal health and physical efficiency of workers in munitions factories and workshops." As a result of the findings of this Committee hours were considerably lessened. (Labour Gazette, January, 1940, pages 28-30.)

The reduction of hours continued during the intervening years, accomplished in most cases by collective agreement between employers and workers, and when the Factories Act, 1937, came into operation on July 1, 1938, (Labour Gazette, October, 1937, page 1059) the normal maximum working week for women and young persons was fixed at 48 hours.

At the outbreak of war in September, 1939, relaxations of factory hours were again made to allow women and young persons to work up to 60 hours a week. But this was a provisional measure.

Nearly 3,000 orders have been made granting permission for the extension of working hours, but the maximum in almost every case has been reduced to 57 hours, and some firms when applying for a renewal of the original order have proposed a reduction to 54 hours or less. Some have not asked for a renewal of the order.

Sixty-two applications for orders allowing the employment of women or young persons at night have been refused (at any rate for the time being) and in no case has authority for the night employment of girls under 18 or boys under 16 been given.

During the early weeks of the war many firms, particularly in the engineering industry, and firms engaged in making black-out material urgently required, were allowed to employ young workers up to 47 or 48 hours a week (i.e. to revert to the hours in vogue before the passing of the Factories Act of 1937).

During the short period for which the concessions were granted such measures were taken by many employers that by the time their orders expired, they found it unnecessary to employ their young workers beyond the statutory maximum of 44 hours. In other cases renewal orders were refused.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

SIX applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour recently, as follows:—

(1) From employees of Mr. James Harris, the Burke Electric Company and Mr. O. King, electrical contractors of Kingston, Ontario. The dispute related to the employees' demand for increased wages. The application did not meet the requirements of the statute in so far as concerned the number of employees affected by the dispute, none of the contractors employing as many as 10 men, and no board was established. The case was dealt with, however, by the conciliation service of the Department (see the reference on page 331).

(2) From various steamship companies represented by the Shipping Federation of Canada, Inc. The dispute related to the request of their longshoremen, members of Local 375, International Longshoremen's Association, for increased wages, a reduction in the working hours per day, and certain changes in working conditions. Approximately 2,600 employees were stated to be directly affected. A Board of Conciliation and Investigation was established by the Minister of Labour on April 2 and members thereof were appointed as follows: on the companies' recommendation, Mr. F. Curzon Dobell, of Montreal; on the employees' recommendation, Mr. Raoul Trepanier, of Montreal. Messrs. Dobell and Trepanier were unable to agree upon a person for appointment as third member and chairman of the board, and in the absence of a joint recommendation the Minister of Labour appointed Honourable Mr. Justice John G. Gillanders, of the Supreme Court of Ontario, to the chairmanship.

(3) From the Dominion Steel and Coal Corporation, Ltd., and the employees in its Sydney steel plant being members of Lodge 1064 of the Amalgamated Association of Iron, Steel and Tin Workers of North America, Steel Workers' Organizing Committee. The dispute arose in connection with the employees' request for increased wages. A Board of Conciliation and Investigation was established by the Minister of Labour on March 26, composed as follows: Honourable Mr. Justice Lucien Cannon, of the Quebec Superior Court, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other board members, Dr. Thomas O'Reilley Boyle, of Cheticamp, N.S., nominated by the men, and Major John S. Roper, K.C., of Halifax, nominated by the company.

(4) From employees of the McGillivray Creek Coal & Coke Company, Ltd., and the International Coal and Coke Company, Ltd., being members of Coleman Local Union No. 2633, United Mine Workers of America. Approximately 800 employees are estimated to be directly affected by the dispute, the majority of whom are, it is claimed in the application, members of the union above named. The cause of the dispute is stated to be the refusal of the company to recognize District 18, United Mine Workers of America, as the sole bargaining agency for all their employees or to negotiate on the basis of the union agreement in effect with the Western Canada Bituminous Coal Operators' Association.

(5) From machinists, fitters, specialists and machinists' helpers in the employ of the Burrard Drydock Company, Ltd., at Vancouver, B.C., being members of Vancouver Lodge No. 692, International Association of Machinists. Fifty employees are stated to be directly affected by the dispute, which relates to their request for increased wages.

(6) From pattern makers in the employ of the Canadian General Electric Company, at Toronto, Ont., being members of the Toronto association of the Pattern Makers League of North America. The request of the employees, 11 in number, for an increase of 10 cents an hour in their wage rate is stated to be the cause of the dispute.

A Board of Conciliation and Investigation was established by the Minister of Labour on March 23 to deal with a dispute between Canada Veneers Limited and its employees being members of Local 2533, Veneer Mill Workers, United Brotherhood of Carpenters and Joiners of America (Labour Gazette, March, 1940, page 198). The personnel of the board is as follows: Mr. T. Louis McGloan, of Saint John, N.B., chairman, appointed by the Minister on the joint recommendation of the other board members, Messrs. L. M. Ritchie, and James A. Whitebone, also of Saint John, nominees of the company and employees, respectively.

The Department was advised on April 5 that a satisfactory arrangement had been reached between Paterson Steamships Limited and its employees and that the employees accordingly desired to withdraw the application for a board which they had submitted early in February (Labour Gazette, February, 1940, page 101).

Report of Board in Dispute between the Dominion Coal Company, Limited, and its Employees

The Board of Conciliation and Investigation established on January 22 to deal with a wages dispute between the Dominion Coal Company, Limited, and its employees, members of District 26, United Mine Workers of America, presented a unanimous report to the Minister of Labour on March 23, the text of which is given below.

The company has indicated its intention of accepting the recommendations of the board and of making them effective immediately upon acceptance thereof by the employees concerned. The Department has been advised that a meeting of the District Board of the union has been summoned to consider the board's recommendations.

The personnel of the board was as follows: Honourable Mr. Justice C. P. McTague, of the Supreme Court of Ontario, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other board members, Professor Frank R. Scott, of the Faculty of Law, McGill University, Montreal, nominated by the employees, and Mr. Ralph P. Bell, of Halifax, nominated by the company.

Text of Report of Board

In the matter of the Industrial Disputes Investigation Act and of a dispute between The Dominion Coal Company, Limited, Employer; and its employees being members of District No. 26 United Mine Workers of America.

To the Honourable Norman A. McLarty, K.C.,
Minister of Labour,
Ottawa, Ont.

The Board of Conciliation appointed by you and composed of the Honourable Mr. Justice C. P. McTague, Chairman, Mr. Ralph P. Bell, nominee of the employer, and Professor F. R. Scott, nominee of the employees, begs leave to report to you as follows:—

The Board commenced its sittings in Halifax on Saturday, February 17, and, with the exception of Sunday, February 18, and Sunday, February 25, has sat continuously up to and including the fourth day of March. Inspection of typical collieries of the Company at New Waterford and Glace Bay was undertaken on February 20 and public hearings were held in Glace Bay, Sydney, New Waterford and Springhill. Long negotiations in an attempt to secure agreement have been held in Halifax since the 28th day of February.

The last wage contract between the Dominion Coal Company and the Cumberland Railway and Coal Company and their respective employees expired on the 31st day of January, 1939. While the formal reference to us from the Department is limited to the Dominion Coal Company and its employees, the Cumberland Company has submitted that the reference should be extended to include it so that where the word "Company" is used in this report it should be taken to include both Companies. The employees gave notice pursuant to the contract for revision and negotiations have been carried on without success ever since on the understanding that the former contract should be deemed to continue in force during the negotiations. Prior to the outbreak of the War on the 3rd day of September, 1939, the employees presented a great number of requests for revision, but since that date have put their case on two main propositions:

(1) That since the War there has been a rise in the cost of living, that the trend is upward and wages should be correspondingly increased;
(2) That the wages of the datal men as contrasted with contract miners should be raised to a higher standard.

The Company on its part contests the soundness of the first proposition in principle and further takes the position that it is unable on account of its present financial position and unpredictable future prospects in these abnormal and uncertain times to meet the men's request without jeopardizing the security of the industry including its wage force and perhaps its very existence.

The present basic datal wage rate is $3.71 per day. A study of 1939 operations reveals that the average number of shifts worked was approximately 210—approximately $780 for the year. A comparison of basic rates in the mining industry of Nova Scotia shows that the rate is the highest paid in the province. Furthermore, it compares more favourably with the rate for common labour in other types of industries as well. On the other hand, the rate is low by comparison with that paid in the coal mines of Alberta. However, in spite

of comparative analyses of this type, we take the position that it is in the national interest that standards should be raised wherever it can be shown that industry can afford to do so out of profits. In other words, Labour is entitled to a fair living wage on advancing standards consistent with the ability of the particular industry to pay.

This Company, with its related Companies in the Dosco group, provides the means of livelihood of from one-fifth to one-quarter of the population of the Province of Nova Scotia, and its continued existence is a matter of vital provincial interest. From that it follows that its security is a matter of vital national interest as well, a principle long ago and still recognized by payment of subventions from the National Treasury to help overcome the very high transportation costs of its product to markets in the Provinces of Quebec and Ontario where it must compete with American coal at much lower transportation cost. Its cost at the mine is necessarily very high on account of the great distance from the coal face to the mine outlet. The major part of its coal is mined beneath the sea. As years go on its costs must mount as the operation moves out to sea as long as present methods are employed. It is and will continue to be handicapped in competing with American bituminous coal mined at relatively shallow depths largely by mechanical means. At present it faces additional, heavy transportation cost due to the commandeering of boats for War purposes. Ordinarily in normal times it can secure boats for the movement of its coal up the St. Lawrence River to Montreal at much less cost than by rail transportation. To-day in time of War it is problematical if it can secure enough charters to take care of normal requirements. Furthermore its cost almost inevitably will be considerably higher and all charters will be subject to suspension or cancellation in War emergencies. As against higher cost of transportation it is possible that it will be able to obtain a higher price for its coal, but it is very doubtful if the increase will offset additional transportation cost of 60 per cent of its product.

We are of the opinion, therefore, that it would be a most unwise proceeding on our part in the interest of the miners themselves to base any present increase of wages on the Company's future prospects. Past history of normal times is a poor guide to future prospects in abnormal times.

That brings us to consideration of the Company's present financial position. We were provided with all the information required for our purpose and we find that, after due and necessary allowances for the interest, depreciation, renewals and betterments, reserve for contingencies, dividends on preferred shares and reserve for Income Tax, the actual net profit for the year 1939 was roughly $190,000. We were aware that the miners are suspicious of balance sheets and profit and loss figures, a suspicion based perhaps on many former negotiations with predecessor companies. Having that in mind we were careful to go back of the usual pro forma statements to ascertain if there were any unusual expenditures or setting aside of reserves which would prejudice the miners' reasonable rights in respect of wages. Our investigation satisfied us that the Company is well managed, that its expenditure and reserve policy is reasonable and primarily in the direction of assuring continued operation of the industry as a whole and therefore continued employment to the men.

We therefore reached the conclusion that if any relief could be extended in the direction of wage increases it must be on the principle of sharing in results and that those entitled in the present circumstances are the datal men in the lower brackets. On the main issue, then, we make the following recommendations, which will represent a cost of approximately $150,000 to the Company, largely at the expense of the common shareholders who have had no dividends since 1923:

(1) That the wage rates and working conditions provided in the last agreement which expired the 31st day of January, 1939, remain in effect till the 31st day of January, 1941, with the following changes:

(*a*) That datal rates should be increased as follows:

Present Rate	New Rate
2·68	2·80
2·99	3·10
3·61	3·79
3·71	3·90
3·74	3·92
3·85	4·00
3·88	4·02
3·89	4·02
3·93	4·02
3·95	4·05
3·98	4·05
3·99	4·05
4·00	4·05
4·02	4·05

(*b*) That contract rates for hand-pick miners working on the Long Wall Face in No. 2 Colliery at Springhill be advanced from 55·7 cents to 62 cents.

(*c*) That between December 1 and December 15, 1940, the parties

agree on a tribunal to which they would refer the matter of a new contract if unable to negotiate one themselves. That the parties should commence negotiations themselves on a new contract on January 5, 1941, and, if unable to agree, refer the matter to the tribunal already named on January 15, 1941, for final disposition if possible before the first day of February, 1941.

During the hearings before your Board various subsidiary matters were brought up which should be discussed separately and on which separate recommendations will be made.

The Company raised the question as to shippers and trimmers at Sydney Pier being requested to work on Sundays and statutory holidays for the purpose of bunkering ships for convoy. There seemed to be a good deal of confusion of thought on this matter. We recommend that the shippers and trimmers at the shipping piers in Sydney when requested to bunker ships for convoy on Sundays or statutory holidays should receive their usual contract rates, plus an extra allowance of $6 per Sunday or holiday for each man actually engaged in the bunkering of a ship or ships on these days.

It appears that in the wage schedule of the last contract certain employees of the Sydney and Louisburg Railway and the Seabord Power Corporation were included for some reason unknown to us. These companies were not included in the reference to us nor did they submit to our jurisdiction as did the Cumberland Company. Strictly speaking we are not in position to make a recommendation which by subsequent adoption of this report can be considered binding. Since, however, the matter appears to have caused considerable controversy, we suggest that employees of the two Companies in question should be deemed to be outside the scope of the contract and negotiations should be carried on with these Companies and not with Dominion Coal Company. In this connection we have this observation to make, namely, that these men should be entitled to standard rates of wages paid to men doing similar work in equivalent industries in the province. We also wish to mention our opinion that, in the absence of mutual agreement, the principle of check-off union dues does not apply to these Companies as it does to a mining company like Dominion Coal Company.

Another matter brought to our attention was a very considerable sum of money owed by employees of Dominion Coal Company to the Company for arrears of rent and coal. It would appear to us that a considerable part of this debt was probably incurred at a time when the industry was operating on a restricted basis due to economic conditions over which neither the men nor the Company had any control. While it is conceivable that there might be some dissatisfaction on the part of the man who has paid up, nevertheless we are of the opinion that it will be in the interests of the industry as a whole and probably a relief to the lower datal class if this debt were completely written off as of February 1, 1940, and we so recommend.

Finally, if our report is accepted in principle by both sides we further recommend that the suggested increases in rates to datals and to the hand-pick miners at No. 2 Colliery Springhill be made retroactive to February 1, 1940, and that any accruals due such men on this principle be paid them in cash on the first pay-day following adoption of this report.

When attempting to secure agreement between the parties as contemplated by Section 25 of the Act, we found this practically impossible because of a custom which requires Union executives to submit wage contracts to referendum before they become effective. Such procedure is no longer effective in the same Union in the United States. It definitely imposes an almost unbearable burden on the Executive. The referendum frequently is not a genuine expression on the merits of the contract but tends to be one of want of confidence in the union executives who have negotiated it. We do not put our views in the form of any recommendation but merely throw out the suggestion that it is in the interests of the Union as a whole that these matters should be considered and within the Union itself rectified in the interests of efficiency and strength.

Before parting with the matter may we say that we have tried to find a formula in the interests of the worker consistent with the security of the industry and the national interest—namely, the right to share in results. That is the basic reason why we have suggested that there should be a reconsideration at the end of the year when the present unpredictables will have been translated into known facts and results. We are very grateful to the representatives of both the Company and the Union for the dignified and courteous manner in which the case was presented. Whenever we needed assistance it was willingly accorded by both sides.

All of which is respectfuly submitted this 21st day of March, 1940.

Report of Board in Dispute between the Niagara, St. Catharines and Toronto Railway and its Motormen, Polemen, Conductors and Brakemen Engaged in Freight Service

A unanimous report was received in the Department of Labour on March 12 from the Board of Conciliation and Investigation established to deal with a dispute between the Niagara, St. Catharines and Toronto Railway and its motormen, polemen, conductors and brakemen engaged in freight service, members of the Brotherhood of Locomotive Engineers and the Brotherhood of Railroad Trainmen, respectively.

The board recommended the establishment of a basic eight-hour day, with time and a half for overtime, and an increase in wage rates of five cents per hour. These recommendations have been accepted by the parties concerned as a settlement of the dispute, an agreement being signed effective April 1, 1940.

The personnel of the board was as follows: Honourable Mr. Justice C. P. McTague, of the Supreme Court of Ontario, chairman, appointed on the joint recommendation of the other board members, Mr. Arthur W. Roebuck, K.C., of Toronto, nominated by the employees, and Mr. C. V. Langs, K.C., of Hamilton, Ont., nominated by the company.

Text of Report of Board

In the matter of the Industrial Disputes Investigation Act and of a dispute between The Niagara, St. Catharines and Toronto Railway, Employer; and its motormen, polemen, conductors and brakemen, engaged in freight service, members of the Brotherhood of Locomotive Engineers and the Brotherhood of Railroad Trainmen, respectively, Employees.

To the Honourable Minister of Labour,
Ottawa, Ontario.

Sir,—The Board of Conciliation and Investigation appointed by you in the above matter now begs to report that the Board is composed of the Honourable Mr. Justice C. P. McTague of the Court of Appeal for the Province of Ontario, appointed on the joint recommendation of the other members, and Arthur W. Roebuck, Esq., K.C., of Toronto, nominated by the employees, and C. V. Langs, Esq., K.C., of Hamilton, nominated by the employer.

At the hearings the employees were represented by:—

Mr. J. B. Ward, of the Brotherhood of Locomotive Engineers.
Mr. J. J. Hendricks, of the Brotherhood of Railroad Trainmen.
Mr. Thomas J. Mulligan, an employee of the said railway, and Chairman of the local union of the Brotherhood of Locomotive Engineers.
Mr. J. Boles, an employee of the said railway, and Chairman of the local union of the Brotherhood of Railroad Trainmen.

The employer was represented by:—

Mr. E. B. Walker, General Superintendent.
Mr. J. R. Ephringham, Superintendent of the Niagara, St. Catharines and Toronto Railway.

The Board met at Osgoode Hall, Toronto, for public hearings on the following days, that is to say:—December 19, December 20, December 21, 1939—and later for conference between the parties at Osgoode Hall on December 29, 1939. On February 13, 1940, the Board met to consider its recommendations.

An agreement covering wages and working conditions has been in existence between the parties since the year 1932, and the application for the establishment of a Board of Conciliation and Investigation was made by the employees because of their desire for improvement in wages, hours and working conditions, so that a general revision of the agreement became necessary.

It is fortunately unnecessary for the Board to report with respect to all of the numerous questions considered, for the parties, with the assistance of the Board, have come to an agreement upon all but two of the questions outstanding, and they have reduced the terms of their various agreements to writing.

Attached to this report of your Board is a draft memorandum of agreement in which Article 1, with respect to rates of pay, and Article 2, with respect to basic pay and overtime, are left blank. These are the two matters upon which the parties are unable to agree. All other articles in the attached draft have been duly considered by the parties, discussed and debated at length, and with some assistance from the Board have been finally accepted as the terms of a proposed agreement between the parties to the dispute so soon as Articles 1 and 2 can also be settled.

While the many points agreed upon involved concessions by both sides, there are some notable gains made by the employees, such, for instance, as the two-hour guarantee in Article 7, and the eight-hour guarantee for each calendar working day in every month for regularly assigned employees to be found in Article 8. The advantages are, of course, reciprocal, and as these terms are already

agreed upon, subject to the settlement of Articles 1 and 2, further discussion of their provisions in this report is unnecessary.

Unfortunately, the points left undecided are questions of great difficulty. The employees contend that the rates of pay per hour should be increased for motormen and conductors from 55 cents per hour to 70 cents per hour, and for polemen and brakemen from 48 cents per hour to 60 cents per hour, and that a basic day of eight hours should be established, with payment of time and one-half for all time in excess of eight hours per day, in lieu of the basic day of nine and one-half hours presently in effect.

The employer gave evidence with respect to motormen's wages (other classifications in proportion) on what he contended were the comparable electric railroads, as follows:—

	Cents
Lake Erie and Northern	55
London and Port Stanley	55
Montreal and Southern Counties	55
Oshawa Railway	60

On the other hand, the employees submitted evidence of wage scales, as follows:—

	Cents
Canadian National Atlantic and Central Regions	84
Canadian Pacific, the entire system	84
T. & N. O. (Nipissing Central)	84
Montreal Harbour Board (owned by the Federal Government)	84
B. C. Electric Railway	72
Canadian Pacific (American rate, including the Michigan Central in Canada)	95

The employees of the electric railways referred to by the employees work an eight-hour day with time and a half for overtime.

In the course of the discussions between the Board and the parties, the employer offered an increase in wages from the present rate of 55 cents per hour for motormen and conductors, and 48 cents an hour for polemen, trolley men and brakemen, to the Oshawa rate of 60 cents per hour and 53 cents per hour, respectively, together with a reduction in the basic day from nine and a half hours as presently in effect to nine hours. The employees reduced their demand from 70 cents per hour and 60 cents per hour, respectively, to 66 cents per hour and 57 cents per hour, respectively, with a basic eight-hour day, and time and a half for overtime. Neither party would make further concessions.

It is necessary therefore that the Board make its report on these two questions of rates of pay and basic day and overtime, and its recommendations must necessarily be a compromise, involving concessions by both sides, and the partial sacrifice of views strongly held and vigorously pressed.

The Board is unanimously of opinion that the employer should concede the eight-hour day with time and a half thereafter and that in consideration for this concession and the other benefits to be derived by the employees from the other articles of the agreement that the employees should accept the Oshawa rates of 60 cents per hour and 53 cents per hour for the respective classifications.

The Board is of opinion generally that the time has arrived for the establishment of the basic eight-hour day on railroad operations such as that of the Niagara, St. Catharines and Toronto Railway, and no adequate reason was advanced in the discussion to justify a further deferring of its adoption.

The Board recognizes the importance of the concession by the employer if its recommendation of an eight-hour basic day is accepted. Financially, at the proposed 60 cents rate, it means an added 30 cents per day to the motormen and conductors who work nine hours, due to the extra half time for the period between the eighth and ninth hours. The adoption of the eight-hour day in the proposed agreement will bring conditions of labour on the Niagara, St. Catharines and Toronto Railroad into line with what the Board believes to be modern conditions.

In view of its recommendation of the eight-hour basic day, your Board finds it impossible to be unanimous in any suggested recommendation that the Company advance wages beyond the rates paid on the electric road referred to by the employer as comparable and which carry on their operations in adjacent Ontario territory. The Board is therefore of opinion that the men should accept the 5 cent per hour increase offered, and recommend accordingly.

In conclusion, the Board desires to thank the representatives both of the employees and of the employer for the ability and fairness with which they have presented their respective cases, for the mutual concessions they have already made, and for their unfailing courtesy in supplying information. The Board accords to each and all engaged in the prosecution of this dispute, its highest commendation.

All of which is respectfully submitted.

Dated at Toronto this 26th day of February, 1940.

NIAGARA, ST. CATHARINES AND TORONTO RAILWAY

SCHEDULE OF RATES OF PAY AND RULES GOVERNING SERVICE OF MOTORMEN, POLEMEN, CONDUCTORS AND BRAKEMEN ENGAGED IN FREIGHT SERVICE

EFFECTIVE

Article 1

RATES OF PAY

Article 2

BASIC DAY AND OVERTIME

Article 3

STARTING TIME

Regularly assigned employees shall have a fixed starting time which shall not be changed without eight (8) hours' advance notice.

Article 4

EXTRA SERVICE

Regularly assigned employees performing extra service not continuous with, before or after the regular work period will be paid a minimum of one (1) hour and twenty (20) minutes at time and one-half for one (1) hour and twenty (20) minutes' work or less, and if held in excess of one (1) hour and twenty (20) minutes, time and one-half will be allowed on the minute basis. However, employees may if conditions justify be compensated as if on continuous duty.

Article 5

EXTRA ASSIGNMENTS

Except as provided in Articles 4 and 6, employees performing service on extra assignments will be allowed a minimum of eight (8) hours at pro rata rates.

Article 6

SUNDAY AND HOLIDAY SERVICE

Employees performing service on Sundays and/or the following holidays, viz:

New Year's Day,
Good Friday,
Empire Day, May 24,
Dominion Day,
Civic Holiday,
Labour Day,
Thanksgiving Day,
Christmas Day,

(provided that when any of these days fall on Sunday the day observed by the Federal Government shall be considered the holiday) will be paid a minimum of four (4) hours at pro rata rates and if held beyond four (4) hours will be paid for all time so held with a minimum of eight (8) hours at pro rata rates.

Article 7

CALLED AND CANCELLED

Employees called for duty and cancelled before they have started work will be paid a minimum of two (2) hours at pro rata rates and if held for duty in excess of two (2) hours will be paid on the minute basis for the time so held. This does not apply to employees who are stopped before leaving home.

Article 8

GUARANTEE

Regularly assigned employees who are ready for service the entire month, and who do not lay off of their own accord, will be guaranteed not less than eight (8) hours for each calendar working day; i.e., calendar days of the month less Sundays and the specified legal holidays. The guarantee is predicated on employees being both ready for service the entire month and entitled to the assignment during the entire month or for that portion of the month the assignment is in effect. If, through an act of Providence, it is impossible to perform regular service, the guarantee does not apply.

The number of crews may be immediately reduced when conditions warrant and the Committee will be notified promptly.

Article 9

MEALS

(*a*) Twenty (20) minutes will be allowed for lunch at regular meal times without deduction in pay. The meal period to be arranged to permit the most efficient performance of the work.

(*b*) Employees engaged in snow plough service when held on duty in excess of eight (8) hours, and employees used in other service after completion of their day's work without being permitted to go home for their meals, will be allowed actual expenses incurred for meals with a maximum allowance of fifty (50) cents for each meal.

Article 10

ATTENDING COURT OR CORONER'S INQUEST

Employees attending Court or Coroner's Inquest on legal cases for the Company or subpoenaed by the Crown in such case will be paid actual time lost.

When no time is lost pay will be allowed on the hourly basis for each hour occupied in attending Court or Coroner's Inquest together with actual reasonable expenses incurred.

The Court witness fees will be assigned to the Company.

Article 11

MANNING OF SUNDAY AND HOLIDAY SERVICE AND EXTRA SERVICE ON OTHER DAYS

(*a*) Sunday and holiday service will be performed by the regular crews rotating in such work.

(*b*) A regularly assigned man desiring to be relieved from Sunday and/or holiday service will give twelve (12) hours' notice thereof to the Supervisor of freight train service and the next man of the same class, in order of rotation, will fill the vacancy.

(*c*) Extra pusher service will be performed by regular engine crews when available, rotating in such work.

(*d*) Extra service on days other than Sundays and the specified holidays will be performed by the regular crews when available, rotating in such work.

(*e*) When a regularly assigned man is off duty and his assignment is filled by another man, the man filling such assignment will, for rotation purposes, be considered as the regularly assigned man.

Article 12

BOOKING REST

Employees who have been on duty twelve (12) hours or more will have the right to book rest at any point on the road and will resume duty when the rest period has expired, the men to be judges of their own condition, rest period to be deducted in computing overtime. The dispatcher must be given at least one hour's

notice of the desire to book rest, but if the dispatcher will order the discontinuance of all way work and switching, trains may be taken through to terminal or point where men can be relieved. All members of the crew must take rest at the same time.

Article 13

CONSIST OF CREWS

(*a*) A regular crew will consist of one motorman, one conductor, one poleman and two brakemen unless otherwise mutually agreed upon between the Employees' Committee and the Superintendent.

(*b*) A pusher crew will consist of one motorman and one poleman and such crew may be used in express car or similar service to complete a day's work. Should a pusher crew be required to handle one or two cars, a conductor will be added to the crew.

Article 14

DISCIPLINE

No employee will be disciplined or dismissed until the charges against him have been investigated; investigation to be presided over by his superior officers. He may, however, be held off for investigation not exceeding five (5) days, and will be properly notified of the charges against him. He may select a fellow-employee to appear with him at the investigation and he and such fellow-employee will have the right to hear all of the evidence submitted and question witnesses if desired. He will, on request, be furnished with a copy of his statement taken at the investigation. Decisions will be rendered within ten (10) days from the date investigation is completed, and if not satisfied with the decision he will have the right to appeal within thirty (30) days from the date he is notified thereof. On request the General Chairman will be shown all evidence in the case.

In case discipline or dismissal is found to be unjust he will be exonerated, reinstated if dismissed, and be paid for all time lost at schedule rate for the class of service in which he was last employed.

When employees are to be disciplined the discipline will be put into effect within thirty (30) days from the date investigation is completed.

It is understood that the investigation will be completed as quickly as possible, and the layover time will be used as far as practicable.

Employees will not be held out of service pending rendering of decision, except in cases of dismissable offences.

Article 15

LEAVING THE SERVICE

When an employee resigns or is dismissed, or is laid off on account of reduction of staff, he will, when practicable, be paid within five (5) days, and, as soon as possible, be given a certificate stating term of service, and in what capacity he was employed.

Article 16

LEAVE OF ABSENCE

Employees, at the discretion of the railway, will be granted not to exceed three months' leave of absence, permission to be obtained in writing and unless employees so furloughed report for duty, on or before the expiration of such furlough, their names will be taken from the seniority roster, and if they return to work thereafter such employees shall rank as new employees, provided however such furlough may be extended by application in writing to the proper officer in ample time to receive permission or return to duty at the expiration of leave of absence, or proof furnished as to bona fide sickness preventing such return.

Leave of absence under this rule shall not be granted for the purpose of engaging in work outside the railway service, except in cases involving sickness or other exceptional circumstances, when approved by the Superintendent and Employees' Committee.

Article 17

SENIORITY AND PROMOTION

(*a*) Seniority lists will be prepared in January of each year showing the seniority standing of employees in each of the following groups:

1, Motormen; 2, Conductors; 3, Polemen; 4, Brakemen.

Seniority lists will be posted in conspicuous places in January of each year subject to appeal for 10 days. The ten-day limitation will in the case of employees absent through sickness or on leave, apply from the date of resuming duty.

(*b*) Seniority will commence from the date assigned in the respective groups.

(*c*) Polemen will be eligible for promotion to Motormen and Brakemen to Conductors in accordance with their seniority as Polemen and Brakemen. Men who fail to qualify or take promotion in their turn will rank junior as Motormen and Conductors to men accepting promotion.

Article 18

BULLETINING AND FILLING OF RUNS

(*a*) Permanent vacancies and new runs will be bulletined for five days and the senior qualified applicant will be assigned.

(*b*) Employees will be permitted to make their choice of runs in January, May and September of each year in accordance with their seniority standing, due regard being had to their ability to perform the service required.

(*c*) Temporary vacancies of less than six days will be filled by qualified spare men. Temporary vacancies of six days or over will be bulletined for twenty-four (24) hours and filled by senior qualified applicant.

Article 19

SPARE BOARD

A joint spare board for Polemen and Brakemen will be maintained provided that the number of men assigned to such spare board can average at least twenty (20) days per month. If unable to average at least twenty (20) days per month the number of men assigned to the spare board will be reduced provided request for a reduction is made by the Employees' Committee.

Article 20

DEMOTION

In the event of a reduction of crews the junior men will be reduced. The men so reduced will exercise their seniority to any run to which their seniority entitles them.

Article 21

PROMOTED TO OFFICIAL OR OTHER POSITIONS

Employees, now filling or promoted to official or other positions not covered by any schedule with the railway, will retain their seniority

rights; their names will continue to appear on the seniority list for the group in which they hold seniority and they will continue to accumulate seniority provided such seniority is asserted within thirty (30) days after release from such employment.

Article 22

TRANSPORTATION FOR COMMITTEE MEN

Members of the Employees' Committee required to do Committee work will be relieved from duty as soon as possible after request received and furnished with necessary transportation to points on the Canadian National Railways in accordance with regulations of the Pass Bureau.

Article 23

INTERPRETATION

It is understood that no change will be made in the application of any Rules contained in this Contract as interpreted by and understood by the signatories thereto without conference taking place between the Superintendent of the Railway and the General Chairmen.

Article 24

The above rates, rules and working conditions governing the service of motormen, conductors, polemen and brakemen engaged in freight service will remain in effect until changed or cancelled. Thirty (30) days' notice in writing from one party to the other must be given of their desire to do so.

FOR THE EMPLOYEES:

.....
General Chairman, B. of L. E.

.....
General Chairman, B. of R. T.

FOR THE COMPANY:

.....
General Superintendent.

CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM JANUARY 1, 1940, TO MARCH 31, 1940

CONCILIATION proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

The following statement covers the more important conciliation matters dealt with during the period January 1, 1940, to March 31, 1940. (An article covering the period October 1, 1939, to December 31, 1939, appeared in the LABOUR GAZETTE, January, 1940, page 9.)

CARTAGE SERVICE EMPLOYEES, ST. HYACINTHE AND MONTREAL, P.Q., AND BRANTFORD, LONDON AND GUELPH, ONT.—The January, 1940, issue of the LABOUR GAZETTE, at page 10, contained a reference to a dispute between the Canadian National Railways, Express Department, and certain employees in the cartage services at St. Hyacinthe and Montreal, P.Q., and Brantford, London and Guelph, Ont., being members of the Canadian Brotherhood of Railway Employees. The Railway Company had refused to grant the men's demand for increased wages and changed working conditions, and the employees had applied for the establishment of a Board of Conciliation and Investigation. Through the conciliation service of the Department arrangements were made for the renewal of negotiations between the parties directly concerned, and on February 3 an agreement was signed providing for revisions in and additions to the existing schedule of rules and rates of pay. It was stated that 310 employees were directly affected in this instance.

STEEL WORKERS, SAINT JOHN, N.B.—Steel workers, members of Local No. 1, Steelworkers' Union, employed by the Saint John Dry Dock and Shipbulding Company, Limited, Saint John, N.B., together with certain sympathizers, numbering in all approximately 150, ceased work on December 19, 1939, in protest against the introduction of a machine for the performance of work formerly done by caulkers. Previously the men had demanded increased wages and improved working conditions. The Minister of Labour informed the strikers that, due to the extension of the Industrial Disputes Investigation Act by Order in Council of November 7, 1939, and the fact that the establishment was engaged on certain war contracts, they were, presumably without their

knowledge, on strike in violation of the law. He requested that they return to work immediately and have the dispute dealt with through the conciliation service of the Department or, if they perferred, by a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. A conciliation officer visited Saint John and conferred with the committee representing the strikers, and as a consequence the men returned to work on December 23. Following the resumption of work the conciliator arranged for conferences, in some of which he participated, and in due course a mutually satisfactory agreement respecting wages and working conditions, effective February 10, was entered into, thus terminating the dispute.

Checkers and Coopers, Port of Saint John, N.B.—An application was received in the Department of Labour on January 12, 1939, for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with differences between the Shipping Federation of Canada, Inc., and its checkers, coopers, etc., in the Port of Saint John, the majority of whom were stated to be members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The report of the Board which was subsequently established recommended, among other things, as follows: "After reviewing the evidence submitted it is the recommendation of this Board that the steamship companies should negotiate an agreement with a committee of the employees representing the majority of the workers which would not debar employment to those not members of the union of which the majority may be members." At the time the Board was established a committee of employees, members of the Brotherhood, was recognized by the Shipping Federation as the bargaining agency for these employees although there was no written agreement in effect, nor did the Federation implement the Board's recommendation on this point inasmuch as representatives of another union group insisted that the majority of the employees desired to be represented by their organization, namely, Local No. 1571, Steamship Checkers and Cargo Repairmen's Union (I.L.A.). This latter union was supported in its demands by several other groups of the International Longshoremen's Association in Saint John who not only threatened to walk out if Local 1571 was not given the agreement but also declined, pending this further concession, to sign agreements which had already been negotiated with the Shipping Federation.

For the purpose of clarifying the situation, early in January, 1940, a conciliation officer of the Department of Labour conferred separately with representatives of all parties to the dispute, and it was finally agreed that a secret vote of all employees in these classifications should be taken with the understanding that the group receiving the majority vote would be recognized as the bargaining agency. Prior to the taking of the ballot the Brotherhood informed the Department that its position in the matter was that only those having six months' seniority or more should be permitted to vote. This proposal was not acceptable to either the Shipping Federation or to Local No. 1571, both these parties contending that all employees in these categories on the payrolls of the various members of the Federation should be permitted to vote. The Brotherhood would not agree on this and notified the Department that it was withdrawing from the controversy. Consequently it was only necessary to determine if the majority of the employees desired to be represented by Local No. 1571. The ballot was taken on March 22 and 23, and of those voting a substantial majority supported the International Longshoremen's Local. In view of the delay involved in these proceedings the Department suggested to the Federation that it should make effective in the case of the checkers and coopers the same concession that had been given the other I.L.A. groups, namely, a war bonus of 10 per cent, which in this instance represented an hourly increase of 6 cents, and this was done.

Coal Miners, Nova Scotia.—Early in January, 1940, a conciliation officer of the Department participated in a conference at Glace Bay, N.S., called at the request of the Provincial Department of Labour, in connection with a dispute involving the renewal of an agreement between the Dominion Coal Company, Limited, and its miners, members of District 26, United Mine Workers of America. Numerous factors made it impossible to bring about a direct settlement but the conference resulted in the parties to the dispute agreeing that a joint application would be made for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with all matters at issue.

Gold Miners, Pioneer Mines, B.C.—Late in January, 1940, Local No. 308 of the International Union of Mine, Mill and Smelter Workers, Goldbridge, B.C., urged the Department of Labour to establish a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a strike of employees of the Pioneer Gold Mines, Limited, which had been in

effect since October 8, 1939. The dispute had been receiving the attention of the provincial authorities but up to that time all attempts to dispose of the matter had been unsuccessful. As the Province of British Columbia had rescinded provincial enabling legislation a Board of Conciliation and Investigation in this instance could be established only by the joint consent of the parties to the dispute. The departmental conciliator conferred on several occasions with an official of the Company but was unable to obtain his consent to have the dispute dealt with under the federal Act. Subsequent communications from the union officials indicated the willingness of the employees to return to work waiving all demands originally made, and this information was transmitted to the Department of Labour of the Province with the suggestion that further steps be taken to bring about the resumption of work. Full particulars of this strike are given in the articles on strikes and lock-outs appearing in the November, December, January, February and March issues of the Labour Gazette, also elsewhere in this issue. It was stated that 142 employees were involved in this dispute.

Marine Engineers, Great Lakes.—An application for the establishment by the Minister of Labour of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department on February 5, 1940, on behalf of the marine engineers employed by the Paterson Steamships Limited, Fort William, Ont., members of the National Association of Marine Engineers of Canada, Inc., and said to number 75. A request for increased wages and improved working conditions was stated to be the cause of the dispute. Following receipt of the application a conciliator of the Department conferred with a representative of the employers and considerable correspondence was exchanged which finally resulted in a settlement of the dispute and the withdrawal of the Board application.

Gold Miners, Kirkland Lake, Ont.—An application for the establishment by the Minister of Labour of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour on December 8, 1939, from miners and certain other classes of labour employed by the Teck-Hughes Gold Mines, Limited, Kirkland Lake, Ont., a number of whom were members of Local 240 of the International Union of Mine, Mill and Smelter Workers. Approximately 630 employees were stated to be directly affected. The application was challenged by the Company on the ground that the ballot taken by the union had been improperly conducted and did not represent the views of the majority of those affected. Subsequently, on February 7, 1940, under the supervision of an officer of the Department of Labour, a ballot of the men was taken in a manner which met the full approval of officials of the Company and representatives of the applicants. This vote resulted in a substantial majority in support of Board procedure. Following this a conciliation officer of the Department conferred with a committee of the employees and ascertained that the men were quite willing to confer with the Company with a view to reaching a direct settlement. The Management, however, was not agreeable to this and insisted that a Board be established. Board procedure followed.

Operators, Linemen, etc., Quebec, P.Q.—On February 12, 1940, an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour to deal with a dispute between the Quebec Power Company, Quebec, P.Q., and its operators, linemen and metermen, members of Local Union "B" 1106, International Brotherhood of Electrical Workers. The union had requested the deletion from the agreement of part of the clause relating to overtime and conferences had failed to bring about any satisfactory arrangement. A conciliator of the Department of Labour dealt with the dispute, and in the conferences which followed the Company challenged the right of the union to negotiate for all the employees covered in the agreement. At the end of March the case was still before the Department.

Veneer Mill Workers, Saint John, N.B.—On February 16, 1940, an application was received in the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute respecting wages and working conditions between the Canada Veneers Limited, Saint John, N.B., and its employees in all departments being members of Local Union No. 2533, Veneer Mill Workers, United Brotherhood of Carpenters and Joiners of America. Through the conciliation service of the Department arrangements were made for a joint conference between the two parties but this did not materialize and a strike became imminent. The application as received in the Department did not meet the requirements of the governing statute, but the conciliator dealing with the dispute secured the approval of the employer to Board procedure, and on March 23 a Board was established by joint consent. One hundred and ninety employees

were stated to be directly affected by the dispute.

Electricians, Kingston, Ont.—During the latter part of February, 1940, the Department received word of a threatened strike of electricians at Kingston to enforce a demand for increased wages. A conciliation officer of the Department conferred with officials of the union involved, namely, the International Brotherhood of Electrical Workers, and with the employers. At that time the electricians were seeking an 85 cent hourly rate as against the 75 cent rate then being paid generally. Certain of the employers indicated their willingness to raise the rate to 80 cents, effective April 1, but were not disposed to sign an agreement, and a settlement was not secured. Subsequently the employees of three companies applied for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, but the application did not meet the requirements of the governing statute. On March 21, 34 electricians ceased work. Through the efforts of the conciliation service of the Department one company employing the majority of the electricians then working in the city agreed to raise the hourly rate to 80 cents. This was accepted by the strikers, and the strike was terminated the same day (March 21).

Hoist Operators, etc., Britt and Jack Fish, Ont.—An application for the establishment of a Board of Conciliation and Investigation was received in the Department during March to deal with a dispute between the Canadian Pacific Railway Company and certain employees at Britt and Jack Fish, Ont., being clam tower operators, riggers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The cause of the dispute was stated to be the employees' request for increased wages and for either an agreement covering the employees at Jack Fish or the inclusion of this group in the agreement at Britt. A conciliator of the Department endeavoured through conferences to find a basis for a direct settlement of this issue without the necessity of Board procedure, and at the close of March the matter was still receiving consideration.

Patternmakers, Toronto, Ont.—Late in the afternoon of March 28 it came to the knowledge of the Department that a strike of patternmakers employed in the plant of the Canadian General Electric Company, Toronto, Ont., had been called for the following morning, the Company having declined to consider the employees' request for a 10-cent hourly increase in wages. It was stated that 14 employees were involved. The President of the Patternmakers' Association of Toronto was contacted immediately and he agreed to rescind the strike notice temporarily in order that the Department might endeavour to bring about a direct settlement. The following day a conciliation officer of the Department conferred with the Manager of the plant but was informed that no wage increase would be granted. A further conference with the representative of the patternmakers resulted in that local agreeing to board procedure under the Industrial Disputes Investigation Act, and the dispute is being dealt with in that manner.

Shipyard Employees, Vancouver and Victoria, B.C.—During March, 1940, a conciliator of the Department of Labour conferred with representatives of several labour organizations representing employees in a number of shipyards in Vancouver and Victoria presently engaged on war contracts, in regard to demands of the employees for increased wages. Conferences were also held with officials of the Companies involved and while in certain instances wage concessions were offered they were not sufficient to end the dispute, and at the end of the month it appeared probable that all the disputes involving several companies would be dealt with by one Board under the Industrial Disputes Investigation Act as extended by Order in Council P.C. 3495 of 7th November, 1939.

Canadian Pacific Railway Pensions, 1939

According to the annual report of the Canadian Pacific Railway for the year ended December 31, 1939, pension disbursements for the year amounted to $2,722,051. Since the inception of the contributory pension plan in January, 1937, the employee contributions, less refunds, have amounted to $5,938,670.

The report also states that under the provisions of the United States Carriers Taxing Act, the taxes levied on the Company and its employees, who come under the provisions of the United States Railroad Retirement Act amounted in each case to $65,181, being at the rate of 2¾ per cent of the compensation earned by such employees.

During 1939, 602 employees were pensioned by the Railway, but owing to deaths and other causes, there was a net increase of only 358 on the pension payroll. As at December 31, the distribution by ages of pensioners was as follows: Under sixty years of age, 204; sixty to sixty-four, 351; from sixty-five to seventy, 1,840; and over seventy years of age, 1,404, a total of 3,799 pensioners.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1940

THE following table shows the number of disputes, workers involved and time loss for March, 1940, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time lost in man working days
*Mar. 1940.....	11	2,380	19,276
*Feb. 1940.....	14	3,161	14,687
Mar. 1939.....	7	1,598	9,982

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

While there were decreases in the number of strikes and lockouts and of workers involved, there was a considerable increase in the time loss incurred for March as compared with February owing to strikes which involved seven hundred coal miners at Mountain Park, Alberta, and upwards of six hundred cotton factory workers at Milltown, N.B. In February most of the time loss was caused by strikes of coal handlers at Toronto, Ont., and gold miners at Pioneer Mines, B.C. In March, 1939, only one dispute caused considerable time loss, a strike of rubber workers at Kitchener, Ont.

Two disputes, involving 248 workers, were carried over from February, and nine disputes commenced during March. Of these eleven disputes, seven were terminated during the month, two resulting in favour of the employers and one in favour of the workers involved, one being partially successful, two resulting in compromise settlements and the result of one being recorded as indefinite.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. Information is available as to two such disputes, namely: fur factory workers, Toronto, Ont., October 17, 1939-October 31, 1939, one employer, and work clothing factory workers, Winnipeg, Man., December 1, 1939-December 15, 1939, one employer.

A minor dispute involved three bakery drivers in a stoppage for one day, March 23, at Kirkland Lake, Ont., the workers demanding an agreement providing for a change from weekly wage rates at $18 to $25 to a basic weekly rate of $11 plus six per cent commission, two weeks' annual holiday and sick leave with pay, etc. These demands were conceded.

Strike of Cotton Factory Workers at St. Gregoire de Montmorency, P.Q., February 19, 1940, to February 23, 1940.

It has been ascertained that the information on this dispute published in the Labour Gazette, for March, page 207, was not correct in some respects. The employees involved were winder tenders, not weavers, and were being paid temporarily at $14 for 45 hours per week or 31·11 cents per hour, pending the establishment of new piece rates. When the new piece rates were posted the tenders refused to work. As a result of discussions with officials of the Quebec Department of Labour and the Fair Wage Board it was arranged that the above weekly and hourly rates would be paid as basic rates pending trial of the new piece rates but that anyone earning more at the posted piece rates would be paid such amounts. The weekly rate of $14 for 45 hours was ten per cent higher than the previous rate of $12.75 for 50 hours. The reduction in hours, with the increase in the weekly rate, made the hourly rate 31·11 cents—nearly 22 per cent higher than before.

Strike of Electric Wire Workers at Brockville, Ont., January 26, 1940, to February 2, 1940.

It has been reported to the Department that certain important proposals of the union involved in this dispute as to amendments to the agreement were not included in the statement in the Labour Gazette for February, 1940, pp. 107 and 108. The union asked for recognition as the sole bargaining agency for all employees and for the check-off for union dues and it is stated that it was over these points that the negotiations broke down. These proposals were not conceded. The agreement signed following the strike is outlined elsewhere in this issue.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress Prior to March

Gold Miners, Pioneer Mines, B.C.—Following the reopening of the mine on March 6, with a staff of about eighty employees who had not participated in the strike, the union called off the strike on Sunday, March 10, and stated the strikers would resume work on the conditions prior to the dispute. The company was reported to have stated that a preference in employment would be given to former employees but that a full crew would not be required for some time.

Salt Mine Workers, Malagash, N.S.—As a result of conciliation by the provincial Department of Labour, the strike was terminated on March 7, the men agreeing to resume work for a period when the management undertook to reconsider the wage scale when conditions improved.

Disputes Commencing During March

Apple Processing Workers, Bridgetown, N.S.—A number of girls in one establishment ceased work on March 5 to secure an increase in wages, piece rates, and on March 6 some men and youths also ceased work to secure an increase from $1.50 per ten hour day to $1.75. The increased rates proposed were stated to be the rates paid in other localities in the district. The management offered a partial increase in piece rates and the girls resumed work. The men were offered $1.60 and some returned. Others waited to check up on the rates in other localities. Work was resumed at $1.60 per day on March 8 but some of the young men were replaced.

Shoe Factory Workers, Montreal, P.Q.—A number of employees in the lasting and finishing department of one establishment ceased work on March 28. The National Catholic Union reported that they had demanded a change from hourly rates to piece rates. The employer stated that the cessation was due to the discharge of one employee and that all were replaced by the end of the month. As the employer refused to negotiate the union referred the dispute to the provincial Department of Labour.

Cotton Factory Workers, Spinners, Magog, P.Q.—Spinners on the night shift ceased work on March 4 demanding the dismissal of a foreman, alleging that he intimidated the workers. Two hundred other workers were reported to be indirectly affected, being able to work part time only. As a result of conciliation by the Quebec Department of Labour it was arranged that all foremen would be under close supervision by the superintendent and work was resumed after four days. The day shift was reported as not affected by the dispute.

Cotton Factory Workers, Milltown, N.B.—Employees in one establishment ceased work on March 18, their demand for an agreement with the Textile Workers' Federal Union No. 10, affiliated with the Trades and Labour Congress of Canada, providing for adjustments in wages and hours, not having been conceded. The company objected to a closed shop union agreement but the management is reported to have proposed that a vote of all employees, except officials, etc., should be taken and that if supported by a majority an agreement would be negotiated with the union as representing its members, it being stipulated that the officers should be employees. Conferences of the management and union officers, participated in by a vice-president of the Congress, were held for some days following the stoppage but a settlement was not reached. Later, it was reported that the provincial Fair Wage Officer was dealing with the dispute.

Foundry Workers, Oshawa, Ont.—Employees in one establishment ceased work on March 27 to secure a closed shop union agreement, wage increases, vacations with pay, etc. The employees were members of Lodge No. 1817, Amalgamated Association of Iron, Steel and Tin Workers of North America (Steel Workers' Organizing Committee). Negotiations were reported to have been in progress for some weeks, the management offering to adjust rates for individual positions but stating that a general increase was not possible, as the majority of the men were receiving the highest rates in the industry. The union stated that the closed shop was desired because union members were discriminated against and non-union employees favoured in assignment of jobs and in reduction of staff. On March 28 it was reported that the picket prevented foremen from entering the plant and the passage of trucks until police protection was secured. At the end of the month a settlement had not been reported.

Plasterers, Toronto, Ont.—Members of the Operative Plasterers and Cement Finishers' International Association employed by twelve firms, members of the Contracting Plasterers' Association, ceased work on March 1, negotiations for the renewal of an agreement which expired on February 29 not having been successful. The union proposed an increase in wages from 90 cents per hour to $1.10 per hour but offered to accept $1. The employers

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1940*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to March, 1940				
MINING, ETC.—				
Gold miners, Pioneer Mines, B.C.	1	142	1,136	Commenced Oct. 8, 1939; for recognition of union, check-off of union dues and increased wages; terminated March 9, 1940; return of workers; in favour of employer.
Salt mine workers, Malagash, N.S.	1	106	636	Commenced Feb. 19; for increased wages, reduced hours, etc.; terminated Mar. 7; conciliation (provincial); indefinite.
(b) Strikes and Lockouts commencing during March, 1940				
MINING, ETC.—				
Coal miners, Mountain Park, Alta.	1	700	7,000	Commenced March 18; against employment of a certain man as an official; unterminated.
MANUFACTURING—				
Vegetable Foods, Etc.—				
Apple processing workers, Bridgetown, N.S.	1	115	180	Commenced March 5; for increase in wages; terminated March 8; negotiations; compromise.
Boots and Shoes—				
Shoe factory workers, Montreal, P.Q.	1	20	60	Commenced Mar. 28; for change in method of wage payment and against discharge of worker; unterminated.
Textiles, Clothing, Etc.—				
Cotton factory workers (spinners), Magog, P.Q.	1	100	400	Commenced Mar. 4; for discharge of foreman; terminated Mar. 7; conciliation (provincial); partially successful.
Cotton factory workers, Milltown, N.B.	1	663	6,630	Commenced Mar. 18; for union recognition; adjustments in wages and hours, etc.; unterminated.
Metal Products—				
Foundry workers, Oshawa, Ont.	1	200	800	Commenced Mar. 27; for closed shop union agreement, wage increases, etc., unterminated.
CONSTRUCTION—				
Buildings and Structures—				
Plasterers, Toronto, Ont.	12	200	1,200	Commenced Mar. 1; for increased wages; terminated Mar. 8; negotiations; in favour of workers.
Electricians, Kingston, Ont.	4	34	34	Commenced Mar. 21; for increased wages; terminated Mar. 21; negotiations; in favour of workers.
SERVICE—				
Custom and Repair—				
Garage workers, Halifax, N.S.	15	100	1,200	Commenced Mar. 4; for union recognition, increased wages and reduced hours; terminated Mar. 18; return of workers: in favour of employers.

*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

held out for the previous rate owing to competition with contracting plasterers not members of the association. As a result of negotiations the agreement was renewed with an increase in the wage rate to $1 per hour with a provision that all jobs should be carried on under the agreements with the lathers' and plasterers' labourers' unions and that the union would furnish the association with a list of the names of all contractors who signed such agreements and any changes in the list. Work was resumed on March 11.

Electrical Workers, Kingston, Ont.—Members of the International Brotherhood of Electrical Workers ceased work on March 21, their demand for an increase in the rate of wages to 85 cents per hour having been refused. A schedule of wages and hours for the Electrical Repair and Construction Industry in the Kingston zone approved by order in council under the Ontario Industrial Standards Act effective from May 23, 1939, provided for a minimum rate of 70 cents per hour but the minimum rate on federal government contracts was 75 cents per hour. In March, the union had originally proposed a rate of 90 cents per hour but lowered this to 85 cents. Two conciliation officers of the Department of Labour visited Kingston and certain of the electrical contractors offered to raise the rate to 80 cents per hour on April 1 but this was not accepted by the union. After the strike had been on one day one of the contractors employing a majority of the electricians agreed to raise the rate to 80 cents per hour immediately. The union terminated the strike and work was resumed on March 23 by all. The previous day was a holiday.

Garage Workers, Halifax, N.S.—Employees in thirteen garages ceased work on March 4, the employers having refused to sign agreements with the International Association of Machinists providing for increases to 70 cents per hour and standard hours at forty-four per week. It was reported in the press that two garages made agreements with the union. A number of non-union employees were reported to have joined the strikers on March 6 and two other garages became involved. On March 9 the union requested the provincial Department of Labour to intervene but the garage owners refused to meet with union representatives, stating that they were unable to meet the proposals of the union. On March 18 the strike was called off by the union. It was reported that a small number of the workers had secured increases in wages, but not the union rate, and that nearly all resumed work, a small number securing work elsewhere.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month bringing down to date that given in the March, 1940, issue in the review of Strikes and Lockouts in Canada and Other Countries, 1939. The letter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned. Information as to particular disputes is taken for the most part from newspapers.

Great Britain and Northern Ireland

In Great Britain the *Ministry of Labour Gazette* publishes statistics dealing with all strikes and gives some details of the more important ones.

The number of disputes which began during January, numbered 73 which together with 3 unterminated at the end of December made a total of 76 in progress during the month. The number of workers involved in these disputes was 56,800 and the resultant time-loss was 108,000 man-working days.

Of the 73 disputes which began during January, 20 arose out of demands for increased wages while 18 were over other wage questions; one strike was over a question of working hours; questions respecting the employment of particular classes or persons led to 15 strikes; 11 were over questions of working conditions; and 6 were over questions of trade union principle. Two strikes, which involved about 27,600 workers, or nearly half of the number of workers involved in all strikes during the month, were in sympathy with strikers in other disputes.

Final settlements reached during January, numbered 51. Of these, 10 were settled in favour of the workers, 30 in favour of the employers, and 11 resulted in compromises. In 12 other disputes work was resumed pending negotiations.

At Stepps, Lanarkshire, 1,000 coal miners struck on January 12, in protest against the dismissal of three men. On January 29, there was a one-day sympathetic strike of 26,000 colliery workpeople in Lanarkshire, and parts of Dumbartonshire and West Lothian. The dispute was settled when the management agreed to reinstate the three workers after a one-week suspension. Work was resumed on February 17.

In London about 5,000 machinists employed by several aeroplane manufacturing firms ceased work for a part of January 20 in protest against an alleged delay in considering a claim for increased wages.

In one colliery near Rotherham, Yorkshire, 2,310 workers of various classes went on strike on January 3, demanding increased wages. Work was resumed the following day with no change in the wage scale. About 250 workers were indirectly involved.

A demand for a wage increase of 4s. per day led to a strike of 1,800 trawler hands at Aberdeen on January 22. Work was resumed on January 27, after a settlement was reached under which the workers were given an increase in wages of 6d. per day and additional bonus payments on the poundage system.

A strike of 482 workpeople in one colliery at Shotts, Lanarkshire, on January 20 led to a sympathetic strike of 1,590 workers in other collieries on January 22. The dispute arose out of a demand for payment of full wages in respect of shifts in which less than 7½ hours were worked. Work was resumed on January 22, the employees agreeing to work full shifts in future.

Near Pontefract, Yorkshire, 1,530 colliery workers stopped work on January 22 protesting against unsatisfactory working conditions; 101 workers were indirectly involved. Work was resumed the same day, no change in conditions being reported.

In the same district, 1,777 colliery workers went on strike on January 23, demanding the reinstatement of a workmen's inspector who was dismissed for alleged contravention of the Coal Mines Act; 82 workers were indirectly affected. The majority of the strikers returned to work on January 25, but the terms of the settlement were not noted.

In Northern Ireland, 1,200 workers in the baking trade went on strike demanding an increase of 15s. per week, instead of the increase of 4s. offered by the employers. Those indirectly involved numbered 2,500. The strikers ceased work on January 8 but resumed the next day when the dispute was referred to arbitration under the Industrial Courts Act, 1919. The workers were subsequently awarded an increase of 4s. per week.

The number of strikes which began during February was 57 and 14 were unterminated at the end of January, making a total of 71 in progress during February. The number of workers involved was 40,800 and the resulting time loss was 168,000 man-working days.

Of the 57 disputes which began during February, 16 arose out of demands for increased wages and 10 were over other wage questions; one was over a question of working hours; 14 arose out of questions respecting the employment of particular classes or persons; 13 were over questions of working conditions; and two were over questions of trade union principle. One strike was due to sympathetic action.

Final settlements reached during February numbered 47. Of these disputes 12 were settled in favour of the workers, 24 were settled in favour of the employers and 11 resulted in compromises. In seven other disputes work was resumed pending negotiations.

The strike which involved the largest number of workers during February was in Yorkshire where 20,000 colliery employees struck as the result of dissatisfaction with arrangements for a war addition to wages, and with the effect on wages of the monthly ascertainments of proceeds. Stoppages began and ended at various dates, mainly between February 15 and March 2, work being resumed pending negotiations.

At Birmingham, 2,500 workers employed by a firm manufacturing motors and motor accessories went on strike on February 26, objecting to a new method of determining output which they claimed diminished their earnings. An amicable settlement was effected and work was resumed on February 26.

On February 26, 2,500 electricians and other employees of an aircraft factory at Coventry, ceased work demanding a basic rate for electricians of 2s. 6d. per hour, plus national bonuses. Work was resumed on March 2, pending negotiations.

A demand for payment of piece work rates alleged to be appropriate to Government contracts led to a strike of boot and shoe workers employed by one firm near Leicester. Approximately 210 workers ceased work on February 14 but resumed on February 15. A further stoppage occurred on February 19 and by February 21 there were 1,670 workers involved. Work was resumed on February 24, when it was agreed to refer the dispute to a sub-committee of Leicestshire and Rutland Board of Conciliation and Arbitration for the Boot and Shoe Trade.

At Belfast, 1,450 employees in a linen factory ceased work on February 26, refusing to work with non-unionists. No settlement had been reported at the end of the month.

At Birmingham, 1,196 workers in an aircraft factory went on strike because of the refusal of the management to permit them to make tea during working hours. Work was resumed on February 26 after the management made arrangements to send tea wagons around the shops at specified times.

A demand for increased wages by navvies, bricklayers and labourers employed by a building firm near Manchester, led to a strike of 1,074 workers on February 20. Work was resumed the next day when the navvies were granted an increase of ½d. per hour.

No other strikes which were reported to have begun during January or February involved 1,000 or more workers.

Australia

On March 11, according to a press report, about 25,000 employees of more than 200 mines went on strike demanding a forty-hour week for surface workers, with wage adjustments to avert reduction of earnings. They also demanded an annual holiday of two weeks. The employers are reported to be refusing to confer with the Miners' Federation until the latter obeys a ruling of an arbitration court. No details of the strike have been noted since its commencement.

New Zealand

The Dominion of New Zealand has recently published statistics dealing with industrial disputes which took place during 1939. During the year there were 66 strikes which involved 16,082 employees of 636 firms and which resulted in a time loss of 54,101 man working days. The estimated loss in wages was £60,754. During 1938 there were 72 strikes involving 11,388 workers and resulting in a time loss of 35,456 man working days.

India

On March 5, it was reported that most of Bombay's 160,000 textile workers were on strike demanding an increase of 15 per cent in wage rates to offset increases in the cost of living. The employers, acting on advice of government conciliators, offered an increase of 10 per cent, but this was refused by the strikers. The strike was conducted without violence until March 27 when a clash was reported to have occurred between men acting as pickets and a number of strike breakers.

British South Africa

Demands for increased wages and overtime rates, reductions in overtime, adequate housing, an eight hour day and closed shop led to a strike of copper miners in the Nkana concession of Luangwa district of Northern Rhodesia on March 17. The number involved by the beginning of April was reported to be about 3,000.

Wartime Medical Service in France

Measures have been taken in France, as in other countries, to secure the provision of medical care for the civil population in wartime and to maintain the health and social insurance and assistance services as well as to protect the practices of doctors absent on active service. The system adopted is governed by the Legislative Decree of September 11, 1939, which provides for the scheme of collective requisitioning of doctors.

Credit Unions in Nova Scotia

In the report of the Provincial Secretary for Nova Scotia covering the fiscal year ended November 30, 1939, a report made by the Inspector of Credit Unions for the province shows that 182 credit union societies were in operation during 1939 and had a total membership of 27,113. Share capital amounted to $678,597.98; deposits totalled $12,108.01; while the loans during the nine months covered by the report amounted to $589,441.28. Net assets were set at $748,269.22 and guaranty funds at $21,702.45.

The report states that credit unions are now operating in all counties of the province with the exception of Shelburne and Annapolis. With 182 credit unions in operation in 1939, an increase of 34 credit unions is indicated compared with the 148 in operation in 1938.

There were 5,065 accidents reported to the Workmen's Compensation Board of Ontario during the month of March, as compared with 5,502 during February, and 4,540 during March a year ago. The benefits awarded amounted to $488,220.84, of which $375,802.24 was for compensation and $112,418.60 for medical aid.

This brings the total number of accidents reported during the first quarter of 1940 to 16,109, as against 13,389 during the same period of 1939, and the benefits awarded during the first three months of this year amounted to $1,646,530.65, as compared with $1,491,025.38 during the corresponding period of 1939.

WARTIME PRICES AND TRADE BOARD

Summary of Activities for Period January 1 to March 31, 1940

IN the March issue of this publication there was given a review of the administrative activities of the Wartime Prices and Trade Board during four months' operation from September 3 to December 31, 1939. The Board has issued recently a further quarterly summary covering the period from January 1 to March 31, 1940.

The situation in regard to various commodities, prefaced by a general review, is given in the following paragraphs from the Board's summary as of March 31, 1940:—

In the last four months of 1939, the problems faced by the Board were chiefly those which inevitably arise in a rapid change from a peacetime to a wartime economy. Prompt action was required to prevent unwarranted price increases, and to meet the problem of the shortage which had developed in the supply of certain specific commodities.

As opposed to the closing months of 1939, during the first quarter of the current year there was no acute shortage of any necessary of life in Canada. Thus there was both less temptation and less opportunity to take advantage of the consumer, and the Board had to make less use of its regulatory and preventive powers.

In order to extend the scope of its investigations, in March the Board enlarged its staff of technical advisers by the appointment of Professor James M. MacDonald, head of the Department of Commerce of the University of Manitoba, who will be responsible for the statistical analysis of price and supply problems.

Much of the day-to-day work of the Board continues to be carried out through the facilities afforded by other government departments. The collection and most of the compilation of statistics required by the Board, touching almost every aspect and facet of Canadian trade and commerce, continue to be handled adequately and expeditiously by the Dominion Bureau of Statistics. The coast-to-coast inspection service of the Weights and Measures Branch provides the Board with a constant check on retail prices, and also aids in curbing undue price advances. The Royal Canadian Mounted Police are used, when required, for enforcement proceedings. The services of certain branches of provincial governments have been made available to the Board.

The Board continues to operate in close co-operation with the Agricultural Supplies Board, the Foreign Exchange Control Board, the Canadian Shipping Board, and the War Supply Board.

Enforcement

The elimination of the fear of shortage of various commodities which obtained at the outset of the war, coupled with the relative stability in prices of the necessaries of life which later manifested itself, reduced materially the number of complaints received by the Board in the first quarter of 1940 as compared with the initial months of its operations.

Each complaint received the attention of the Board and was investigated. In some instances, the allegations necessitated personal investigation by the inspectors of the Weights and Measures Branch; in others, the services of the Royal Canadian Mounted Police were employed.

As a result of these and other investigations, irregularities in merchandising practice were immediately corrected. During the quarter, the investigations of the Board disclosed no instances of hoarding or profiteering which warranted prosecution.

Wool

The continuous efforts of the Board during the fall of 1939 to secure the release and shipment to Canada of wools for manufacturing purposes culminated in January of this year, when an agreement was reached with the Wool Control of the United Kingdom providing an assurance of:

Abundant supplies of merinos for 1940.

Adequate supplies of crossbreds for all Canadian military requirements up to September 10 next.

A substantial proportion of the estimated requirements of crossbred wool for civilian purposes up to September 10 next.

While there appears to be no probability of any scarcity of wool in Canada, nevertheless all crossbred grades will have to be used with economy. It will continue to be necessary to substitute, to some degree, finer and re-worked wools for these grades.

While the wool requirements of carpet-makers are not large in comparison with those of the weaving and knitting trades, the maintenance of the supply also involved negotiations with the British Wool Control. East Indian wool, which is largely used for this purpose, is subject to the jurisdiction of the Wool Control. In February, the Wool Administrator obtained the release of a

quantity of carpet wools sufficient for existing needs and for some months to come.

Towards the end of 1939, upon the recommendation of the Board, consent was obtained from South Africa, under the treaty with that country, for the temporary removal from January 1 of duties on crossbred wool from countries entitled to the intermediate tariff.

This arrangement was terminated on February 20, when adequate supplies to supplement the 1940 Canadian clip had been guaranteed by the British Wool Control. The free entry privilege was limited to wool and tops purchased before February 20 and imported before the end of April.

The November order of the Board fixing a maximum price for quarter-blood wools was rescinded in January after it had served its purpose. This order was successful in moving the remainder of the pre-war stocks of wool into consumption and enforcing its sale on the price basis which had already been voluntarily agreed upon by the great majority of Canadian dealers and manufacturers.

During the first quarter of the year both the Board and the Wool Administrator continued to maintain constant contact with the Canadian wool growers, dealers, and manufacturers. Conferences were also held with the War Supply Board respecting present and future military needs.

At the beginning of March, the Board began a preliminary investigation of the price spreads and mark-ups in the manufacture of woollen and worsted cloths.

Sugar

Towards the end of December, rumours regarding a possible price increase created, especially in certain centres, an excessive demand for sugar. The buying flurry continued during the greater part of January. The situation was adequately handled by the refiners who, with the full approval of the Sugar Administrator, in many instances limited sales to industrial users and to distributors to the volume which had obtained in January, 1939.

During the first quarter of 1940, adequate shipping facilities have been made available and there was no interruption in the movement of raw sugar to Canada.

There has been no change in the price which the Sugar Administrator pays for raw sugar, nor has there been any change in the wholesale price of refined sugar in Canada.

In March the Administrator, acting in conjunction with the British Sugar Control, facilitated the conclusion of a most-favoured-nation agreement with the Republic of San Domingo whereby, in return for purchases of raw sugar, Canada secured important tariff concessions in that country for various products, including fish and potatoes.

Hides and Leather

During the first quarter of the year, domestic production and imports of hides have been sufficient to enable tanners to meet without difficulty all civilian and military demands. Price movements in raw stock and finished leather products are under the constant scrutiny of the Administrator.

Through the monthly census of the industry, initiated in the last quarter of 1939, the Hides and Leather Administrator is now receiving regular returns from packers, dealers, and tanners covering the production of leather, hides, and skins in the Dominion. The collection and compilation of the data is carried out by the Dominion Bureau of Statistics which has commenced the publication of a monthly report on the total supply of stocks of raw hides and skins.

During the quarter, the Administrator and his technical advisers visited representative tanneries.

The Administrator continues to act in co-operation with the Leather Controller of the United Kingdom. Arrangements were completed during the quarter for the co-ordination of Canadian and United Kingdom purchases of hides in foreign countries.

Conferences were also held by the Board and the Administrator with the newly-appointed High Commissioner for New Zealand, before his departure abroad, regarding the future supply of calfskins from that country.

Coal

The satisfactory coal situation of 1939 continued during the first quarter of 1940. During the past three months the Board and the Coal Administrator have continued their negotiations with the Canadian Shipping Board with a view to securing the movement of a maximum tonnage of Maritime coal into Ontario and Quebec during the coming navigation season.

In March, in order to render more complete and effective the licensing plan put into effect in November, 1939, the Board issued Order No. 4 prohibiting sales of coal or coke for further resale except to holders of licences issued by the Board.

The coal licensing plan has been operating satisfactorily since its inception, and had received the support of the trade. More than 5,000 licences were issued for the period ending March 31, 1940. Licences for the 1940-41 fiscal year have been issued.

During the quarter, the Coal Administrator held conference with representatives of the United States Coal mining industry, and also visited the larger producers in Western Canada.

Animal Feeds

During the last four months of 1939, the Board, in conjunction with the Agricultural Supplies Board and its experts, conducted investigations into the supply and price of animal feeds, including mill feeds. In February the Board appointed a Committee on Animal Feeds to continue these investigations and to keep the Board constantly informed regarding the situation throughout the Dominion. The committee is composed of the following members: F. W. Walsh, Halifax, Chairman, Director of Marketing, the Nova Scotia Department of Agriculture; C. B. Davidson, Winnipeg, Economist, formerly Statistician to the Wheat Board; and W. R. White, Ottawa, Feedstuffs Branch, the Dominion Department of Agriculture.

On February 29, the Board and the Committee held a conference with the Canadian milling industry respecting the supply and price of mill feeds. On March 15, the Committee received a deputation from the National Dairy Council of Canada.

The members of the Committee on Animal Feeds are continuously in touch with, and studying the Canadian feedstuffs situation. The Committee will continue to meet frequently in Ottawa.

Economic Adviser Appointed

The appointment of Professor James M. MacDonald as Economic Adviser on the staff of the Wartime Prices and Trade Board was announced on March 29 by Hector B. McKinnon, chairman of the Board. Professor MacDonald is a graduate of St. Francis Xavier University with post-graduate training at Harvard; he has been on the staff of Dalhousie University and Harvard, and presently heads the Department of Commerce, of the University of Manitoba where he has been granted leave of absence. He will assume his new duties in Ottawa in the middle of April.

Effect of War on Women's Labour Standards

The Women's Bureau of the United States Department of Labour has summarized in the March issue of its official publication *The Woman Worker,* the effect of the war on women's labour standards in certain countries.

It points out that "even countries at war recognize that more effective work is done if some effort can be made to keep up standards of labour," adding however, that "exceptional cases do not always permit the highest standards to be maintained." The following paragraphs indicate the situation as summarized by the Women's Bureau:

French wartime regulations prescribe normal hours of women's work not to exceed 10 a day, 60 a week, but labour inspectors may permit other hours, including women's night-work employment on work of national importance. Germany restored the 8-hour day as standard, beginning January 1; only where "necessary", may hours be as long as 10, and then with certain exceptions, including nursing mothers, those in the last 3 months of pregnancy, and persons in unhealthy work subject to special hours regulations.

In Great Britain the Factories Act of 1937 had established a 48-hour week for women as a standard. The secretary of state may now exempt any particular premises or operations, or class of premises or operations. An emergency measure permits employment of women telephonists until 10 or 10.30 p.m., or even later if absolutely necessary. . . . .

In Belgium, in case of partial or general mobilization, exceptions may be permitted to the regulation prohibiting women's work at night. In Sweden the War Department has asked for suspension of night-work prohibition.

Extent of Employment.—In Great Britain, in the early days of the war, there was a considerable increase in women registered as unemployed. Causes of this included stoppage or slackening in industries employing many women, such as service, trade, clothing, and certain textile industries; evacuation of women from their normal places of employment; search for work by women whose usual source of income was cut off. In some lines of work, however, women's activities have increased. Civil service departments have been authorized to re-employ married women temporarily. The substitution of women for men in munitions factories and in the transport industry is being considered.

Various measures are now being taken to increase women's activities. The Women's Engineering Society is training their sex for munitions work. The Women's Employment Federation, in agreement with the Ministry of Labour, has established an emergency register, noting qualifications of women as accountants, bacteriologists, magistrates, statisticians, engineers, or those with catering experience available for canteen posts. The Women's Royal Naval Service, organized by the Admiralty, is recruiting those capable of office duties, motor transport, cooking, and general work as stewards, messengers, storekeepers, and the like. Chief constables in many parts of the country are enrolling women to take men's places as special constables, drivers of police cars, clerical workers, and telephone operators.

In Germany, at the beginning of the war, the extension of the employment of women to new fields became marked, and women took the place of men in certain jobs considered typically masculine, as postmen, tramway conductors, and so forth. Last traces of the 1933 restrictions on women disappeared when an order of September 1 permitted retention of all married women officials in the civil service.

The French Ministry of Labour appealed early in September to all available women workers, particularly those having experience in certain specified operations in the metal industries, to report to the employment exchanges; the Ministry of Health appealed to women nurses and welfare workers to enter the public services.

ESTABLISHMENT OF PERMANENT COMMITTEE OF ADJUSTMENT IN RAILWAY CO-OPERATION

Fulfillment of Provisions of Amended Canadian National-Canadian Pacific Act—Text of First Regulations

THE Permanent Committee of Adjustment provided under the terms of the amended Canadian National-Canadian Pacific Act, 1939 (Labour Gazette, July, 1939, pages 668-669) for the adjustment of disputes or differences arising out of interpretations of the Schedule, was organized recently at a meeting of representatives of the Railways and the employees. At a subsequent meeting on March 6, the Committee adopted its first regulations.

The Canadian National-Canadian Pacific Act was first enacted in 1933 (Labour Gazette, June, 1933, page 597) and provided for co-operation between these two transportation systems particularly in the "pooling" of operations and facilities. It further enacted that "that part of the Railway Act which relates to the compensation of employees for financial loss caused to them by removal, closing or abandonment of any railway station or divisional point"—also that the provisions of the Industrial Disputes Investigation Act—"shall not be deemed to be inconsistent with the provisions" of the Canadian National-Canadian Pacific Act.

At the 1939 session of Parliament the Canadian National-Canadian Pacific Act of 1933 was amended by the provision of compensation to employees who are deprived of employment as a result of co-operative measures between the two Railways, and also by provision for a Permanent Committee of Adjustment to adjust differences or disputes arising out of interpretations and applications of the Schedule.

The establishment of this Committee is provided in Section 7 of the Schedule as follows:

(7) The representatives of the National Company and the Pacific Company and the representatives of the interested employees shall form a permanent Committee of Adjustment which shall meet from time to time when occasion arises for the purpose of enquiring into all matters in connection with the interpretation, application or enforcement of the provisions of this Schedule with respect to any such measure, plan or arrangement, and in the event that any dispute or difference arises in connection with any particular measure, plan or arrangement, including the interpretation, application or enforcement of any of the provisions of this Schedule, such dispute or difference shall be referred to such Committee which shall endeavour to bring about a settlement of the dispute or difference and to this end shall carefully enquire into all matters affecting the merits and right settlement thereof.

Section 8 provides that in the event of any dispute (except one in respect of compensation for losses incurred in the sale of a home or termination of a lease) if not settled within 30 days, is to be referred to a board of three arbitrators to be named, one by the representative of the employees, one by the companies and the third by the two so named, or in case the two arbitrators fail to name a third, by the Minister of Labour. This board is to have exclusive jurisdiction to inquire into and determine all matters arising from the dispute and its award, or the award of a majority of its members is to be final and not open to question or review in any court.

Organization of Permanent Committee

In pursuance of the above provisions there was a preliminary meeting in the Mount Royal Hotel, Montreal, on February 15, of general chairmen of interested employee organizations to select representatives to meet with a similar number of representatives of the Railways for the purpose of establishing in practical operation a Permanent Committee of Adjustment. At that meeting those elected to represent the employee organizations were: Messrs. J. B. Ward, W. H. Phillips, W. V. Turnbull, R. J. Tallon, A. J. Kelly; alternates—T. Todd, L. A. Beaudry.

Subsequently, on February 21, the representatives of both the Railways and the employee organizations met in Room 233, Windsor Station, Montreal, and duly constituted the Permanent Committee of Adjustment. The following representatives were present: For the Railways—Messrs. D. C. Coleman, N. B. Walton, H. C. Grout, A. J. Hills, George Hodge, W. M. Armstrong; For the Employees—Messrs. J. B. Ward, W. H. Phillips, W. V. Turnbull, R. J. Tallon, F. H. Hall, T. Todd. At this meeting, the names of officers appointed to represent the Railways was submitted as follows: Canadian National Railways—N. B. Walton, S. W. Fairweather, A. J. Hills; Canadian Pacific Railway—D. C. Coleman, H. C. Grout, George Hodge. Alternate representatives selected were: W. R. Devenish, Canadian National Railways; and W. A. Mather, Canadian Pacific Railway.

The meeting then elected the following officers to serve for one year: chairman, D. C.

Coleman; vice-chairman, J. B. Ward; secretary, A. J. Hills. There was also a sub-committee appointed to prepare draft regulations. This sub-committee comprised: Messrs. J. B. Ward, W. H. Phillips, George Hodge, and A. J. Hills.

Text of Regulations

The Permanent Committee held its second meeting on March 6, and after noting confirmation of appointments of its personnel, adopted its first regulations as follows:

1. The Committee shall be composed of twelve members, three of whom shall be officers of the National Company, three of whom shall be officers of the Pacific Company, and six who shall be elected representatives of the interested employees.

2. The appointment of the officers of the railways to this Committee shall be evidenced by letter from the Chief Executive of each railway to the Secretary of the Committee.

3. (*a*). The election of the reprsentatives of the employees shall be evidenced by certificate of the Chairman of a meeting of General Chairmen and other officers of railway labour organizations operating on the lines of the National and Pacific Companies, called for the purpose of electing such representatives.

(*b*) Eight representatives shall be elected, six of whom shall be regular, and two alternate members.

4. The officers of the Committee shall consist of a Chairman, Vice-Chairman and Secretary who shall be members of the Committee and elected by the Committee.

5. The Chairman, Vice-Chairman and Secretary shall serve for a term of one year from date of election. In case of vacancy, the position shall be filled for unexpired portion of term by the election of a member of the Committee.

6. The Chairman or Vice-Chairman shall preside at meetings of the Committee. All members of the Committee present are required to vote upon the adoption of decisions by the Committee.

7. A quorum shall consist of not less than eight members, four of whom shall be appointees of the railways and four who shall be elected representatives of the employees; but for the purpose of voting, when required, a parity of representation between the railway appointees and employee representatives shall be maintained.

8. The Committee shall meet from time to time upon call of the Chairman when occasion arises, as indicated in Section 7, Chapter 37, of the Act.

9. Alternate members may attend as members of the Committee in place of regular members.

10. (*a*) In event of a dispute arising out of the provisions of the Act, which has not been satisfactorily adjusted, and which involves interpretation, application or enforcement of the provisions of the Schedule to the Act such dispute or difference may be referred to the Committee.

(*b*) Parties making submission to the Committee should do so by filing 14 copies of their contentions and supporting papers with the Secretary, and one copy to the other parties to the dispute.

11. In each case an effort should be made by the disputants to present a joint concise statement of facts, but the Committee may require further evidence or other information in addition to such statement of facts, and for this purpose may call upon officers of the railways, or the recognized representatives of the Employees' Organizations or any other person as may be deemed necessary.

12. When a request for services of the Committee has been duly received, the officers of the Committee will arrange, as promptly as possible for a meeting of the Committee for purpose of giving consideration, and, if necessary, conduct hearings, and endeavour to bring about a settlement of the dispute or difference.

13. In hearings before the Committee, the railways shall be represented by such persons as may be designated by the railways, and the employees shall be represented by such persons as may be designated by authority of the duly authorized representatives of the classes of employees affected.

14. The Committee shall keep a complete and accurate record of all matters submitted, and disposition of same.

15. When the Committee has dealt with a request, dispute or difference, a report of its actions and findings in connection therewith shall be issued to the parties to the dispute or difference over the signatures of the Chairman, Vice-Chairman and Secretary.

An accident survey made recently at the Grand Coulee Dam reveals that the hour just before quitting time is the most dangerous to the workers on the project. The study shows that more accidents occurred between three and four p.m. than any other time of the day, the hour before the day shift leaves the project. The next most dangerous hour is shown to be between two and three p.m.

RECENT REGULATIONS UNDER PROVINCIAL LEGISLATION

Minimum Wages in Alberta, British Columbia and Quebec—Hours, Licensing and Old Age and Teachers' Pensions in Alberta—Exemptions from Licensing of Vehicles transporting Workers in British Columbia—Relaxation of Quebec factory legislation for munitions industry.

ALBERTA has exempted persons under seventeen working under the Youth Training Program from its blanket minimum wage order for male workers. In British Columbia the minimum wages for bus drivers on Vancouver Island and Saltspring Island have been increased and a new order fixes minimum rates for employees in private patrol agencies. There are several amendments in Order 4 of the Quebec Fair Wage Board which is continued in effect for another year as are the silk textile order and the order governing the milk industry in Montreal and district. The levy by-law and the rules of interpretation are amended. The order governing the manufacture of doors, sashes and wood building products has been suspended.

In British Columbia certain exemptions from the provisions of the Motor Carrier Act may be allowed vehicles transporting workers and Quebec permits exemptions for munitions factories from certain provisions of the Industrial and Commercial Establishments Act. There are amendments in the regulations governing teachers' pensions in Alberta and a new order in Alberta requires licensing of creameries with revised orders being issued for several other industries. Alberta allows seasonal exemption from the weekly rest day for cooks and barn bosses in certain types of camps.

Alberta Hours of Work Act

Order 12 gazetted on February 29 exempts from the provision for a weekly rest day from April 1 to October 31, cooks and barn bosses in construction camps and camps in connection with seasonal or intermittent highway construction.

Alberta Licensing of Trades and Businesses Act

Several orders of the Minister of Trade and Industry under this Act were gazetted on February 29. Persons carrying on the commercial creamery industry which includes the trade of making butter and cheese are now required to be licensed.

All the other orders supersede earlier orders and reduce the licence fees. These orders relate to the photo finishing industry, commercial printing, cleaning and dyeing, the barber trade and the automotive industry.

Alberta Male Minimum Wage Act

In an order gazetted March 15 the Board of Industrial Relations approved an additional exemption from the provisions of its blanket Order 8 (Labour Gazette, 1939, p. 674) which applies with exceptions to all male employees except farm labourers and domestic servants. Boys under 17 years serving a term of apprenticeship under the Youth Training Program are to be paid 25 cents an hour.

Alberta Old Age Pensions Act

The appointment of the Alberta Old Age Pensions Board (Labour Gazette, March, 1940, p. 243) became effective on April 1, 1940, by order in council gazetted on March 15.

Alberta Teachers' Retirement Fund Act

The by-laws of the Board of Administrators (Labour Gazette, March, 1940, p. 243), were amended by an order in council gazetted on March 15 to allow teachers who have served three or more years during the five years preceding the date when their contribution to the fund began to have such service taken into account for the purposes of the by-laws, whether or not they were under contract of engagement in Alberta on March 31, 1939.

British Columbia Male Minimum Wage Act

Order 70, effective on March 18, establishes new and higher minimum rates for bus-drivers on Vancouver Island and Saltspring Island than were fixed by the previous order covering this class of workers in Victoria, Esquimalt, Oak Bay and Saanich (Labour Gazette, 1935, p. 1010), which is now repealed. For a 40 to 50-hour week they are to be paid 50 instead of 45 cents an hour, for less than 40 hours the rate is raised from 50 to 55 cents and instead of 67½ cents the rate is now 75 cents for every hour in excess of nine per day or 50 per week. These rates now apply also to employees on call who are to be paid for not less than one hour's work when called. Other new provisions require the approval of the Board for terms under which deductions are made for clothing and the payment of wages at least semi-monthly.

Effective February 29 Port Grey district is added to the area covered by Order 12 of September 28, 1934, dealing with the construction industry, and by Order 58 relating to the

carpentry trade (Labour Gazette, 1938, p. 1095). The former order previously governed Vancouver, Victoria, New Westminster, Nanaimo, Prince Rupert, Esquimalt, Oak Bay, Saanich, West Vancouver, Burnaby and North Vancouver whereas Order 58 covered Vancouver, New Westminster, Burnaby, West Vancouver and North Vancouver.

An order which came in effect on February 5, and was gazetted on January 25, fixes a minimum wage of 35 cents an hour and allows a weekly rest period of 24 consecutive hours for employees of private patrol agencies who are not covered by any other order of the Board. "Private patrol agency" means every person who by contract or agreement undertakes to watch or patrol the premises of more than one person for the purpose of guarding or protecting persons or property against robbery, theft, burglary or other hazards. All wages due must be paid at least semi-monthly up to a day not more than seven days prior to the date of payment. The employer is required to supply necessary uniforms with no deductions from wages unless the Board approves a different arrangement on the written application of the employers and employees.

British Columbia Motor Carrier Act

Among the regulations under this Act gazetted on January 11 is one allowing the Public Utilities Commission to exempt passenger vehicles used exclusively for transportation of industrial workers to and from work from the provisions of the Act and the regulations requiring an applicant for a licence in respect of any such vehicle to pay certain fees. He may also be relieved of the necessity of furnishing proof of financial responsibility with respect to the vehicle. Industrial workers include those employed in the field or forest, in mines, mills or factories and such other occupations as the Commission may determine.

No motor carrier is to employ as a driver of a licensed vehicle any person who is intemperate, incompetent or otherwise unfit to be so employed.

Quebec Fair Wage Act

Two orders in council gazetted March 23 continue the general Order No. 4 (Labour Gazette, 1938, p. 513) and the silk textiles Order No. 5 (Labour Gazette, 1938, p. 1350) in force for an additional year from March 31 and April 1, respectively, unless contrary orders should be approved in the meantime.

Amendments in Order 4

To the grouping under Order 4 of wage earners occupying clerical positions for school boards were added, by order in council gazetted March 23, those employed in the same capacity by any other public corporation including syndics, fabriques, vestry-boards and church syndics. Regular office employees whose time is controlled by the employer are governed by the rules applying to that class while others are to be paid a minimum of one-half the rate fixed in the order for employees of public corporations generally working under conditions which do not permit their employer to control their time. By an order gazetted March 23 a change has been made in the area covered by Zone I of Order 4. It includes as before the City and Island of Montreal, but instead of covering also municipalities of cities or towns within a five-mile radius of the city it is now to apply to the cities of Longueuil and St. Lambert and the towns of Laprairie, Laval-des-Rapides and Terrebonne. Other zones remain as before.

As under the original order, the provisions having been repealed by an order which came in effect at the same time as Order 4 (Labour Gazette, 1938, p. 623), minimum rates are again fixed by an order gazetted March 23 for telephone operators in charge of switchboards with less than 100 lines. Throughout the province the minimum rate now fixed is 25 cents per line per month with a guaranteed monthly minimum of $5.

In connection with the levy on employers of one-third of one per cent of the salaries of employees coming under the provisions of the Fair Wage Act (Labour Gazette, 1938, p. 1096), a notice, gazetted March 16, requires report forms and the amount of the levy for the three month period January 1 to March 31, 1940, to be submitted on or before April 10. The levy must be paid on all wages paid to employees covered by an order of the Board with certain exceptions.

A rule of interpretation, gazetted March 16, relating to the levy by-law B1 establishes that when an employer has in the same establishment wage-earners governed by a decree or a collective labour agreement and not more than four employees covered by an ordinance of the Board, he is not liable to pay the levy provided that he submits an exact report of the names, addresses and wages of the employees at stipulated dates if requested to do so by the Board.

A resolution of the Board gazetted March 16 amends a previous resolution relating to sporting clubs (Labour Gazette, 1939, p. 1001). There is a general increase in minimum rates payable to building watchmen formerly entitled to the rates for bell-boys, porters and messengers, but now to receive the minima

fixed for day or night watchmen in industrial or commercial establishments.

An order in council gazetted March 16 renews the order relating to the milk processing and distributing industry in Montreal and district for 12 months from January 31 (Labour Gazette, 1938, p. 1097).

Order 24, dealing with the manufacture of sashes, doors and other wooden materials (Labour Gazette, 1939, p. 158) has been suspended indefinitely from March 3.

Quebec Industrial and Commercial Establishments Act

By an order in council gazetted March 23, exemptions from this Act to be made by agreement between the factory management and the labour inspector and approved by the Minister of Labour, are provided for industries manufacturing munitions or engaged in war contracts. Night work for women and young persons under 18 is still prohibited.

LABOUR LEGISLATION IN ALBERTA, ONTARIO AND NORTHWEST TERRITORIES, 1940

DURING the session of the Alberta Legislature which opened on February 8 and closed on February 16, a new law providing for the formation of building associations was enacted and statutes dealing with labour contract, unemployment relief and vocational training were amended.

Building Associations

The Building Associations Act, which will come into force on Proclamation, enables three or more residents of the Province to form themselves into an association for the purpose of promoting better housing. Such persons must submit to the Building Associations' Advisory Board, for which provision is made in the Act, a memorandum of association together with articles of association prescribing regulations and signed by the subscribers to the memorandum. The memorandum must state the name and address of the association, its objects, that the liability of members is limited, and particulars of the share capital, which may be divided into shares of a fixed amount, or shares without nominal or par value, or a combination of the two classes. If the Board approves the application the Minister of Trade and Industry, upon receiving from the applicants the prescribed fees and a deposit of $1,000, may authorize the registration of the association and issue a certificate of incorporation, entitling it to obtain applications for shares from the public, subject to the terms of the memorandum and articles and the provisions of the Securities Act. The memorandum and articles when registered, are binding upon the association and all its members.

The Minister, when satisfied that at least $10,000 of the capital stock has been subscribed and fully paid up, may authorize the Registrar of Joint Stock Companies to issue a certificate entitling the association to commence business, and when it is issued he is to return the deposit of $1,000. Until such certificate is issued the association may not allot shares, do business or exercise any borrowing powers. If the association fails to secure the stipulated minimum amount of paid-up capital within six months from the issue of the certificate of incorporation, the Minister is to direct the cancellation of the certificate and return the deposit to the applicants, after satisfying himself that all subscriptions have been returned to the subscribers.

The maximum rate of interest on preferred shares is 5 per cent and on debentures 3 per cent. When common shares are issued they are to be allotted to the holders of preferred shares and purchasers of debentures in amounts equal to the capital value of such shares and debentures. An association must establish a reserve fund into which is to be paid annually the surplus earnings after providing for interest on debentures, dividends on preferred shares and payments into the sinking fund. The reserve fund when not required for capital purposes may, with the Board's approval, be distributed as dividends to holders of common shares.

The Lieutenant-Governor in Council, on recommendation of the Minister, may authorize the Provincial Treasurer to guarantee payment of principal and interest of the debentures of an association. The conditions of such guarantee are that the association must undertake to employ Alberta labour exclusively, and Alberta materials where suitable; the amount of debentures guaranteed for any one association may not exceed at any time four times the amount of the outstanding paid-up capital stock; the debentures shall be a first charge upon the assets of the association and be issued for a term not exceeding 20 years; such debentures shall be issued through the branches of the Provincial Treasury and be payable as to principal and interest at the Treasury Branch nearest the office of the association or such

other branch as the Provincial Treasurer may direct; the association shall make provision satisfactory to the Provincial Treasurer for a sinking fund for redeeming the guaranteed debentures as to principal and interest as they become due; the total amount of the liability of the Province as guarantor may not exceed $1,000,000.

Except with the approval of the Board, no association may build housing properties having a value, including land, exceeding $3,500. When such properties are sold otherwise than for cash the agreement between the association and the purchaser, unless otherwise approved by the Board, must require a cash payment of at least 20 per cent and the balance in instalments at least quarterly, the entire purchase price being repaid as to principal and interest within 20 years. The rate of interest on unpaid balances may not exceed 4 per cent.

Amendments to the memorandum and articles of association must be approved by the Board and filed with the Registrar and every association must appoint an auditor approved by the Minister and must file an annual return with the Board and the Registrar. The Board must make an annual report to the Minister and on his order must inquire into and report upon the affairs of any association. Actions against members and employees of the Board in respect of anything done under the Act are barred. The Lieutenant-Governor in Council may make regulations prescribing the terms and conditions of contracts or agreements for sale of housing properties erected by associations under the Act, the forms to be used by associations, the maximum margin over costs which may be added by an association in the sale of such properties, and authorizing the Board to administer and liquidate associations in default.

Labour Contract

The Masters and Servants Act was amended to enable an employee to sue his employer for an amount not exceeding six months' wages instead of two months' wages, as formerly, and to extend the time limit for taking action to six months from termination of employment.

Unemployment Relief

The Unemployment Relief Act, 1933, which enables the Provincial Government to make agreements with the Government of Canada concerning relief measures, was continued in force until March 31, 1941.

An amendment in the Municipal Improvements Assistance (Alberta) Act is retroactive to the commencement of the principal Act and affects the section requiring a municipality whose borrowings under the Act are guaranteed by the Province to convenant for the placing of certain revenues in a trust fund for repayment of the loan. The amendment provides that this section shall not apply in any case where the municipality has debentures outstanding constituting a first charge or lien upon the revenues from the project in respect of which application is made for a loan, provided debentures of the municipality are to be delivered to the Minister of Finance which will rank pari passu with the outstanding debentures. Neither is the section to apply in any case where the municipality gives the Provincial Treasurer a first mortgage upon the project to be constructed or improved out of the proceeds of the loan.

Vocational Education

The School Act was amended to authorize any two or more school boards, with the approval of the Minister of Education, to enter into an agreement to provide instruction in shop courses, household economics, music, art or commercial work. Formerly, only boards in districts having 75 or more pupils above grade V might make such agreements.

Pensions

An amendment in the Income Tax Act exempts from tax one-tenth of any lump-sum payment made by an employer to an employees' superannuation or pension scheme for each of the first ten years after its establishment, provided such sum is irrevocably charged for the benefit of the scheme. In the case of a lump-sum payment already made, in the year 1935 or later, a deduction will be allowed for ten successive years beginning with 1939.

The Calgary Charter was amended to enable the city to enter into an agreement with the Board of Trustees of the Calgary School District and with the Calgary Roman Catholic Separate School District to include employees of those boards, other than teachers, in the Pension Fund for City Employees, established by By-law No. 3016 and amendments. The school boards are authorized to perform their part in the agreement without submitting the proposal to the ratepayers. From the execution of the agreement all present employees of the school board concerned, regardless of age, and future employees within the age limits prescribed by the by-law, are to be included in the pension scheme and liable to have their contributions to the fund deducted from wages. Under the agreement each of the school boards may undertake to pay the City, in addition to contributions from employees, a monthly amount for the purpose of the pension fund equal to 2½ per cent of the

payroll of employees pensionable under the agreement and in the case of future employees the same percentages of wages as are paid by the city under its by-laws. In addition the Boards are to pay a proportion of the administration expenses, based on the number of employees, and interest on the accrued liability calculated at the rate of 4½ per cent per annum. This latter payment is to be reviewed quinquennially. An agreement between the city and the boards may contain any provision which may be agreed upon by the parties provided it is not inconsistent with this amendment to the Charter.

Ontario

The Ontario Legislature which met on January 10 and was prorogued on February 24, amended statutes dealing with trade schools, advance polls for employees and unemployment relief and revised the law relating to credit unions.

Trade Schools

The penalty sections of the Trade Schools Regulation Act were extended to cover persons who sell or offer for sale trade-school courses which have not been approved under the Act. The penalty for this offence and for keeping a trade school not registered under the Act, teaching a trade not specified in the certificate of registration or making a contract to give instruction in a trade other than the contract set out in the Act or a contract approved by the Minister, is now a fine not exceeding $1,000 for a first offence and $2,000 for a second or subsequent offence and in either case, in default of payment of the fine or in addition to the fine a prison term not exceeding six months. In the case of a company the fine may be increased in the discretion of the magistrate to a sum not exceeding $25,000. Penalties may be recovered as provided by the Summary Convictions Act. Formerly the penalty was a fine of not less than $100 and in default of payment a prison term not exceeding six months.

Unemployment Relief

Under an amendment to the Unemployment Relief Act, 1935, an unemployment relief administrator or any assistant to such an administrator may not be removed from office, except with the approval of the Minister of Public Welfare.

Mediation in Labour Disputes

An amendment in the Ontario Municipal Board Act repealed a section, first enacted in 1906, which required the Board to endeavour to settle by mediation any dispute between a railway or public utility and its employees.

Advance Polls

The Municipal Act was amended to give bus and transport drivers the right to vote at advance polls in municipal elections.

Pensions

An amendment in the Income Tax Act is similar to that made in the corresponding Alberta statute and outlined above, except that deductions are allowed, beginning in 1939, in respect of any payment heretofore made instead of only on those made in 1935 or later, as in Alberta.

Credit Unions

The Credit Unions Act is a consolidation of existing legislation with amendments designed to bring it more into line with similar Acts in other provinces. The Act provides for the incorporation of credit unions having for their object the receiving of moneys on deposit from members and as payment for shares and the making of loans to members, with or without security, for provident and productive purposes.

Application for incorporation must be made by not less than twenty persons who must sign a memorandum of association in prescribed form and forward it, with a copy of the by-laws, to the Registrar of Credit Unions, whose appointment is authorized by a new provision of the Act. If the Minister in charge of carrying out the Act approves the memorandum he is to issue a certificate of incorporation which, with the by-laws and the Credit Unions Act, is to constitute the charter of the credit union. Under a new section membership is limited to persons having a common bond of occupation or association or to persons within a well defined neighbourhood or community. Matters to be dealt with in the by-laws of a credit union include the purposes for which profits may be appropriated, the maximum number of shares which may be held by, and the maximum amount which may be deposited by, or loaned to, a member, expulsion and withdrawal of members, forms to be used, and such other matters as may be authorized by the regulations. All by-laws and amendments thereto must be approved by the Minister and are then binding upon every member and every person claiming through a member. A copy must be delivered by the union to any member, on payment of the sum fixed by the by-laws.

The capital of a credit union is to be divided into shares as determined by the by-laws, but not exceeding $10 each and may be increased by subscriptions for new shares or admission of new members and diminished by withdrawals. A corporation may hold shares, if its instrument of incorporation permits, but the union may not make loans to such corporation without the consent of the Minister. No member may have more than one vote and voting by proxy is only allowed in the case of an agricultural association, municipal body, school board or other corporation. Subject to the by-laws, a person under 21 years of age may be admitted to membership but may not be a trustee, manager, treasurer or a member of the board of directors, credit committee or supervisory committee. A credit union must keep a register of members and shares and has a lien on the shares of any member for a debt due it by him. At least 20 per cent of its yearly net profits, instead of 10 per cent as formerly, is to be set aside as a reserve fund against uncollectable loans and debts. Provision may be made by by-law that after payment into the reserve fund and before declaration of a dividend an amount not exceeding 5 per cent of net earnings may be set aside for educational purposes. A credit union may not advance money to, nor accept deposits from, persons other than members. No officer or member of a committee or of the board of directors may have on loan an amount in excess of the aggregate of his fully paid-up shares and deposits unless such loan is approved by a two-thirds majority at a joint meeting of the board and the credit committee. Interest, together with all charges and penalties, may not exceed 1 per cent per month on the unpaid balance of any loan.

A credit union is to be governed by a board of directors of at least five members, a credit committee of at least three members and a supervisory committee of three members. A member of one of these committees may not be a member of the other committee and no member of either may be a director or officer. All payments to the officers for services must be approved by the board of directors. A new provision requires every officer who has charge of money to furnish a bond in such amount as the board of directors may determine.

The duties of the directors are such as may be prescribed by the Act and regulations and by the by-laws of the credit union, and the credit committee is to consider applications for loans. The supervisory committee is responsible for examination and audit of the books and the checking of investments and securities of the union and must submit a written report to the annual meeting. Where there is a misappropriation of funds or a contravention of any of the by-laws, this committee must call a general meeting and meanwhile may suspend any director or officer or any member of the credit committee and appoint a member of the credit union to perform the duties of such person.

By resolution of the directors a union may borrow money up to 50 per cent of its combined capital, deposits and surplus, but in the case of borrowings of over 25 per cent the resolution must be confirmed by a vote of not less than two-thirds of the members present or represented at a meeting called for its consideration or by unanimous sanction of the members, given in writing.

Upon application of one-tenth of the members, of a credit union, or of one hundred members in the case of a union with a membership of more than one thousand, the Minister may direct the Inspector of credit unions who is to be appointed under the Act, to examine into and report upon the affairs of the union or may call a special meeting of the union. The applicants may be required to furnish security for the costs of the inquiry or meeting which are to be defrayed by the applicants or from the funds of the union or by any officer or member or any former officer or member, as the Minister may direct. A credit union must furnish a yearly statement to the Inspector and any other information he may require.

Provision is made for federation of credit unions and for their dissolution for cause and the Lieutenant-Governor in Council is authorized to make regulations for their management and control. Except as otherwise provided, the Act applies to societies incorporated under the Co-operative Credit Societies Acts, 1922, and amendments, as well as to those incorporated under the new statute.

The Securities Act was amended to exempt from registration under the Act, the shares of a credit union within the meaning of the Credit Unions Act, 1940.

Bill Not Passed

A Bill to amend the Workmen's Compensation Act, which was introduced but failed to pass, would have allowed appeals to the Supreme Court of Ontario from decisions of the Workmen's Compensation Board.

Northwest Territories

The Workmen's Compensation Ordinance, which was assented to March 11, 1940, repeals the Compensation to Families Ordinance, and the Workmen's Compensation Ordinance. The new measure which is chiefly a consolidation of these two ordinances enables an action for damages to be brought on behalf of the consort, parent, child, brother or sister of any person whose death has been caused by a wrongful act, neglect or default which would have entitled the injured person, if death had not ensued, to maintain such an action. The defence of a common employment is abrogated. "Parent" includes a grandparent and a step-parent and "child" includes a grandchild and a step-child. The action must be instituted within 12 months of death and not more than one action may be brought in respect of the same subject of complaint. A new section provides that when a workman or his dependants are entitled to compensation under the law of any other province or territory they are not entitled to sue under this Ordinance.

LEGISLATION IN NOVA SCOTIA PROPOSED BY TRADES AND LABOUR CONGRESS PROVINCIAL EXECUTIVE

REPRESENTATIVES of the Nova Scotia Executive of the Trades and Labour Congress of Canada and of the Halifax District Trades and Labour Council presented to the Nova Scotia Government on March 1 recommendations for certain changes in the labour laws of the province.

In connection with the Workmen's Compensation Act it was urged that medical aid should be provided during the full period of disability instead of, as the present law requires, for only 30 days or such further period as the Board deems necessary, that compensation should be based on the workmen's regular earnings for a full-time week at the time of the accident, that a minimum pension of $12 a week be paid in case of disability regardless of earnings, that in permanent partial disability cases the exent of the disability should be estimated and compensation paid throughout the workman's life, that workmen should be supplied with artificial teeth and with glasses when required as a result of an accident and that a workman should be allowed 12 months in which to make a claim for compensation and 15 months to establish it.

It was recommended that the Apprenticeship Act should be amended to fix 21 years as the maximum for beginning an apprenticeship. The Minimum Wage for Women Act should be amended, in the opinion of the labour organizations, to provide that for work which is ordinarily and by custom done by women, no male worker should be employed at a lower wage than that fixed for female workers. It was also urged that inspectors should be appointed to enforce the minimum wage orders and that the Limitation of Hours Act should be made effective. This Act was enacted in 1935 to provide for the regulation of hours in industrial undertakings by a board of adjustment but has never been put in force. A fair wages policy in connection with Government contracts was requested so that wages and hours should be regulated on all Government works and on works aided by Government subsidy either on land or water. In the lumber industry the Government was asked to fix a minimum wage of 40 cents and to apply this rate to other industries. The Industrial Standards Act, the labour organizations consider, should be applied to all industries in the province except farming and mining instead of being confined to the building trades in Halifax and Dartmouth.

Regulations were urged for the protection of persons employed in compressed air and governing the installation of heating systems so that only men with proper qualifications should be allowed to install them. The Government was requested also to appoint inspectors for steam boilers and other pressure vessels and for the construction and transportation industries as well as for electrical work. It was recommended that electrical supply and utility companies should be prohibited from doing inspection work and that the sale of electrical supplies should be placed under the control of the Nova Scotia Power Commission.

Certain amendments were requested in the Nova Scotia Trade Union Act. It was proposed that the Act should require an employer to recognize, bargain and sign an agreement with the members of any given craft of the industry in which the men are employed if the craft union is the choice of the majority of the workmen eligible for membership in it. The definition of a trade union should be changed by adding that the association "shall be free from undue influence, domination, restraint or interference by employers or associations of employers." A change proposed in the section providing a penalty for an employer who, by intimidation, threat of loss of position or employment or by actual loss of position or employment or by threatening or

imposing any pecuniary penalty, prevents or tries to prevent an employee from joining or belonging to a trade union, would extend the section to an employer who encourages or discourages an employee in forming a trade union. It was also requested that the Act should make provision for the check-off system not only in industries in which it is actually in operation but also in connection with all unions organized under the Act. The requirement that trade unions must make annual financial returns to the Provincial Secretary should be repealed.

The delegation urged the extension of the Mothers' Allowance Act to provide for the payment of an allowance to a mother of one child instead of only to the mother of two or more children.

Attention was drawn to the need for regulation of commercial motor vehicles and to the recommendations of the Dominion-Provincial Conference on December 13, 1935. One resolution of the Conference recommended legislation limiting the hours of labour and fixing minimum wages of drivers of passenger and goods vehicles.

Legislative Recommendations of District 26, United Mine Workers

Executive officers of District 26, United Mine Workers of America, presented before the Hon. A. L. Macdonald, Premier of Nova Scotia, and his Cabinet on March 14 their program of proposed labour legislation.

Featuring the requests were amendments to the Coal Mines Regulation Act, urging: (1) that coal leases be not granted to any operator until such pay the standard rate of wages; (2) the establishment of the six-hour day; (3) cancellation of leases held inoperative for speculative purposes; (4) inspection of washhouses *re* sanitary conditions. Other recommendations concerned daily inspections of ropes and brakes, and wage deductions for coal and rent.

Increases were sought in the amounts payable to persons entitled to claims under the Compensation Act. It was asked that compensation be payable on a maximum rate of $2,000 instead of $1,500 per year, as at present.

Other changes were sought, such as making it compulsory on the part of the employer to report all accidents in which an employee is involved; increasing the minimum compensation payments from $8 to $12 per week; increasing widows' allowance from $30 to $50 per month and dependent children's payments to be increased from $7.50 to $10; that employees receive compensation for destruction of artificial teeth or limbs and payment of compensation for lung diseases such as silicosis, anthracosis, etc.

A tripartite contributory old age pension scheme was also recommended on a basis of 45 per cent each to be contributed by the employer and government and 10 per cent by the employee. The proposed monthly rate to be paid was placed at $50 for married men and $40 monthly for single men.

Extensive study of "Miners' Asthma", with an appeal for increased hospitalization for persons suffering from tuberculosis was also recommended.

Among other recommendations were:

Amendment to the Trade Union Act, so as to apply the check-off for union dues to include all trade unions under this measure.

Appointment of a Commission to enquire into the employment of young men and women in the province with the Government, industry and labour represented thereon.

Enactment of unemployment insurance legislation with unemployment insurance to be paid to unemployed and those partially employed.

Labour representation on all Boards or Commissions which deal with matters affecting the workers.

Free school books in all school grades including high school.

That the Government enter into a housing scheme with the Federal Government with a view to erecting more modern homes for the working people; such homes to be sold to the workers at actual cost, spread over a 20-year period with no interest charges.

Employment and Pensions on Canadian National Railways

The annual report of the Canadian National Railway System for the year ended December 31, 1939, shows that the average number of employees was 78,129 compared with 74,953 in 1938, an increase of 4·24 per cent in average personnel during the year. Total payroll in 1939 amounted to $122,354,101 in 1939 compared with $116,526,108 in 1938, an increase of 5 per cent.

The expenditure on account of pensions during 1939 also increased to $4,244,840.85 compared with $4,022,809.42 expended for this purpose in 1938.

APPRENTICESHIP IN CANADIAN NATIONAL RAILWAY SHOPS

THE Canadian National Railways maintains an extensive system of apprenticeship in its railway car shops, roundhouses and car repair and running yards under the direction of a General Supervisor of Apprentice Training with headquarters at Montreal. Training is given for 11 different trades: machinist, boilermaker, blacksmith, pipefitter, electrical worker, sheet metal worker, carman, painter, upholsterer, moulder and patternmaker. The number of apprentices taken on each year varies according to the number of workmen likely to be required on account of the retirement, death or promotion of men in these crafts but the ratio of one apprentice to five craftsmen is never exceeded.

The General Supervisor consults with the General Superintendents of Motive Power and Equipment in the Atlantic, Central and Western Regions and with the regional supervisors and examiners and the shop and class instructors concerning problems of policy and methods. Periodical inspection is made and an individual file is kept by the General Supervisor for each apprentice including quarterly reports on his work in the shop, examination papers and semi-annual increases in pay.

Apprenticeship is by indenture for five years, 290 days constituting an apprenticeship year. The indenture is signed by the parent or guardian and by the employing officer of the company. On completion of the course, which gives thorough training in all branches of a craft as well as technical training in mathematics, mechanical drawing and trade theory in which subjects annual examinations are conducted, an apprentice is credited with two years' seniority. Wages are paid to apprentices in accordance with the agreement between the shop crafts organization and the company. One dollar a month for 10 months each year is deducted from an apprentice's wages to pay for his text books but to any apprentice making an average of 75 per cent or over in the three subjects, 50 per cent of the amount deducted is returned on completion of his apprenticeship.

An applicant for apprenticeship must be a public school graduate between 16 and 21, in good health, able to work without glasses nd must have good hearing. He is required to pass a physical examination by a company doctor and an educational test equal to high school entrance in arithmetic and composition. A certificate must be submitted from the school principal showing the subjects taken in the last year in school and the marks obtained. Before his application is considered the youth must be interviewed by the employing officer who is Superintendent of Shops. The latter's approval is required before an apprentice may be suspended. If an apprentice does not make sufficient progress in his training or if in the interest of discipline the Shop Superintendent considers an apprentice should be dismissed, an investigation must be made by the regional supervisor and examiner and his dismissal approved by the General Superintendent of Motive Power and Car Equipment of whose department the General Supervisor of Apprentice Training is an officer.

An apprentice attends classes for two hours a week in company time, 500 hours in all, and is expected to spend at least two hours of his own time in study each week. There are from 10 to 15 pupils in a class. Courses are selected from the company's regulations governing shop practice and from text books used by the International Correspondence Schools and the railway equipment companies. Service men from the latter companies and inspectors of the American Association of Railroads are asked to give lectures to apprentices. Special emphasis is placed on the Association's rules and safety appliances for carman apprentices, acetylene welding and instructions for electric welding. Efforts are made to impress on apprentices the importance of safety. Copies of the company's safety rules are supplied and apprentices are examined on them soon after entering the service. Goggles are provided and apprentices are encouraged to wear clean and safe apparel.

Shop training is given by a special instructor in each of the motive power and car shops, a certain amount of time being allotted to each branch of the trade. For example, a machinist's apprentice spends from 12 to 16 months on different kinds of lathe work, 12 to 14 on other machines, 12 to 15 on different bench and floor fitting including training in oxy-acetylene and electric welding and from 12 to 15 months on general erecting fitting on locomotives. In the last year some apprentices are given nine months in roundhouse fitting. After four years of general training, if the apprentice shows special aptitude for a particular part of the trade, he is given more advanced training in that line. Apprentices in electrical work spend 12 months on shop maintenance and electrical repairs, six months on locomotive and tender wiring and headlights, 24 months on general car lighting, air conditioning, batteries and Diesel engines, 12 months on armature winding and six months in coach yards on car lighting and air-con-

ditioning work. Similarly, apprentices in the other trades are moved through the different branches according to a definite schedule.

Progress reports at the end of the allotted time in each branch of work are made by the foreman and by the shop instructor. Marks are allowed for punctuality, initiative, discipline and ability. A record is kept of the number of hours worked during apprenticeship. Time lost by an apprentice on his own account must be made up before he receives his wage increase and time lost due to the closing down of the shops is made up at the rate payable for the last period of apprenticeship. At the completion of apprenticeship, a report, based chiefly on the average marks in both shop training and class work is made to the General Supervisor of Apprentice Training and the General Superintendent of Motive Power and Car Equipment. The Company is thus enabled to pick out those with the best record and the successful apprentice is given a certificate of his competence in the trade.

Apprentices with outstanding ability may be given leave of absence to attend university for training in engineering. The Company considers that those who have taken the combined apprenticeship and university training are better qualified for promotion to the higher supervisory positions.

State Legislation in U.S.A.

In an article dated March 12 appearing in *Labor Standards* published by the United States Department of Labor, a review is given of the legislative action being taken in seven states whose legislatures were in regular session at that time. The legislature of California was also in special session and the article stated that special sessions of the Louisiana and Nebraska legislatures had adjourned without enacting any labour legislation while the legislature of New Jersey was recessed.

At the time the article was prepared three states—New York, South Carolina, and Rhode Island—had introduced bills proposing the ratification of the Child-Labor Amendment. New Jersey and Virginia were considering bills to raise the minimum age for employment from 14 years to 16 years.

Two states—New Jersey and New York—were considering bills relating to wages and hours patterned after the Fair Labor Standards Act of 1938. The New Jersey bill was reported favourably in the House in January and amended so that it now exempts employers covered by this federal act, and charity hospitals.

Mississippi, the only state which does not have a workmen's compensation law (the Arkansas law, however, is inoperative) had introduced a bill providing an elective workmen's compensation law covering employers of eight or more.

Another Mississippi bill provided for the establishment of a Department of Labor, with rule-making power for health and safety. The article stated that the Labor Committee in the House had, however, reported a substitute bill which greatly limits the powers of the department by requiring the inspectors to notify the employer before entering the plant for inspection, and by requiring the Secretary of Labor to secure an injunction in order to stop the operation of dangerous machinery. It also enlarges the courts' powers in reviewing safety and health codes. A Kentucky bill provides for the extension of the functions and duties of its Department of Industrial Relations, providing among other things for an apprentice-training system under the department, for wage collection and for rule-making power for health and safety.

The industrial peace bill, drafted by a special Labor Relations Commission in Virginia, had been introduced, creating machinery in the Department of Labor for mediating labor disputes, and requiring notification of contemplated changes or demands, and a waiting period before strikes or lock-outs. Another bill provided only for mediation and voluntary arbitration through the Labor Commissioner and through temporary arbitration boards. New Jersey was considering several types of bills dealing with industrial relations, including a bill modelled on the Wagner Act.

The New York Legislature was considering a number of bills suggested by the Joint Legislative Committee on Industrial and Labor Relations (the Ives Committee) amending the State Labor Relations and Mediation Boards Act.

The Kentucky State Labour Department bill contained a section enacting a state Labor Relations Law, similar to the Wagner Act, and vesting its administration in the labor commissioner. Rhode Island was considering a similar bill.

ANALYSIS OF MATERIAL AID STATISTICS FOR 1939

REVISED figures now available from the National Registration of persons on Aid to which the Government of the Dominion contributes show that in the final month of last year the aggregate number of persons receiving either Urban or Agricultural Aid was 629,246 compared with 896,477 in December, 1938, 956,924 in December, 1937, and 1,115,309 in December, 1936. In this comparison, the decreases to December, 1939, from the three preceding Decembers were 29·8 per cent from 1938, 34·2 per cent from 1937, and 43·6 per cent from 1936.

Persons on Urban Aid (including fully employable, partially employable, unemployable and non-worker type dependents) stood at 556,676 in December, 1939, which was a decrease of 7·9 per cent from the figure of 604,666 in December, 1938, and was lower by 4·1 per cent than the December, 1937, total of 580,341, and 30·9 per cent less than the 805,357 in December, 1936.

Persons on Agricultural Aid (farmers and their families) numbered 72,570 in December, 1939, showing substantial decreases from the 291,811 in December, 1938, and 376,583 in December, 1937, and a reduction from 309,952 in December, 1936. Thus, numbers on Agricultural Aid in December, 1939, were less by 75·1 per cent than in December, 1938, by 80·7 per cent than in December, 1937, and by 76·6 per cent than in December, 1936.

Fully Employable (but unemployed) among those on Urban Aid numbered 146,866 in December, 1939—decreases of 9·5 per cent and 4·6 per cent compared with the 162,331 in December, 1938, and 153,918 in December, 1937, and a substantial decrease of 38·2 per cent from the December, 1936, total, which was 237,694.

Explanatory Notes re Tabular Statistics

The tables which follow provide a resumé of numbers of persons on Material Aid throughout Canada in the year 1939, as derived from the National Registration, with some comparisons with figures pertaining to the year 1938. Material Aid refers only to direct relief, so that in the sense here used the term does not include persons being provided with work on relief projects paid for at wages, even though such work was undertaken to alleviate unemployment. Material Aid is divided into Urban Aid and Agricultural Aid. Agricultural Aid refers to assistance given to resident farm operators and their dependents for human subsistence, where such farmers would normally derive their livelihood from the land which they occupy. Urban Aid refers to all persons other than farm operators and their dependents, and thus includes the unemployed and unemployable persons. "Head of Family" is used to designate a person who is socially responsible for the support of one or more dependents. An "Individual Person" is one who is neither a dependent of a head of family nor has any one dependent upon himself. The term "wife" refers to the member of a family unit who performs the housekeeping duties and "wives" are a sub-classification of dependents. "Dependents" are all who look to the head of a family for their support and, thus, "dependents" include some adult employable persons still living under the parental roof.

Subsequent to April 1, 1937, the Province of New Brunswick had substituted a works program for Material Aid, and consequently that province does not contribute to the Registration totals on Material Aid as shown in these tables. Moreover, in the case of all provinces the present figures include only persons receiving Aid to which the Government of the Dominion contributed financially.

The tables in Group A—*Numbers of Persons on Material Aid*—relate to the main outlines of the problem. Table I shows a monthly average of 808,040 persons on Material Aid across Canada in 1939, of whom 72·8 per cent were on Urban and 27·2 per cent on Agricultural Aid; the comparable monthly average for 1938 was 870,103, of whom 64·1 per cent were on Urban and 35·9 per cent on Agricultural Aid. Table II shows the percentage distribution by provinces of the average monthly number on Urban Aid, the average monthly number on Agriculture Aid, and the average monthly number on Material Aid (i.e., Urban and Agricultural Aid combined) in the years 1939 and 1938. Table III gives an analysis of the Dominion totals for the month of December, 1939, showing a distribution by provinces and by the main domestic classifications. It may be noted that within each class of Aid, i.e., Urban and Agricultural, the numerical relationship of the number of dependents to the number of heads of families remains virtually constant month after month. Table IV separates each of the groups "Heads of Families" and "Individual Persons" on Urban Aid in December, 1939, into Fully Employable, Partially Employable and Unemployable. While the percentage division of heads of families and individuals varies materially from month to month when the volume of employment is fluctuating, due to the absorption of fully employable persons into employment, or due to the reverse process, a comparison of the Decembers in 1939 and 1938 in the case of family

heads and individuals from this point of view does not show any major relative change:

	Heads of Families				Individual Persons			
	Total	Fully Employable %	Partially Employable %	Unemployable %	Total	Fully Employable %	Partially Employable %	Unemployable %
December, 1939 ..	119,202	78·6	11·3	10·1	44,704	48·5	25·3	26·2
December, 1938 ..	132,482	80·0	11·2	8·8	45,804	53·0	25·1	21·9

Table V provides a classification of dependents of heads of families on Urban Aid in December, 1939, from the viewpoint of employability and non-employability.

The tables in Group B—*Fully Employable Persons on Urban Aid*—relate to those persons who are reported by the local authorities issuing Aid as fully employable, that is to say, to the unemployed on Aid. The separation on degree of employability is made in respect of persons in receipt of Urban Aid only, as resident farm operators and their dependents on Agricultural Aid are not seeking industrial employment, and are the victims of distress due to climatic or other conditions quite apart from unemployment or unemployability. For the purposes of this employability classification the following domestic categories are considered as available for employment, if reported fully employable by local authorities: heads of families, individual persons and dependents (other than wives) 16 years of age and over. Table VI shows that in 1939 the average monthly numbers of fully employable persons unemployed on Aid throughout Canada were 156,780, of whom 126,922 were males and 29,858 were females; in 1938 the monthly average total was 148,289, of whom 119,358 were males and 28,931 were females. Table VII shows the distribution by provinces in December, 1939. Table VIII shows a separation by percentage distribution of fully employable persons on Aid in December, 1939, by age groups, with a comparison for December, 1938. Table IX shows a separation of the fully employable persons by occupational groups in December, 1939. Table X makes comparison of the distribution of fully employable persons by industry of last normal employment in December, 1939 and 1938.

Group C—*Persons on Aid in Cities*—consisting only of Table XI, shows total numbers of persons (of all domestic categories) and total numbers of fully employable persons only, on Aid in cities of over 25,000 population in December, 1939, with averages for the years 1939 and 1938. The columns "Fully Employable Persons Only" thus represent, in each respective column, a portion of the persons shown under "Total Persons on Aid."

EMPLOYMENT AND UNEMPLOYMENT IN CANADA, FEBRUARY, 1940

THE accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on March 1 was 11,899, the employees on their pay-rolls numbering 1,109,443 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for February was 2,000 having an aggregate membership of 254,805 persons, 11·7 per cent of whom were without employment on March 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from 70 centres in which the Employment Service of Canada is situated, showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of March, 1940, as Reported by Employers

Returns tabulated by the Dominion Bureau of Statistics from 11,899 employers throughout Canada show that there was a slight slackening in industrial employment at the beginning of March, marked improvement in manufacturing being offset by shrinkage in some of the non-manufacturing industries, notably logging, for which the active season in many districts is drawing to a close. The reported staffs of the co-operating establishments aggregated 1,109,443, compared with 1,118,003 at February 1. This decrease of 8,560 employees slightly lowered the unadjusted index number from 114·4 at February 1 to 113·5 at March 1, when it was higher than in any other March for which statistics are available; at the same date in 1939, the figure had been 106·5, while at March 1, 1929, the previous maximum in the record of twenty years, it was 111·4. These indexes are calculated on the 1926 average employment of the reporting firms as 100.

In the period, 1929-1937, upon whose experience the seasonal variation factors are calculated, the trend at March 1 was very slightly downward; the reduction at the latest date rather exceeded this average decrease, with the result that the seasonally-corrected index fractionally declined, falling from 118·8 at the beginning of February, to 118·3 at March 1, 1940. This was the highest adjusted figure for that date in the twenty winters for which statistics are now available.

Considerable improvement was reported in manufacturing at March 1, 1940, when employment was at a higher level than in any other month of the record. The index (1926=100) stood at 122·6, compared with the 1939 high of 122·2 at December 1, and 122·1 at November 1, while the previous maximum figures were those of 121·7 at October 1, 1937, and 121·6 at August 1, 1929. The advance in manufacturing at the latest date was rather greater than the average at the beginning of March in past years, and largely exceeded that recorded at March 1 of last winter. The most pronounced increases from February 1, 1940, were in textile and iron and steel factories, but there were also important gains in tobacco and non-ferrous metal products. Among the non-manufacturing industries, logging, mining, transportation, construction and maintenance and trade showed reduced activity; the losses, mainly of a seasonal character, were most pronounced in the logging and construction divisions, the numbers released by the employers co-operating in these classes being 14,179 and 3,222, respectively. On the other hand, services reported improvement.

For March 1, 1939, statistics had been received from 11,309 employers with a combined working force of 1,027,846 persons; the index was then lower by seven points than that of 113·5 at the latest date. On the basis of a comparison of the index numbers for March 1, 1939 and 1940, it may be estimated that the co-operating establishments employed nearly 69,000 more persons at the latter than at the former date.

The unadjusted index numbers of employment at March 1 in the years since 1927 are as follows:—1940, 113·5; 1939, 106·5; 1938, 107·8; 1937, 102·8; 1936, 98·9; 1935, 96·4; 1934, 92·7; 1933, 76·9; 1932, 88·7; 1931, 100·2; 1930, 110·2; 1929, 111·4 and 1928, 102·6.

Employment in Financial Organizations

For some months, statistics of the employment afforded have been collected from banks, trust companies and stock exchange firms. At the beginning of March, 410 firms and branches in these lines of business reported staffs aggregating 33,458 persons, compared with 33,479 in the preceding month. The addition of these figures to the returns furnished in the manufacturing, logging, mining, transportation, communications, construction, services and trade industries brings the total number of employees included in the March 1 survey of employment to 1,142,901 in 12,309 establishments, and slightly lowers the index of 113·5 in the industries above enumerated, to 113·4; when the employees of the co-operating financial institutions were added to the general figures for February 1, the index was lowered from 114·4 to 114·3. Comparable data for 1939 are not available.

Employment by Economic Areas

The trend at the beginning of March was upward in Prince Edward Island, Nova Scotia and British Columbia, while activity declined in the remaining provinces, the losses being mainly of a seasonal character. Firms in Quebec reported the most pronounced curtailment, as a result of very large seasonal reductions in the personnel of logging camps. Employment generally in all five economic areas was in greater volume than at March 1 in any recent year; the latest indexes for the Maritime Provinces, Quebec and Ontario were at their peak for that date in the period, 1921-39, while in the Prairie Provinces and British Columbia, the favourable comparison goes back to 1930.

Maritime Provinces.—There was a decrease in industrial activity in the Maritime Provinces taken as a unit, the 826 reporting employers reducing their staffs from 87,776 at February 1, to 86,025 at the beginning of March. The curtailment took place in New Brunswick, and resulted from the completion of seasonal operations in many logging camps; in Nova Scotia and Prince Edward Island, however, improvement was recorded. Manufacturing and transportation, on the whole, afforded more employment in the Maritimes, and the trend was also upward in trade and services. In addition to the large losses in logging already mentioned, there were moderate declines in mining, communications and construction. A small gain had been indicated at March 1, 1939, but the index then was many points lower than that of 116·0 at the date under review, when it was higher than in any other March for which statistics are available.

Reports for the beginning of March of last year had been tabulated from 812 firms, whose pay-rolls aggregated 74,366 persons, compared with 73,913 in the preceding month.

Quebec.—Employment in Quebec showed a decrease which was larger than that recorded at the beginning of March, 1939, and also rather exceeded the decline which has been the average change between February 1 and March 1 in the last nineteen years. There was

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS.

(AVERAGE CALENDAR YEAR 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Mar. 1, 1927	97·5	97·4	96·2	100·1	95·2	93·0

[1] For explanation of term "Relative Weight", see footnote to Table I.

marked improvement in manufacturing at the date under review, notably in textile and iron and steel plants; on the other hand, construction and maintenance showed curtailment, and there were large reductions in logging as the season drew to a close. Statements were tabulated from 2,967 establishments, whose employees numbered 327,022, as against 331,993 at the beginning of February. The index, at 114·3, was slightly higher than at March 1, 1939, when it stood at 112·8, according to the information furnished by 2,826 employers, with 320,154 persons on their staffs.

Ontario.—A slackening was noted in Ontario, where the 5,197 co-operating firms released 513 workers from their forces, bringing them to 478,003 at March 1. The trend of employment at that date in the years for which

statistics are available has frequently, though not invariably, been upward, and the average change in the years since 1920 has been a small increase. The March 1 index, at 120·0, was many points higher than at the same date in 1939, when it had stood at 109·1; 4,918 returns had then been tabulated, showing a personnel of 428,734 men and women.

There was considerable improvement in employment in factories at the date under review, the co-operating manufacturers having added 3,770 workers to their staffs. The increase took place mainly in textile, iron and steel and lumber plants, while the vegetable food division was slacker. Among the non-manufacturing classes, logging, building, transportation, mining and retail trade showed declines, those of a seasonal character in the first-named being most pronounced. On the other hand, railway construction and maintenance and wholesale trade reported heightened activity.

Prairie Provinces.—Contractions were indicated in Manitoba, Saskatchewan and Alberta, the loss in the Prairies repeating the downward trend which has been in evidence in these provinces as a unit at that date in fifteen of the nineteen preceding years for which statistics are available. The latest index, at 98·5, was higher than that of 94·3 at March 1, 1939, although a small, contra-seasonal increase from the preceding month had then been shown. Data were tabulated from 1,701 establishments with 128,711 employees at the date under review, compared with 131,630 in their last report. The manufacturing industries reported a moderate reduction, declines in the lumber, pulp and paper and iron and steel divisions rather more than offsetting gains in textile factories. Logging also recorded improvement, while construction and maintenance, transportation, trade and mining released employees.

The 1,632 firms making returns for March 1 of last year had reported 121,539 men and women on their pay-rolls, compared with 121,150 at the first of February, 1939.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

Note.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

British Columbia.—The production of lumber, pulp and paper, iron and steel and non-ferrous metal goods afforded more employment, while other classes showed little general change; activity in manufacturing as a whole considerably advanced, and there was also improvement in logging, but the tendency in most other groups was moderately downward, the largest losses being in retail trade. The working forces of the 1,208 co-operating employers aggregated 89,682 persons, as compared with 88,088 in the preceding month. This increase exceeded the average gain indicated at March 1 in the period, 1921-1939, and also compared favourably with that reported at the same date in 1939. The latest index, at 101·8, was some five points higher than at March 1, 1939, when the 1,121 firms furnishing statistics had employed 83,053 workers.

Index numbers of employment by economic areas are given in Table 1.

Employment by Cities

Employment increased in five of the eight cities for which separate tabulations are made, Montreal, Quebec City, Toronto, Hamilton and Windsor showing improvement, while curtailment was reported in Ottawa, Winnipeg and Vancouver. Industrial activity in each of these cities, except Quebec, was at a higher level than at March 1, 1939, while employment was also brisker in these centres than in the late winter in any of the preceding seven or eight years.

Montreal.—Heightened activity was shown in Montreal, where there were gains in manufacturing, (chiefly in textile and iron and steel factories), and in construction and maintenance and trade. Statements were tabulated from 1,756 firms employing 168,360 workers, as compared with 164,537 in the preceding month. For March 1 of last year, 1,652 employers had reported 156,380 men and women on their staffs; the index then had been lower, standing at 101·4, as compared with 108·1 at the latest date.

Quebec.—Manufacturing afforded more employment, mainly in the chemical and iron and steel groups, while services also showed some improvement. Construction, transportation and trade, however, were quieter. The working forces of the 210 co-operating establishments totalled 15,081 persons, compared with 14,863 at February 1, 1940. The index was much lower than at the same date in 1939, although a rather smaller advance had then been indicated by the 205 firms furnishing data, whose employees had numbered 16,478.

Toronto.—Activity increased considerably in manufacturing in Toronto, the largest gains being in the textile and iron and steel groups, while there was a decline in electrical apparatus and printing and paper factories. Construction also showed a falling-off. Returns were received from 1,779 employers, with 147,506 men and women on their pay-rolls at the beginning of March, as compared with 146,562 at February 1. The index, standing at 114·6, was over nine points higher than at March 1, 1939, when a reduction had been reported by the 1,692 establishments making returns, whose staffs aggregated 133,514.

Ottawa.—Employment in Ottawa showed a slackening; manufacturing and building were rather busier, but trade released some employees, while little general change was recorded in other industries. The 228 co-operating firms reported a total pay-roll of 14,771 persons at the date under review, as compared with 14,800 at February 1. The index was rather higher than at the beginning of March, 1939, although an upward tendency had then been indicated by the 223 employers whose data were tabulated, and who employed 14,277 men and women.

Hamilton.—A favourable movement was noted in Hamilton, mainly in building and manufacturing; in the latter, the greatest gains were in the textile and clay, glass and stone industries. Trade, on the other hand, was rather slacker. An aggregate staff of 38,163 was indicated by the 334 concerns furnishing statistics, who employed 38,023 in their last report. A gain had also been recorded at the same date of last year, but the level of employment then was lower, the index standing at 97·4, as compared with 117·1 at March 1, 1940. For the beginning of March, 1939, 315 employers had made returns, showing 31,396 persons on their paylists.

Windsor.—The trend was upward in Windsor, there being a small advance in the iron and steel and transportation divisions. Data were received from 196 establishments, with 20,633 workers, or 85 more than at February 1. Employment was brisker than at the same date of last year, when a decrease had been recorded; the 190 firms whose statistics were received for March 1, 1939, had a staff of 19,119.

Winnipeg.—Reduced activity was noted in Winnipeg, where 529 concerns reported 41,217 persons in their employ, as against 41,831 in the preceding month. There was a falling-off in manufacturing, principally in printing and publishing works, and trade was also quieter, while other industries showed little general change. Employment was in larger volume than at March 1 of last year, when a decline had also been reported by the 511 co-operating

employers, whose personnel had included 38,325 men and women.

Vancouver.—Manufacturing recorded some improvement in Vancouver, but transportation and trade afforded less employment. On the whole, there was a decrease of 437 persons in the pay-rolls of the 527 co-operating establishments, which had 36,518 employees. A smaller contraction had been indicated at the same date of a year ago, when 484 firms had reported 34,700 workers; the index was then nearly three points lower than that of 109·0 at the latest date.

Employment by Industries

Manufacturing.—The trend in this group was again favourable, resulting in a higher level of employment than in any other month for which statistics are available. The index, at 122·6, was fractionally above the 1939 maximum of 122·2 and also exceeded the figures of 121·7 at October 1, 1937, and 121·6 at August 1, 1929, which were previously the highest indexes. Statistics for March 1, 1940, were furnished by 6,518 manufacturers having 629,589 operatives, compared with 618,445 at the beginning of February. This increase of 11,144 was slightly larger than usual for the time of year, and substantially exceeded the gain reported at March 1, 1939.

The most pronounced improvement took place in textile and iron and steel factories; in the former, some 5,400 and in the latter some 4,000 additional employees were reported by the co-operating establishments. Gains were also shown in fur, leather, lumber, tobacco, chemical and non-ferrous metal products. On the other hand, activity declined in food, clay, glass and stone and electric light and power plants.

The crude index in manufacturing rose from 120·5 at February 1, 1940, to 122·6 at the date under review, as compared with 107·0 at March 1, 1939, and 110·5 at March 1, 1938. As already mentioned, the latest advance was very slightly above the average according to the experience of past years, so that the index, after correction for seasonal influences, rose slightly, standing at 125·2, compared with 125·0 at February 1, 1940.

The following are the unadjusted index numbers at March 1 in the years since 1926:—1940, 122·6; 1939, 107·0; 1938, 110·5; 1937, 107·6; 1936, 99·5; 1935, 92·7; 1934, 86·5; 1933, 75·8; 1932, 87·0; 1931, 97·6; 1930, 110·9; 1929, 115·7; 1928, 104·7 and 1927, 99·8.

A review of the data for March 1, 1939, shows that returns had then been received from 6,265 manufacturers, whose staffs had aggregated 546,268, compared with 541,129 in the preceding month. From a comparison of the index numbers for March 1 of last year and the present year, it may be estimated that the co-operating factories employed over 80,000 more workers at the latter than at the former date.

Animal Products—Edible.—Employment in these industries showed a decrease, mainly in meat-packing plants. The index number stood at 131·3, or nearly twelve points higher than at March 1, 1939, when a larger decline had been noted. The working forces of the 300 reporting establishments aggregated 25,495 persons, as compared with 25,740 at February 1, 1940.

Leather and Products.—There was an advance in employment in this division at the beginning of March, according to statistics from 341 manufacturers, whose pay-rolls included 26,160 men and women, compared with 25,960 in the preceding month. The gains occurred mainly in Ontario. A larger increase had been noted in the leather industries at the corresponding date a year ago, but the index number was then some fifteen points lower than at March 1, 1940.

Lumber and Products.—The trend continued favourable in the lumber group; statements were tabulated from 949 employers, whose staffs totalled 43,630 workers, compared with 43,279 at February 1. Improvement was indicated in the Maritime Provinces, Ontario and British Columbia, while in Quebec, Manitoba and Alberta there was a falling-off. Employment was in greater volume than at March 1, 1939, although the advance then reported had been on a larger scale.

Plant Products, Edible.—A small decline was recorded in the edible plant product group, chiefly in the flour and cereal and sugar and syrup divisions, while other groups were busier. The firms making returns to the Dominion Bureau of Statistics, 536 in number, had 35,351 persons in their employ, or 66 fewer than at the beginning of February. A more pronounced loss had been indicated at the beginning of March of last year, when the index number stood at 104·2, compared with 115·8 at the date under review.

Pulp and Paper Products.—Employment in this division showed moderate improvement, mainly in the manufacture of paper products, while printing and publishing houses were slacker. There were gains in Quebec and British Columbia, with a falling-off in the remaining areas. A combined working force of 69,096 was recorded by 717 co-operating manufacturers, who had 69,169 employees at February 1. The index was higher than at March 1, 1939, when an increase on the whole had been reported.

Rubber Products.—A small decline was reported in the rubber industries; 53 factories reported 13,514 workers, as compared with 13,577 in their last return. The index number, at 108·1, was a few points higher than at March 1, 1939, despite the fact that the movement had then been favourable.

Textile Products.—Greatly heightened activity was evident in this group, chiefly in garment and personal furnishing, headwear, cotton, woollen and knitting factories. The level of employment in the textile division was much higher than at March 1, 1939, or any other date for which information is available. The pay-rolls of the 1,200 co-operating establishments included 124,105 men and women, as compared with 118,675 at February 1, 1940. Most of the improvement was in Quebec and Ontario, although there were very general gains.

Tobacco.—Additions to staffs were noted at March 1 in tobacco works, 46 of which reported 14,206 employees, compared with 13,534 at February 1. The index, standing at 172·2, was higher by over eight points than at the same date of a year ago; a smaller increase had then been noted.

Beverages.—Little general change was shown in beverage manufacturing between February 1 and March 1, 42 fewer persons being reported on the pay-rolls of the 147 co-operating plants, whose employees numbered 9,028 at the latter date. The index was several points higher than at the same date last year, although the tendency had then been favourable.

Chemical Products.—Statistics tabulated from 321 chemical factories showed that they employed 21,327 persons, compared with 21,113 in the preceding month. Employment in this division was much brisker than at March 1 of a year ago, when a loss had been recorded.

Clay, Glass and Stone Products.—There was a moderate decline in the building material industries, in which employment was, however, at a higher level than at the corresponding date in 1939. Statements were compiled from 219 manufacturers with 9,357 employees, as against 9,558 in the preceding month.

Electric Light and Power.—Activity in plants producing electric power showed a falling-off, according to the 103 co-operating establishments, which employed 16,581 workers, compared with 16,776 at February 1. The largest reductions took place in Quebec and the Maritime Provinces. The Dominion index number, at 130·7, was higher than that of 123·9 at March 1, 1939, when a similar decrease had been noted.

Electrical Apparatus.—Employment generally in electrical appliance works was unchanged from the preceding month; 125 factories reported 18,959 men and women on their pay-rolls, or four fewer than at February 1. Curtailment had been indicated at the beginning of March of last year, and the index number then was 15½ points lower.

Iron and Steel Products.—Continued advances were made in the iron and steel industry, in which employment was in greater volume than in any other month since the spring of 1930. There were gains in the land vehicle, steel shipbuilding and repairing, heating appliance, agricultural implement, machinery and other divisions, while the crude, rolled and forged group released some employees. Returns were tabulated from 930 establishments having 153,060 persons in their employ, or 4,013 more than in the preceding month.

Non-Ferrous Metal Products.—Smelters and refineries reported considerable improvement, and there were moderate gains in other plants turning out non-ferrous metal products; 196 firms had 26,916 workers on their payrolls, as against 26,014, at the beginning of February. The increase took place largely in British Columbia. The index of employment was many points above that of March 1, 1939, when the trend had also been favourable.

Mineral Products, n.e.s.—Statistics tabulated from 98 employers in this group showed a slightly upward tendency, their forces aggregating 12,644, compared with 12,625 in the preceding month. A falling-off had been recorded at the corresponding date a year ago, and the index number then was lower.

Logging

There were marked seasonal contractions in logging camps, in many of which the season's operations were approaching completion; 414 firms had 52,751 men in their employ, or 14,179 fewer than in their last report. The decline involved many more workers than that noted at the beginning of March of last winter, and also exceeded the average loss at March 1 in the years since 1920. The latest index, at 179·1, was substantially above the March 1, 1939, figure of 108·8, but was lower than at the same date in 1937 or 1938.

Mining

Coal.—Employment in the mining of coal showed a downward movement in Alberta, with moderate improvement in the Maritime Provinces and British Columbia. One hundred and seven operators lowered their labour forces from 25,988 persons at February 1, to 25,838 at the beginning of March, 1940. A smaller loss in personnel had been indicated at March 1, 1939; the index number then was fractionally lower.

Metallic Ores.—There was a decline in this group at the date under review. Data were received from 211 mines employing 43,630 workers, as against 44,157 at the beginning of February. The index stood at 350·2, as compared with 334·6 at the same date in 1939, when an improvement had been noted.

Non-Metallic Minerals (Other than Coal).—Employment in these industries showed an upward movement, according to statistics from 99 firms having 8,390 persons on their payrolls, or 112 more than in their last report. A rather smaller gain had been indicated at March 1 of a year ago, and the index then was lower.

Communications

A reduction was reported in the staffs of telephone and telegraph companies; returns were received from 86 employers with 21,956 workers, compared with 22,101 in the preceding month. There had also been a decrease at March 1, 1939, when employment was at a slightly lower level.

Transportation

Street Railways and Cartage.—Statistics were tabulated from 307 firms in this division, whose personnel included 28,912 men and women, as compared with 29,095 at the beginning of February. Although a small gain had been noted at the same date in 1939, activity then was at a rather lower level.

Steam Railways.—Employment in steam railway operation showed a falling-off, 426 fewer workers being reported than in the preceding month; the 101 co-operating companies and divisional superintendents had 60,322 persons on their payrolls. An advance had been indicated at March 1 of last year, when the index number was three points lower. Improvement was noted at the date under review in New Brunswick, but there was curtailment in the other provinces.

Shipping and Stevedoring.—There was a gain in the shipping and stevedoring group, in which employment was rather quieter than at the corresponding date in 1939. For March 1, 1940, 119 employers reported a staff of 11,528, or 251 more than in the preceding month.

Construction and Maintenance

Building.—A contraction was shown generally in building activity at the beginning of March, the largest loss in employment being in Quebec. The 845 contractors furnishing data throughout the Dominion had 18,957 employees, as against 20,692 at February 1. The level of employment was slightly higher than in the late winter of 1939, although a smaller decline had then taken place.

Highway.—Highway construction showed further curtailment at March 1, 1940, when 357 employers reported 25,794 workers, as compared with 27,614 at the beginning of February. There were fairly general reductions, those in British Columbia being greatest. Employment in this group at March 1, 1939, was much more active than at the date under review; a gain from the preceding month had then been reported.

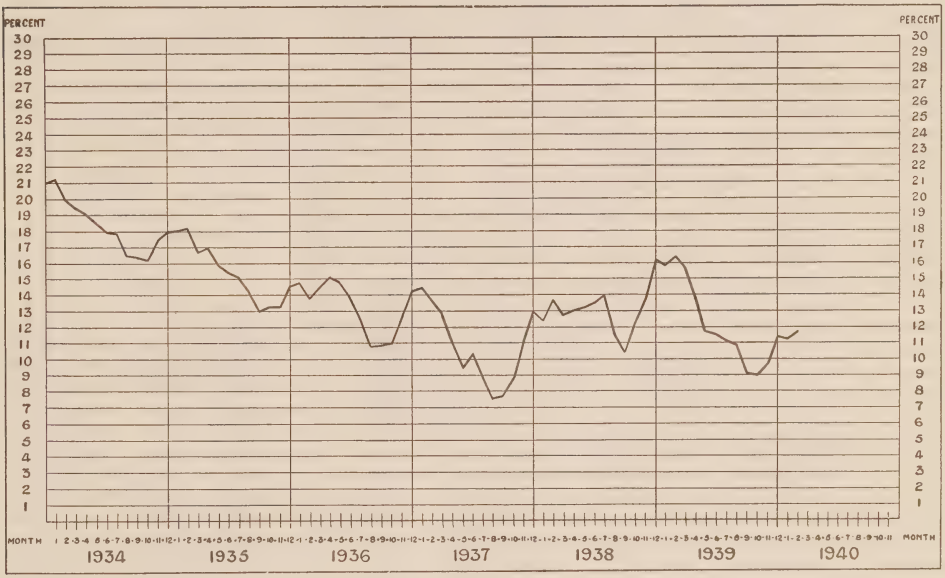
Railway.—Employment on steam railway construction and maintenance moderately increased, according to data received from 29 companies and divisional superintendents employing 22,314 persons, or 333 more than in their last report. Heightened activity was recorded in Ontario and in the Maritime and Prairie Provinces, while in Quebec and British Columbia the tendency was downward. A much larger advance had been noted at the beginning of March of last winter, and the index then was thirteen points higher.

Services

In the service group, 594 establishments reported a staff of 29,324, as compared with 29,144 at February 1. There were small gains in employment in hotels and restaurants and in laundries and dry-cleaning establishments. Activity generally was slightly greater than in the same month of 1939, when a decrease had been indicated.

Trade

Retail trade showed a substantial decline, while improvement was recorded in wholesale houses; the curtailment in the former was seasonal. On the whole, there was a reduction of 1,415 in the personnel of the 2,082 merchandising establishments furnishing data, which had 130,138 employees. The index stood at 134·9 at March 1, 1940, compared with 128·9 at the beginning of March, 1939, a larger contraction had then been recorded in the group as a whole.



Tables

Index numbers of employment by economic areas and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns at the date under review.

(2) Unemployment in Trade Unions at the Close of February, 1940

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged at work outside their own trades or who are idle due to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The local trade union situation at the close of February remained much the same as in the preceding month, what nominal variation was apparent being in an unfavourable direction. Reporting for February were 2,000 labour organizations combining a total of 254,805 members, 29,804 of whom or 11·7 per cent were without employment on the last day of the month, in contrast with a percentage of 11·3 in January. Considerable improvement in conditions, however, was reflected from February, 1939, when 16·4 per cent of inactivity was recorded. Saskatchewan unions showed moderate losses in work afforded during February from the preceding month, steam railway employees accounting almost entirely for the less favourable movement in this province. In Nova Scotia retarded activity on a small scale was reported and fractional declines only were evident among New Brunswick, Quebec, Ontario and Manitoba unions. British Columbia members alone indicated an upward employment tendency, though the variation from January was but nominal. In Alberta activity was maintained in the same volume as in January. When compared with the returns for February, 1939, noteworthy increases in employment prevailed for Alberta, New Brunswick, British Columbia and Ontario members and more moderate advancement was registered from Quebec and Nova Scotia. In Saskatchewan minor gains occurred. The percentage of idleness reported for Manitoba was identical with that of February, 1939.

A separate compilation is made each month of unemployment in the largest city in each province, with the exception of Prince Edward Island. Of these, Edmonton unions reflected considerable employment expansion during February over the previous month and in Halifax, Saint John, Montreal, Winnipeg and Vancouver the trend was favourable, though the variations from January were quite small. Regina unions, however, reported moderate curtailment in activity, while in Toronto an unchanged situation from January was apparent. Contrasted with the returns for February last year Halifax and Edmonton members indicated a much greater volume of activity during the period under

review and advances of somewhat lesser degree were noted by Montreal, Saint John, Vancouver and Toronto unions. In Regina there was a slightly better employment tendency, while the Winnipeg gains were so slight as to be almost negligible.

From the chart which accompanies this article and traces the course of unemployment from January, 1934, to date, it will be seen that the tendency of the curve during February was nominally upward in an unfavourable direction. When compared with February of last year considerably improved conditions were manifest by the projection of the curve, which at the close of the month reviewed rested at a level below that of February a year ago.

The manufacturing industries, with 594 local unions reporting during February an aggregate of 99,144 members, showed that 8,815 or a percentage of 8·9 were unemployed on the last day of the month, in comparison with 9·1 per cent of inactivity in January. Improvement in much greater measure was apparent from February, 1939, when 14·3 per cent of the members recorded were out of work. Rubber workers, whose membership was small and hence did not materially affect the situation in the manufacturing industries as a whole, showed a pronounced increase in employment from January and noteworthy advancement was registered by glass workers and electric current employees. More moderate gains were evident among metal polishers, hat, cap and glove, and wood workers. The trend of activity was also favourable for garment, textile and carpet, jewellery, brewery and leather workers, and printing tradesmen. Of the recessions in employment which were almost sufficient to offset this improvement the most important were indicated by general labourers and meat cutters and butchers. Noteworthy curtailment in activity was apparent also, among fur and gas workers, and the situation declined slightly for paper makers, iron and steel workers, bakers and confectioners, and cigar and tobacco workers. In comparison with returns for February, 1939, extensive increases in activity were reported among metal polishers, wood workers, and paper makers, and substantially better conditions prevailed for iron and steel, glass and brewery workers. Heightened employment of noteworthy degree was evident also, among textile and carpet, garment and jewellery workers. Minor gains were recorded by cigar and tobacco, and leather workers, bakers and confectioners, and meat cutters and butchers. Fur and rubber workers, and general labourers, on the other hand, were much quieter and gas, and hat, cap and glove workers, electric current employees and printing tradesmen indicated a somewhat lower level of employment.

Activity for coal miners eased off slightly during February from the preceding month, the 56 unions making returns with a combined membership of 21,561 persons showing that 1,071 or 5·0 per cent were idle on the last day of the month, compared with 3·5 per cent in January. An appreciable betterment in the situation was apparent from February, 1939, when 10·4 per cent of unemployed members was recorded. The curtailment evident from January was confined to the Nova Scotia and Alberta coal fields, which showed a slight lowering in available employment. In British Columbia the trend was more favourable than in the preceding month, though the change was small. Adequate work was provided in both months under comparison for New Brunswick miners. Alberta members were afforded a much greater volume of work during Febru-

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1929	4·0	1·6	7·7	4·3	7·1	5·3	6·4	5·9	**5·7**

ary than in the corresponding month of last year and in Nova Scotia and British Columbia more moderate gains occurred. New Brunswick miners, as in the previous comparison, were all reported busy.

The downward employment movement, which has characterized the situation in the building and construction trades for several months, was in evidence throughout February, though the drop from January was rather small. Activity was, however, considerably better maintained than in February, 1939. Making returns for the month under review were 226 associations of these tradesmen with 27,323 members, 10,431 or 38·2 per cent of whom were idle at the end of the month, in contrast with percentages of 35·6 in January and 44·6 in February last year. Granite and stone cutters were decidedly less active than in January and moderate recessions occurred among tile layers, lathers and roofers, painters, decorators and paperhangers, and steam shovelmen. The tendency was also in a slightly less favourable direction for carpenters and joiners, plumbers and steamfitters, and bricklayers, masons and plasterers. Hod carriers and building labourers, on the contrary, reported fair sized gains in work afforded and slight advancement only was manifest by bridge and structural iron workers, and electrical workers. Heavy increases in employment from February, 1939, were registered by carpenters and joiners, electrical workers, and bridge and structural iron workers, and the gains noted by painters, decorators and paperhangers, and plumbers and steamfitters were substantial. Hod carriers and building labourers reported a fractionally improved situation. Much slacker conditions, however, prevailed for granite and stone cutters, and bricklayers, masons and plasterers, and noteworthy curtailment was indicated by steam shovelmen, and tile layers, lathers and roofers.

The situation in the transportation industries during February showed a tendency toward retarded employment from January, though the variation was slight, according to the returns compiled from 852 local unions with a membership numbering 70,352 persons. Of these, 7,169 or a percentage of 10·2 were idle at the end of the month, in contrast with 9·2 per cent of unemployment in January. Increases in activity of rather moderate proportions, however, were reflected from February, 1939, when 13·2 per cent of unemployed members was recorded. The steam railway division, which involved nearly 80 per cent of the entire group membership reported in the transportation industries, showed fractional curtailment in activity and in the navigation division conditions were much quieter. Teamsters and chauffeurs, on the other hand, indicated a noteworthy rise in employment from January. Street and electric railway employees, as in the preceding month, were quite busy, no change being recorded in the volume of inactivity apparent. Contrasted with the returns for February, 1939, navigation workers were much more active during the month under review and a better situation obtained for steam railway employees. Teamsters and chauffeurs, however, suffered rather pronounced losses in work available, while among street and electric railway employees the same situation prevailed as in February, 1939.

Retail shop clerks showed little change in conditions in the three months used for comparative purposes, the 5 associations making returns for February this year with 1,706 members indicating that only 0·5 per cent were without employment in comparison with percentages of 0·4 in January and 0·3 in February a year ago.

Heightened activity of moderate degree was manifest by civic employees during February from the preceding month and the situation also tended favourably from February, 1939, though the change in this latter comparison was but nominal. For the month under review reports were compiled from 86 associations of these workers, comprising a membership of 10,142 persons, 132 or 1·3 per cent of whom were idle, as contrasted with 5·2 per cent in January and 1·5 per cent in February last year.

The 138 labour organizations in the miscellaneous group of trades from which reports were received during February, covering 10,743 members, indicated that 455 were unemployed on the last day of the month, a percentage of 4·2, in contrast with 4·5 per cent in January. Improvement on a substantially larger scale was reflected from February, 1939, when 10·5 per cent of idleness was recorded. Hotel and restaurant employees, stationary engineers and firemen, and unclassified workers all showed fractional gains in activity from January, while among theatre and stage employees there was some falling off in work afforded. Conditions for barbers, however, remained identical with those of January, The determining factor in the better situation noted in the miscellaneous group of trades, as a whole, from February last year was the extensive advancement shown by unclassified workers, though gains on a considerably smaller scale were recorded among stationary engineers and firemen, hotel and restaurant, and theatre and stage employees. Barbers, alone, showed some slight employment cessation.

Fishermen during February reported much the same situation as in January, the 6 local unions from which returns were tabulated, with a membership numbering 2,555 persons, showing that 265 or a percentage of 10·4 were

unemployed, as contrasted with a percentage of 10·0 in January. A moderately improved situation was apparent from February, 1939, the percentage of idleness for that month standing at 13·8.

Lumber workers and loggers were afforded a somewhat better volume of employment during February than in January and conditions were decidedly improved from February a year ago. This was manifest by the reports tabulated from 6 local unions of these workers with 2,466 members, 391 or 15·9 per cent of whom were idle at the close of February, in contrast with percentages of 19·7 in January and 55·6 in February last year.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1929 to 1939, inclusive, and also the percentages of unemployment for February of each year from 1929 to 1937, inclusive, and for each month from February, 1938, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for February, 1940

The volume of business transacted by the offices of the Employment Service of Canada during the month of February, 1940, as indicated by the average daily placements effected, showed a loss of 3 per cent from that of the previous month and of over 15 per cent from February, 1939. Declines from January were reported in services, farming, logging and trade, of which the first two were quite substantial. Gains were registered in construction and maintenance, transportation and manufacturing, the last two being nominal only. Mining remained unchanged. In comparison with February a year ago a very pronounced decline in construction and maintenance, as well as a marked loss in farming much more than counterbalanced the increased placements recorded in services, manufacturing, mining, trade and transportation, the most noteworthy of which were in services and manufacturing. A small loss was also recorded in logging.

The accompanying chart shows the trend of employment since January, 1938, as represented by the ratio of vacancies and of placements effected for each 100 applications for work registered at the offices of the Employment Service of Canada, computations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications varied less than 1 per cent throughout February, 1940, the levels being slightly lower on the last day of the month than at the close of January and much below those recorded at the end of February a year ago. The ratios of vacancies to each 100 applications were 39·2 and 38·4 during the first and the second half of February, 1940, in contrast with ratios of 44·1 and 49·5 during the corresponding periods of 1939. The ratios of placements to each 100 applications during the periods under review were 36·7 and 36·6 as compared with 42·9 and 47·3 during the corresponding month of 1939.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during 1940 was 1,006, as compared with 1,036 during the preceding month and with 1,159 in February a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,590 as compared with 2,711 in January, 1940, and with 2,485 during February, 1939.

The average number of placements made daily by the offices of the Service during February, 1940, was 949, of which 581 were in regular employment and 368 in work of one week's duration or less, as compared with a total daily average of 977 during the preceding month. Placements in February last year averaged 1,119 daily, consisting of 580 placements in regular and 539 in casual employment.

During the month of February, 1940, the offices of the Service referred 25,273 persons to vacancies and effected a total of 23,713 placements. Of these, the placements in regular employment were 14,523, of which 9,685 were of men and 4,838 of women, while placements in casual work totalled 9,190. The number of vacancies reported by employers was 14,865 for men and 10,261 for women, a total of 25,126, with applications for work numbering 64,735, of which 46,606 were from men and 18,129 from women. Reports for January, 1940, showed 26,935 positions available, 70,466 applications made, and 25,400 placements effected, while in February, 1939, there were recorded 27,816 vacancies, 59,631 applications for work and 26,834 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1930, to date:

Year	Placements		
	Regular	Casual	Total
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214

*95 placements effected by offices now closed.

Nova Scotia

During the month of February, 1940, orders received at Employment Offices in Nova Scotia called for over 12 per cent fewer workers than in the preceding month, but nearly 100 per cent more than during the corresponding month of last year. There was a decrease of over 11 per cent in placements when compared with January, but an increase of nearly 103 per cent in comparison with February, 1939. The substantial increase in placements over February of last year was almost entirely due to a large gain in construction and maintenance, although moderate improvement was also reported in services and small increases in logging and manufacturing. The changes in all other groups were unimportant. Placements by industrial divisions included manufacturing 31; logging 70; construction and maintenance 1,007 and services 605, of which 492 were household workers. During the month 916 men and 111 women were placed in regular employment.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications———— Vacancies - - - - - - - - - Placements—o—o—o—o—o—o

New Brunswick

Opportunities for employment, as indicated by orders received at Employment Offices in New Brunswick during February, were over 4 per cent better than in the preceding month and over 29 per cent above those of the corresponding month of last year. There was an increase also in placements of over 3 per cent when compared with January and of over 28 per cent in comparison with February, 1939. A moderate increase in construction and maintenance and smaller gains in services, logging and manufacturing accounted for the improvement in placements over February of last year, as small changes, only, were reported in all other groups. Industrial divisions in which most of the placements were effected during the month were logging 38; construction and maintenance 491 and services 587, of which 493 were household workers. Placements in regular employment numbered 151 of men and 93 of women.

Quebec

There was a nominal increase only in the number of positions offered through Employment Offices in the Province of Quebec during February when compared with the preceding month, but a gain of nearly 20 per cent in comparison with the corresponding month of last year. Placements also were over 2 per cent higher than in January and nearly 16 per cent above February, 1939. When comparing placements by industrial divisions during the month under review with those of February of last year, the most important increases were in services, logging and manufacturing and there were smaller gains in trade and farming. The only decline of importance was in construction and maintenance and this largely offset the increases recorded

in other groups. Placements by industrial divisions included manufacturing 269; logging 775; construction and maintenance 1,350; trade 100 and services 3,143, of which 2,923 were of household workers. There were 2,313 men and 1,898 women placed in regular employment.

Ontario

Orders received at Employment Offices in Ontario during February called for nearly 6 per cent fewer workers than in the preceding month and nearly 17 per cent less than during the corresponding month of last year. There was a decrease also in placements of nearly 6 per cent when compared with January and of nearly 19 per cent in comparison with February, 1939. The decline in placements from February a year ago was due to a substantial decrease in the highway division of construction and maintenance. This loss was offset, in part, by fairly large gains in building construction and manufacturing and a small increase in services. The changes in all other groups were unimportant. Placements by industrial divisions were manufacturing 827; logging 362; farming 530; mining 91; construction and maintenance 3,266; trade 254 and services 3,034, of which 2,189 were of household workers. Regular placements numbered 3,012 of men and 1,374 of women.

Manitoba

The demand for workers, as indicated by orders received at Employment Offices in Manitoba during February, was over 20 per cent less than in the preceding month, but over 11 per cent greater than during the corresponding month of last year. Placements declined nearly 19 per cent from January, but were nearly 17 per cent above February, 1939. There were fairly important increases in construction and maintenance and logging and smaller gains in manufacturing and services, when comparing placements during the month under review with those of February last year. The improvement shown in these groups was partly offset by a large decrease in farming. Minor changes only were reported in all other groups. Industrial divisions in which most of the placements were effected during the month were manufacturing 117; logging 300; farming 522; construction and maintenance 317 and services 694, of which 615 were of household workers. During the month 1,200 men and 401 women were placed in regular employment.

Saskatchewan

There was a decline of over 14 per cent in the number of positions offered through Employment Offices in Saskatchewan during February, when compared with the preceding month and of over 40 per cent in comparison with the corresponding month of last year. Placements also showed a decrease of over 17 per cent when compared with January and of over 42 per cent in comparison with February, 1939. A large decrease in farming and a moderate loss in services accounted for the decline in placements from February of last year. Small gains were reported in construction and maintenance, manufacturing, logging and trade. Placements by industrial divisions included farming 169; construction and maintenance 67 and services 485, of which 358 were of household workers. Placements in regular employment numbered 225 of men and 286 of women.

Alberta

Employment opportunities, as indicated by orders received at Employment Offices in Alberta during February, were over 14 per cent less favourable than in the preceding month, but nearly 27 per cent better than during the corresponding month of last year. There was a decrease of nearly 16 per cent in placements when compared with January, but an increase of over 26 per cent in comparison with those of February, 1939. All industrial divisions, except farming, participated in the increase in placements over February of last year, the most important gains being in logging, construction and maintenance and services. Industrial divisions in whch most of the placements were effected during the month were manufacturing 56; logging 334; farming 435; construction and maintenance 205 and services 412, of which 356 were household workers. There were 952 men and 314 women placed in regular employment.

British Columbia

There was a decline of about 8 per cent in the number of positions offered through Employment Offices in British Columbia during February, when compared with the preceding month and of nearly 58 per cent in comparison with the corresponding month of last year. Similar percentages of loss were reported in placements under both comparisons. The substantial decrease in placements from February of last year was due to a large reduction in construction and maintenance and a fairly heavy loss in logging. There was a nominal decline in farming, but all other groups showed improvement, the largest increase being in services, manufacturing and trade. Placements by industrial divisions included manufacturing 90; logging 149; farming 77; construction and maintenance 1,087 and services 826, of which 665 were of household workers. During the month 916 men and 361 women were placed in regular employment.

Movement of Labour

During the month of February, 1940, the offices of the Employment Service of Canada effected 14,523 placements in regular employment, 6,660 of which were of persons for whom the employment located was outside the immediate vicinity of the offices at which they were registered. Of the latter, 323 were granted the Employment Service reduced transportation rate, 279 proceeding to centres within the same province as the despatching office and 44 to other provinces. The reduced transportation rate which is 2·5 cents per mile with a minimum fare of $4 is granted by the railway companies to bone fide applicants at the offices of the Employment Service who may wish to travel to distant employment for which no workers are available locally.

In Quebec during February the Hull office was instrumental in the despatch of 2 bushmen to employment in the Pembroke zone. Ontario transfers at the reduced rate during February were 220 in number, 217 provincial and 3 interprovincial. The latter were of machine workers shipped from St. Catharines to Montreal. Within the province the Port Arthur office granted certificates to 172 bush workers, 2 hotel employees and one construction lineman, the Sudbury office to 35 bush labourers and the Fort William office to 6 bushmen journeying to centres within their respective zones. The one remaining transfer was of a core maker travelling to Sault Ste. Marie on a certificate secured at Hamilton. The labour movement in Manitoba during February originated at Winnipeg and comprised the despatch of 43 persons, 4 of whom were destined to provincial employment and 39 outside the province. Provincially the transfers were within the Winnipeg zone and included 2 cooks, one carpenter and one fisherman. Workers going outside the province were all bound for the Port Arthur zone among whom were 21 bushmen, 15 mine workers, 2 farm hands and one cookee. The Edmonton office was responsible for the 56 transfers effected in Alberta during February, all of which were within the territory administered by that city office. Certificates for transportation were issued to 38 bushmen, 4 fishermen, 4 labourers, 3 mine workers, 3 farm hands, one baker, one waitress, one butcher and one hotel worker. Taking advantage of the reduced rate in British Columbia during February one farm hand and one farm housekeeper secured certificates at the Vancouver office for transportation to employment within the same zone.

Of the 323 persons who profited by the Employment Service reduced transportation rate during February, 189 were conveyed by the Canadian National Railways, 131 by the Canadian Pacific Railway, 2 by the Pacific Great Eastern Railway and one by the Northern Alberta Railway.

(4) Building Permits Issued in Canada During February, 1940

The statistics of building permits issued by the Dominion Bureau of Statistics have recently been enlarged to include 202 municipalities instead of 58 as formerly. An additional one, Megantic, Quebec, now issues permits and has been added to the list, and will be included in future compilations.

A classification of all permits issued according to the proposed use of the building to be erected, altered or repaired is shown in Table 1.

Table 11 shows values and average indexes for preceding years, value of permits issued for the current month, and also includes total values for the last twenty calendar years. Because of space limitations this review presents only the tabular summary in the more condensed form in which it has formerly appeared.

For the February report, returns were received from 143 municipalities, 106 of these reported detailed building values while 37 had issued no permits during the month. The remainder of the 202 municipalities, 59 in number, failed to furnish any report, and values of their permits could not be included in this compilation. As a consequence the value of the report is temporarily nullified to a certain extent.

The total value of permits issued in February, 1940, by 106 municipalities was $3,722,799. Revised figures for the month of January now show 117 municipalities reporting a value of $3,334,337. Fifty-six of the 58 original municipalities reported a value of $3,015,089 for February in comparison with a revised value of $2,411,950 for January, 1940. The total value of permits reported by these 58 municipalities in February, 1939, was $1,912,151.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF MARCH, 1940

Reports of the Superintendents of the Employment Service

THE employment situation at the end of March, 1940, was reported by the superintendents of the Employment Service of Canada to be as follows:—

Farmers in the Maritimes have not yet started spring ploughing, but some orchard pruning and cutting of firewood have been done. Drift ice had rather hampered fishing, although nets were being repaired for the lobster season. Haddock, halibut and scallops were plentiful, but cod was scarce. Logging remained active, although the winter's cut was nearing completion. Coal mines in the New Glasgow area operated five and six days per week, while those in Cape Breton and vicinity worked from two to five days. Nearly all manufacturing plants were working full time. Little new building construction was started, but that under way was progressing favourably. Snow shovelling and highway maintenance had also provided work for numerous men. Passenger and freight traffic by rail and bus was steady, but by boat, indefinite. Trade was fair. The regular demand for household workers existed and placements were made of female help, both in the city and country.

Farming and logging were quiet in the Province of Quebec, although in the latter industry, river driving, which would soon commence, would provide employment for many men. Industries at Chicoutimi worked at 90 per cent of their normal capacity and at Matane, three new sawmills were in operation. At Hull and Three Rivers paper and textiles were very active, with shoe factories recording improvement also in the latter district and at Thetford Mines. Montreal reported great activity in iron and steel,

while textile, leather, clothing and aluminum plants were fairly busy. At Sherbrooke, general conditions had progressed favourably since January, staff increases being shown in the wool factories, while clothing and tissue establishments were producing 25 per cent above the 1938-39 levels. At Val d'Or, however, manufacturing was quiet. Building construction was slowly getting under way, although the present work consisted chiefly of repairs and alterations. Road construction was active at Hull, but elsewhere, the greater amount of work provided consisted of snow shovelling. Trade was good and the call for domestic workers satisfactory.

There was an improved demand for farm hands in Ontario, with further increases anticipated as soon as men were able to get on to the land. Little activity was recorded in lumbering, but preparations were being made for river driving. Mining was normal, with a fair call for various classes of miners. Employment gains of recent months in manufacturing were well maintained, iron, steel, textile, rubber and leather plants being particularly busy. Building was still rather slow, the major portion of the construction consisting of alterations and repairs, but prospects for improvement in the near future were favourable; little work was being done on highways, other than maintenance and snow shovelling after the recent storms. Shipyards also were active, as boats were being outfitted in readiness for the opening of navigation. Trade was fair. Orders for household help in the Women's Division were increasing rapidly and qualified domestic help was scarce, as hotels, restaurants and clubs were gradually adding to their staffs. Industrial and clerical vacancies for women, however, were few in number.

Farming in the Prairie Provinces showed increased activity, the bulk of the orders being for spring work with wages from $20 to $30 per month. Logging was decidedly quiet and mines, though fairly busy due to the recent cold spell, had reduced their crews. Manufacturing showed little improvement. At Winnipeg, great activity was recorded in construction as several important undertakings were under way, but elsewhere, although more building than in recent weeks was in evidence, few large contracts were reported. Several railroad gangs had been hired, but no highway construction was in progress. Trade was fair. Experienced domestics in the Women's Division were difficult to obtain, especially those who were willing to accept work outside the city.

A good demand existed for farm help in British Columbia with a number of unfilled orders on hand. Very little labour turnover took place in logging, for the movement of men into the Great Central Lake area and the Franklin and Menzies Bay districts was offset by the reduction of crews in the Cowichan Lake section. Sawmill operations too had been curtailed and crews reduced, as lack of boats prevented shipment of lumber already in the yards. Mining was quiet and many prospectors and miners were leaving for the Yukon. Halibut boats were to leave Prince Rupert shortly and cannery crews were arriving from the South. Manufacturing showed little change. Construction was active, as seasonal employment opened up and conditions improved. Shipyards were particularly busy and there, many skilled mechanics found work. At Prince Rupert and Victoria the waterfront was active, with all regular longshoremen employed. Trade was fair. More vacancies were listed in the Women's Division and wages for experienced cooks-general were a little better.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, March, 1940, summarized the employment situation as follows:—

Although weather conditions had in general improved by February 12 when the count of the unemployed was taken, the effect of long-continued frost and snow in causing temporary unemployment was still more marked at that date than when the previous count was taken in January. Outdoor work was still hindered in many areas, and short deliveries of materials or inability to transport output had dislocated working conditions in a large number of cases. There was, nevertheless, a drop of 80,145 in the numbers wholly unemployed (including casuals) in Great Britain between the two dates, but the number temporarily stopped increased by 65,349, leaving a net reduction of 14,796. For Great Britain and Northern Ireland there was a total of 1,585,884 wholly unemployed (1,266,954) or temporarily stopped (318,930) on the registers at February 12, a reduction of 400,418 compared with the figures at February 13, 1939.

During the fortnight following February 12 the continuance of better weather enabled much of the dislocation to be remedied, and

there was a large drop, estimated at about 200,000, in the numbers registered.

As compared with February 13, 1939, the number unemployed at February 12, 1940, in Great Britain was lower by 392,618.

Unemployment decreased between January 15 and February 12 in tailoring and dressmaking, hotel and boarding house service, the distributive trades, Local Government service, printing and bookbinding, motor vehicle, cycle and aircraft manufacture, and laundry service. On the other hand, there were increases in the numbers temporarily suspended from work in agriculture, horticulture, etc., coal mining, building and public works contracting, iron and steel and tinplate manufacture, the brick and tile industry, stone quarrying, ship building and repairing, and textile bleaching, dyeing, etc.

The numbers unemployed decreased considerably in the London, North-Western, South-Western and Southern Divisions; but there were marked increases in the Midlands, North-Midlands, Northern and Eastern Divisions and in Wales.

Among insured persons, aged 16-64, the percentage unemployed in Great Britain and Northern Ireland at February 12, 1940, was 10·3, as compared with 10·2 at January 15, 1940, and 13·1 at February 13, 1939. For persons within the general scheme the corresponding percentages were 10·2 at February 12, 1940, 10·2 at January 15, 1940, and 13·3 at February 13, 1939. For persons within the agricultural scheme the percentages were 11·1, 9·7 and 9·9 respectively.

United States

Approximately 50,000 fewer workers were employed in non-agricultural industries in mid-February than in January, according to a report issued on March 26 by Miss Frances Perkins, United States Secretary of Labor. This decline was mainly due to further lay-offs in retail and wholesale houses and in public construction, seasonal declines that are usually offset by increases in manufacturing employment. However, as a result of substantial gains in industrial activity, over 1,000,000 more workers were engaged in non-agricultural occupations than in February a year ago.

The following paragraphs taken from the official press release indicate the employment situation in the United States to be as follows:—

This year there was a small decrease of less than 0·1 per cent, or about 3,500 employees, in factories. Factory employment ordinarily shows a seasonal increase from January to February of 1·6 per cent or about 125,000 workers. This year, however, a number of the major durable-goods industries, including iron and steel, electrical machinery, automobiles, hardware, furniture, brick, glass, and sawmills, reported reduced employment instead of the customary February expansion.

Employment in the non-durable goods group as a whole increased, largely because of seasonal expansion in the clothing industries. Such industries as men's clothing and tobacco manufactures did not show as large gains as usual, and some reported small contraseasonal losses, among them textiles and book and job printing. Employment in the manufacture of aircraft, after more than doubling since last year at this time, remained almost stable between January and February.

The employment changes in other lines of business and industry, with a few exceptions, conformed to the usual seasonal pattern. The employment declines of about 20,000 workers in retail establishments and 6,000 workers in wholesale firms correspond closely to the declines which took place in February, 1939. Class I steam railroads took on 4,200 men from January to February. Employment in the metal mining and oil producing industries fell slightly, and laundries and dyeing and cleaning establishments reported small seasonal recessions.

Employment on Private Construction.—In private building construction, and quarrying and non-metallic mining, small employment gains were reported in February instead of the usual seasonal losses, reflecting a resumption of activity following the sharply curtailed operations caused by the extremely severe weather in January. Employment on public construction projects declined, however, due primarily to completion of some P.W.A. projects and reduced work on roads. While employment in anthracite mining showed a small gain in February, pay rolls were considerably reduced from the January levels due to the pronounced decline in production during the week of February 5.

Employment on Public Works.—The number of persons at work on relief projects of the Work Projects Administration increased 59,000 in February, bringing the number employed on these projects to 2,251,000. The relief load, however, was less by 704,000 workers than in February, 1939. Wage payments of $110,275,000 to workers on relief projects were $4,133,000 more than in January.

The National Youth Administration gave employment to 14,000 additional youths on the Out-of-School Work Program in February and 23,000 students were added to the rolls of the Student Work Program.

Employment on construction projects financed from regular Federal appropriations fell off 5,000 in the month ending February 15, leaving 202,000 men still at work. There were, however, 30,000 more workers employed on these projects than in February, 1939. Pay rolls were $21,647,000.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada, which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the Labour Gazette for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages Scales of the respective provinces.

Respecting contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight-Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. The clause relating to wages and hours in the last named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide or except in cases of emergency as may be approved by the Minister."

This Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not apear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by Federal grant in the form of contribution, subsidy, loan, advance or guarantee. Thus, with respect to works for the elimination of grade crossings, towards which assistance is granted from Dominion public funds under Orders of the Board of Transport Commissioners, and certain other works being carried out under agreement with the provinces which are also assisted by grant of federal funds, the same labour conditions are enforced which apply to works of building and construction undertaken for the various departments of the Dominion Government.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by

the custom of the trade, or fair and reasonable hours, on contracts for governmental supplies and equipment the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

War Supply Board Contracts

All contracts awarded by the War Supply Board are subject to labour conditions for the protection of the workpeople concerned.

In the case of Building and Construction contracts, the labour conditions include fair wages schedules based on the rates current in the particular district where the work is being performed, and provide that the working hours shall not exceed eight per day and forty-four per week.

In the case of contracts for the manufacture and overhaul of aircraft, the labour conditions include one scale of minimum wage rates which has been approved for all work of this nature undertaken in Eastern Canada (Ontario, Quebec and the Maritime Provinces), and a separate and higher scale for all such contracts undertaken in Western Canada (comprising the area from Fort William to the Pacific Coast). These contracts are subject also to a working week of not more than forty-eight hours, provision being made that any necessary and authorized overtime work shall be paid for at a rate of not less than one and one-half times the regular rate.

Contracts for shipbuilding and repair are all subject to labour conditions including fair wages schedules based on the rates current in the district where the work is being executed. Provision is made for the observance of working hours of not more than forty-eight per week and for a wage rate of not less than one and one-half times the regular rate for any overtime that is necessary and authorized by the Dominion Government inspector in the plant.

Contracts for the manufacture of equipment and supplies for the defence forces are subject to the "B" labour conditions of the Fair Wages Order in Council referred to in the introduction to this article.

As complete lists of the contracts awarded by the War Supply Board are being issued weekly through the office of the Director of Public Information, and are being published in the press, this information will not be duplicated here. Particulars of the contracts which have

been awarded recently by various other departments of the Government of Canada, however, appear hereunder:—

GROUP "A" CONTRACTS

(1) *Works of Construction, Remodelling, Repair or Demolition*

Note: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provided that "Where by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work, and also specify that the rates of wages set out therein are *minimum* rates only and that 'nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation'."

Department of Public Works

Construction of a survey launch at Vancouver, B.C. Name of contractors, Vivien Engine Works, Ltd., Vancouver, B.C. Date of contract, February 24, 1940. Amount of contract, $5,397.84. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmith	$0 75
Blacksmith's Helper	0 56½
Caulker (wood)	0 86
Electrician	0 83
Electrician's Helpers	0 50
Fitters (machine)	0 75
Labourers	0 50
Machinist	0 75
Machinist's Helpers	0 50
Painter	0 75
Shipwright and Joiner	0 83
Sheet Metal Worker	0 85½
Sheet Metal Workers' Helpers	0 50
Welder (acetylene)	0 82
Welder (electric)	0 90
